TABLE OF CONTENTS

Introduction /5/

I. The Avataṃsaka school in East Asia and its central concepts /12/
   1. Famous masters
   2. Central concept: the dharma-dhātu dependent arising
   3. Scriptural basis
   4. Pure and impure dependent arising of dharma-dhātu
   5. Phenomena and principle
   6. Six aspects and ten mysteries
   7. Nature origination
   8. The four dharma-dhātus
   9. The cosmogonic map for Buddhist practice

II. The base text: The Buddhāvataṃsaka-sūtra /28/
   1. The history of the Buddhāvataṃsaka-sūtra: shorter and larger Texts /29/
      a. The Buddhāvataṃsaka-sūtra in India
      b. Partial translations before the translation of the larger Buddhāvataṃsaka-sūtra
      c. The sixty-fascicle Huayan jing
      d. The eighty-fascicle Huayan jing
      e. The forty-fascicle Huayan jing
      f. The Sanskrit version
      g. Partial translations after the translation of larger Buddhāvataṃsaka-sūtra
      h. The Tibetan version
      i. Comparing the chapters in the various versions
   2. Huayan texts in Dunhuang /56/
      a. Huayan Buddhism in Dunhuang
      b. The manuscripts of the chapter Baowang rulai xingqi pin 寶王如來性起品 in Dunhuang
      c. Conclusion
   3. Chinese Miraculous Stories about Buddhāvataṃsaka-sūtra /73/
      a. Introduction
      b. The early miraculous stories in Buddhism
      c. Miraculous stories about the Buddhāvataṃsaka-sūtra
      d. Miraculous stories in Huayan exegetical works
III. The Development of Chinese Buddhist commentary-writing: the Chinese exegesis of the Buddhavatamsaka-sutra /84/

1. The characteristic features of commentaries
2. Commentary literature in China
3. Indian Buddhist commentaries
4. The appearance of Chinese Buddhist commentaries
5. The appearance of expounding commentaries
6. The Xuantan
7. Final stage: Tang period (618-907)
8. Hermeneutical methods
9. Impact of indigenous thought on exegesis

IV. The Yogacara and Tathagatagarbha teachings in the Buddhavatamsaka-sutra and the Huayan school /111/

1. The reception of Yogacara in China and its position in Huayan panjiao /112/
   a. Background: old and new schools of Yogacara in China
   b. The position of Yogacara in panjiao of Huayan

2. Passages connected to Yogacara and Tathagatagarbha in the Buddhavatamsaka-sutra /116/
   a. “Three realms are mind only” /116/
      i. The original passage
      ii. Interpretations of the passage
   b. The Metaphor of Painter /121/
      i. Antecedents of the painter metaphor
      ii. Translation and interpretation of the Mind-only Poem
      iii. Conclusion
   c. The metaphor of the great sutra /142/

3. Faxiangzong versus Faxingzong /148/
   a. The Origin and Meaning of Faxiangzong and Faxingzong /148/
      i. Introduction
      ii. Faxiangzong as Yogacara in Fazang’s works
      iii. The interfusion of xing and xiang in Fazang’s works
      iv. Ten differences between faxingzong and Faxiangzong
      v. One vehicle of faxing
      vi. Conclusion: is Huayan Faxingzong?
b. A Debate between Faxingzong and Faxiangzong on the nature of Buddha’s mind /171/
   i. The original passage in the Buddhavatamsaka-sutra
   ii. Chinese interpretations
   iii. Conclusion
   iv. Outline of the text
   v. Translation

4. Huayan synthesis of Yogacara and Tathagatagarbha /197/
   a. Ten Levels of Consciousness-only in Huayan Buddhism /197/
      i. The original concept propounded by Fazang
      ii. Chengguan’s modification
      iii. Zongmi’s modification
      iv. Conclusion
   b. Nature Origination: the manifestation of Absolute in the phenomenal world /219/
      i. Nature origination in Huayan studies
      ii. The meaning of nature origination in the sutra
      iii. The nature origination in early Huayan exegesis: Zhiyan
      iv. The nature origination in classical Huayan exegesis: Fazang
      v. The Huayan exegesis of nature origination under Chan influence: Chengguan

V. Faith and Practice in the Buddhavatamsaka-sutra and Huayan school /242/
   1. “Faith” in Buddhism
   2. Faith and the Buddhavatamsaka-sutra
   3. Fifty two stages
   4. Faith is complete enlightenment
   5. Enlightenment at the stage of faith in Huayan Buddhism
   6. The four models of cultivation and enlightenment
   7. Li Tongxuan: faith in the identity of sentient beings and buddhas
   8. Conclusion

VI. Appendixes /264/
   1. Buddhist and non-Buddhist works cited in Chengguan’s commentary and subcommentary /265/
   2. Critical edition of the Tibetan version of the chapter Tathagata’s mind of the sutra Manifestation of the Tathagata /280/

VII. Bibliography /317/
   1. Primary sources /318/
   2. Secondary sources /321/
I defended my PhD thesis at the Hungarian Academy of Sciences in 1997. I studied the biography of the fourth patriarch of the Huayan school of Chinese Buddhism, Chengguan, and his central philosophical concept, the theory of the four dharma-dhātu. I chose this eminent monk because his biography and teachings had received very little scholarly attention in the west. I carefully collated all extant accounts of his life, and wrote his critical biography. My study on his biography was published separately in English under the title *A Religious Leader in the Tang: Chengguan’s Biography* by The International Institute for Buddhist Studies in Tokyo. This book has become the standard work of reference on Chengguan in international Buddhist studies, and is regularly cited in works on Chinese Buddhism.

However, it was very clear for me that the scope of my investigation was somewhat narrow in terms of research into the school of Huayan Buddhism, which is regarded as one of the scholastic schools of Chinese Buddhism that flourished under the Tang dynasty. Its patriarchs were influential monks in Chinese society who not only contributed to the development of Chinese Buddhism but also had a considerable impact on the intellectual and political life of China. They were very prolific, writing numerous essays and commentaries which became the legacy of Chinese Buddhism, which has distinct features compared by Indian Buddhism. At the same time Huayan monks were on good terms with rulers and high-ranking officials who were the major contributors to the economic wealth and prestige of the Chinese Buddhist community in Chinese society.

The Huayan school gained its name from the Buddhāvataṃsaka-sūtra, a voluminous Mahāyāna sūtra which was translated under the title *Huayan jing*. The patriarchs of the school regarded this sūtra as the ultimate or most perfect teaching of the Buddha; thus they wrote commentaries on this scripture and interpreted its tenets very extensively. After I had defended my thesis my main research orientation was the study of this great Mahāyāna sūtra and the way in which the Huayan monks understood its teachings. However, once again the topic is too large and complex: a thorough study would require several life-times. In order to limit the scope of this study I focused my research on two central concepts of Buddhism, the ālayavijñāna and the tathāgatagarbha. The ālayavijñāna is the eighth consciousness in Yogācāra Buddhism, which is said to preserve the karma seeds that can be activated under certain conditions and create the outside world. The tathāgatagarbha is the essence/nature of the Buddha inherent in all living beings that enables them to become Buddha in the future.
The Tathāgatagarbha\(^1\) teachings cannot be attributed to a separate school; they often appear along with Yogācāra concepts in Yogācāra scriptures. However, the Chinese Buddhist scholars are regarded as a distinct school. The relationship between ālayavijñāna and tathāgatagarbha is not very clearly defined or is even ambiguous in Indian Buddhist sources. This problem definitely perplexed Chinese Buddhist thinkers, who attempted to find the ontological source of existence on the basis of their own indigenous tradition. In this thesis I will show how these concepts are or seem to be reflected in the Buddhāvataṃsaka-sūtra and how these passages related to ālayavijñāna and tathāgatagarbha are interpreted in the exegetical tradition of Huayan Buddhism. In addition, I study those Huayan tenets that were formulated on the basis of Yogācāra and Tathāgatagarbha teachings.

Chapter I is an introduction to the history and philosophy of the Huayan school, which gives the background and the context of my main object of research in this thesis. I show that Huayan Buddhism was not only a school of Chinese Buddhism but also exerted considerable influence in East Asia. We find eminent monks in Korea and Japan who adopted Huayan teachings and contributed to the development of Huayan theory and practice. In addition, I introduce the main Huayan tenets i.e. dependent arising of dharma-dhātu, phenomena and principle, six aspects, ten mysteries, nature origination, the four dharma-dhātus and the cosmogonic map for Buddhist practice. The concepts of ālayavijñāna and tathāgatagarbha often appear in these Huayan tenets, which reveals that these concepts played a crucial role in formulating the distinct Huayan tenets.

Chapter II is a study of various aspects of the base text of my research, the Buddhāvataṃsaka-sūtra. Given that all Huayan tenets are supposed to originate from this sūtra, it is important to know the history of its compilation. The first section gives an account of different versions of this scripture, the shorter and larger ones. Some chapters of this sūtra were translated and circulated as independent sūtras before and after the two Chinese and one Tibetan larger versions appeared. The larger version could be finalised by expanding one of the independent sūtra, entitled The fundamental activity of a bodhisattva as related by Buddha (Fo shuo pusa benye jing 佛說菩薩本業經). This sūtra can be called a proto-Buddhāvataṃsaka-sūtra. I compare the chapters of the three larger versions, and make it clear that new chapters were added to the sūtra in the later translation. It is important to note that the larger version has not survived in Sanskrit and the Indian Buddhist literature does not cite

---

\(^{1}\) I write tathāgatagarbha with a small initial letter if it means the concept of Buddha-nature, but I use a capital letter if it refers to this teaching as a school, even if it cannot be identified as a separate school.
this version, thus it is highly likely that *Buddhāvatamsaka-sūtra* was compiled in Central Asia, probably in Khotan.

The eastern end of the Silk Road which crossed Central Asia was Dunhuang, a flourishing city in terms of trade and various religious traditions. The caves of Dunhuang preserved the memory of this flourishing culture, as wall paintings reveal the development of Buddhism in this region, and the hidden library provide us with an invaluable source of the literary tradition of this city. The *Huayan jing* must have been very popular in Dunhuang as the library preserved numerous copies of this scripture. As in the cases of other popular sūtras, the *Huayan jing* served a votive purpose attested by the surviving colophons of these manuscripts. Dunhuang manuscripts are precious sources for philological collation of texts. I selected the chapter *Baowang rulai xingqi pin* 寶王如來性起品, which is a very important text related to the Tathāgatagarbha teaching that I studied in my thesis, to compare the Dunhuang manuscripts with the received text preserved in the Taishō edition of the Chinese Buddhist Canon. Although we cannot find very significant alterations, this collation reveals important features of sūtra copying as a religious practice.

Dunhuang manuscripts prove that *Huayan jing* was often copied by pious believers who expected this scripture to have miraculous effects and to guarantee the well-being of the copyist or the donor and his/her family in this or later lives. The miracles related to a sūtra created a special genre of literature called “miraculous stories”. The earliest extant collection of miraculous stories related to the *Huayan jing* is the *Account of Stimuli and Responses Related to Buddhāvatamsaka-sūtra* (*Da fangguang fo huayan ganying zhuang* 大方廣佛華嚴經感應傳), compiled shortly after 783 by Hu Youzhen 胡幽貞 (?-783+). Huayan scholars in their commentaries also included these miraculous stories. Chengguan establishes six categories of circumstances under which these miracles were experienced: 1. translation (*fanyi* 翻譯), 2. writing commentary (*zaolun* 造論), 3. copying (*shuxie* 書寫), 4. recitation (*dusong* 讀誦), 5. meditation (*guanxing* 觀行), and 6. interpretation (*jiangshuo* 講說).

The Chinese commentaries on the *Huayan jing* are my main sources in the study of Huayan interpretation of the concepts of *ālayavijñāna* and the *tathāgatagarbha*. Chapter III discusses the development of Chinese Buddhist commentary-writing, thus providing the context and background of Chinese commentaries on *Huayan jing*. The commentary is a very important genre in Asian cultures: interpreting the ancient texts is an essential intellectual vocation. To understand the characteristics of Chinese Buddhist commentary-writing we have to study both the Indian Buddhist and the Chinese approaches. In Chinese Buddhism there are
After setting the framework of our research by introducing the Huayan school in East Asia, the history of *Buddhāvatamsaka-sūtra*, and the tradition of commentary-writing in Chinese Buddhism, I focus on the concepts of *ālayavijñāna* and *tathāgatagarbha* in Chapter IV, which is divided into four sections. The first gives an account of the reception of Yogācāra teachings in China. The first schools of Yogācāra were the Dilun and Shelun schools, thus they are known as the “old schools” of Yogācāra. These schools inspired by the Tathāgatagarbha teachings agreed that reality can be traced back to an absolute pure source, and claimed that all sentient beings are endowed with Buddha-nature; thus all of them can become Buddha. The appearance of the apocryphal scripture *Awakening of Faith in Mahāyāna*, which offers a solution for harmonising Yogācāra and Tathāgatagarbha teachings, can be related to these schools. However, Xuanzang 玄奘 (600-664), who mastered the authentic Yogācāra teachings in India, challenged the old schools. He accepted neither the existence of a final pure reality, nor the universality of Buddha-nature. His school is called the new school of Yogācāra. The second patriarch of the Huayan school, Zhiyan 智儼 (602-668) defended the achievements of the old schools and criticised Xuanzang’s teachings. This is reflected in his system of Buddhist teachings (*panjiao* 判教), where he ranked Yogācāra as the elementary teaching of Mahāyāna, while Tathāgatagarbha was the advanced teaching of Mahāyāna.

Section two shows those passages in *Buddhāvatamsaka-sūtra* and its Huayan interpretations that are or are supposed to be related to Yogācāra and Tathāgatagarbha teachings. In order to understand the original meaning more clearly I compare the Tibetan texts with the Chinese versions. The most famous slogan that is also connected to Yogācāra by Indian authors is the claim that “the three realms are mind only;” however, it is not certain that the *sūtra* refers to Yogācāra. The next passage that is linked to Yogācāra is a poem that describes mind as a painter. Here, again, it is dubious whether the *sūtra* really explicitly involves Yogācāra teachings. The Huayan commentators used the *Awakening of Faith in Mahāyāna* to interprete this poem. The third passage referred to as the metaphor of great *sūtra* is regarded as a precursor of the Tathāgatagarbha teachings. It says that all sentient beings possess the wisdom of the Tathāgata but due to their false thinking they cannot realise it.

After the interpretation of these three passages, in section three I turn my attention to the position of Yogācāra and Tathāgatagarbha teachings in Huayan Buddhism. The *panjiao*
was one method to relate these teachings. Another method was the usage of two terms Faxiangzong and Faxingzong. The term Faxiangzong was created by Fazang to denote the Yogācāra teachings of Xuanzang, while Faxingzong was formulated by Chengguan to include both Tathāgatagarbha and Madhyamaka teachings. However, I show that Faxiangzong and Faxingzong are more properly interpreted as principles and not as schools, as has been suggested by others. One passage in the sūtra about the nature of the Buddha’s mind is quite ambiguous. I show how Chengguan interprets this passage in the context of Faxiangzong and Faxingzong. He introduces the two views on this topic: Faxiangzong propounds the pure existence of the Buddha’s mind while Faxingzong denies any kind of existence of the Buddha’s mind, as only tathatā exists on his level. Chengguan finally proposes the Huayan understanding of this problem, which is the non-obstruction of the existence and non-existence of Buddha’s mind. I provide the outline (kepan 科判) of this short essay within the commentary. The kepan is a Chinese exegetical innovation to structure the original text that is being commented upon. I include the translation of Chengguan’s commentary and subcommentary on this passage.

Section four gives an insight into how the Yogācāra and Tathāgatagarbha teachings were juxtaposed under one rubric in Huayan Buddhism, thus arriving at a synthesis of these tenets. The teaching of ten levels of Consciously-only was originally propounded by Fazang, but was modified by Chengguan and Zongmi. It starts from the classical Yogācāra theory that perception can be divided into a perceiving subject, mind and perceived objects evolved out of mind. Fazang shows that this duality of perception can be deconstructed step by step, first arriving at ālayavijñāna on the fourth level, and then at tathāgatatagarbha on the fifth level. On the sixth level the process of reconstruction starts by stating that all phenomena evolve out of the pure Absolute. The next four levels describe the world that can be traced back to a pure entity using Huayan terms. These phenomena are identical with the Absolute, mutually included, identical with each other, and interdependent. I show that later patriarchs, Chengguan and Zongmi significantly modified Fazang’s theory in order to emphasise their own philosophical and religious conviction. The other important Huayan innovation is the tenet of nature-origination. This term can be found in the title of a chapter of the 60-fascicle Huayan jing, the Nature Origination of the Jewel King Tathāgata. Thus this chapter, as we saw above, teaches that living beings inherently possess the Buddha’s wisdom. Although the word tathāgatagarbha cannot be found here, this chapter was circulated as an independent sūtra before the compilation of the Huayan jing and can be regarded as a precursor to the Tathāgatagarbha teachings. Although the word nature is a Chinese interpolation, the term
nature-origination became very important in Huayan philosophy. I compare the Chinese and the Tibetan occurrences of this term in the *Huayan jing* and study its original meaning in the scripture. I show how the term nature-origination was elaborated by the Huayan patriarchs. I make a very clear parallel between the *sūtra* and the Huayan tenet of nature-origination. Nature-origination describes how the world of phenomena evolves out of the Absolute. This is very close to the original intent of the *sūtra* which shows how the Tathāgata, the representation of the Absolute world, becomes manifested in the world of phenomena in order to teach living beings and help them to leave the world of suffering.

The issue of how to leave the world of suffering is intimately related to the question of religious practice which is treated in chapter VI. The *Buddhāvatamsaka-sūtra* is said to describe the religious practice in fifty two stages, starting from initial faith up to complete enlightenment. It provides a gradual path to enlightenment. However, one passage of the *sūtra* says that at the stage of initial faith the bodhisattva experiences complete enlightenment. This sudden enlightenment seems to be in contradiction with the gradual path of fifty two stages. Fazang and Chengguan solved this contradiction by explaining the stages from two aspects: gradual (*cidi xingbu* 次第行布) and mutual interfusion (*yuanrong xiangshe* 圆融相摄). Chengguan, influenced by Chan Buddhism, proposed four models of cultivation and enlightenment. He emphasised the importance of gradual cultivation even after the sudden enlightenment, which became the standard model for his disciple Zongmi. The famous Huayan lay hermit Li Tongxuan stressed the importance of faith in the identity of living beings with Buddha. His teaching had a great impact on the development of Chan Buddhism.

At the end of my thesis two appendixes can be found. The first is a list of the works that Chengguan cites in his commentary and subcommentary. This list sheds light on a commentator’s erudition during the Tang period. It proves that a commentary can transcend the scope of a mere explanation of a scripture: by incorporating the Buddhist and non-Buddhist knowledge of its age it can become a Buddhist encyclopaedia. The other appendix is a sample of the diplomatic edition of the Tibetan text of the chapter Manifestation of the Tathāgata, which is referred to frequently in my thesis. I have been working on this project for several years, and I compared the following editions of the text: London, Berlin, Derge, Kawaguchi, Lhasa, Narthang, Nyingma, Peking, Phug brag, Stog. The whole edition is about two hundred pages, thus here I provide only the famous passage on the inherent existence of Tathāgata’s wisdom. This edition of the Tibetan text will be published by the International
Institute for Buddhist Studies in Tokyo. I would like to express my gratitude to Dr. Erzsébet Tóth for her assistance in editing the text.
II. The Avatamsaka school in East Asia and its central concepts
1. Famous masters

The Huayan school is a special East Asian form of Buddhism that reflects the East Asian understanding of Indian Buddhism; it took its name from the *Buddhāvatamsaka-sūtra*, which was translated into Chinese under the title of *Huayan jing*. This school is famous for its elaborate metaphysical and ontological system of thought, which exerted a great influence on the later development of Chinese Buddhism and Chinese philosophy. Even Chan Buddhism, known for its emphasis on meditation and practice, is indebted to the profound philosophy of Huayan Buddhism, which entails a special insight into the world of phenomena from the perspective of an enlightened being. The masters of this school were prominent figures of society who became the teachers of rulers and aristocrats, and thus played an important role in the social and religious world of East Asia.

The Huayan school flourished in China during the Tang dynasty (618-907), when the five patriarchs of the school lived. The lineage of five patriarchs was established during the Song period (960-1279). They were Du Shun 杜順 (557-640), Zhiyan 智儼 (602-668), Fazang 法藏 (643-712), Chengguan 澄觀 (738-839) and Zongmi 宗密 (780-841). Du Shun and Zhiyan represent the early period when the basic ideas and concepts of Huayan philosophy were formulated. In the classical period, Fazang further elaborated and systematised the innovations of the early period. In the late period indigenous Chinese thought and Chan Buddhism had a considerable impact on Huayan philosophy.

Du Shun is regarded as the first patriarch of the Huayan school; according to his biographies he did not focus on the exegetical study of the scriptures, especially of the *Buddhāvatamsaka-sūtra*, but became famous as a miracle-worker. When Zhiyan was twelve years old, Du Shun accepted him as his disciple. He also studied under masters of the Dilun and Shelun schools. After receiving a broad education in Buddhist literature, he chose *Buddhāvatamsaka-sūtra* by chance as his major text to study. Dissatisfied with the earlier interpretation, he formulated his own, including such features as the ten mysteries. Fazang, the third patriarch of the Huayan school, under the patronage of Empress Wu Zetian 武則天 (r. 690-705), was able to increase the influence of Huayan school in Chinese society. Nonetheless, he was not only a philosopher but also played an important role in the political-
religious struggles of his age and was involved in all kinds of religious activities. Chengguan studied under various Buddhist masters, and thus accumulated a vast knowledge of Buddhist doctrine and practice that he used to interpret the teaching of the *Buddhāvatamsaka-sūtra* in his commentaries. Zongmi was not only the patriarch of the Huayan school, but also of the Chan school, thus he created a synthesis of these two schools.

Another famous master of the Huayan school was Huiyuan 慧苑 (673-743), Fazang’s disciple, who was severely criticized by Chengguan because he had modified Fazang’s system too radically. Supposedly, it was because of this criticism that he could not become part of the orthodox Huayan lineage. The other eminent figure of Huayan Buddhism is Li Tongxuan 李通玄 (635-730), the lay hermit who gave an original explanation of the sūtra. He emphasized meditation on the light emanating from Buddha. Li Tongxuan had a considerable impact on Song Buddhism. During the Song dynasty there was a revival of Huayan studies by the so-called “four masters” (Daoting 道亭, Shihui 師會 (1102-1166), Xidi 希迪, Guanfu 觀復), but their main contributions were the commentaries on the works of Tang masters that they wrote.

The Huayan school spread to Korea and Japan. Üisang 義湘 (625-702), a monk of Silla, went to China and studied Huayan under Zhiyan. He kept up his friendship with his fellow disciple Fazang after his return to Korea, as is reflected in their correspondence, which has survived. He founded the Hwaŏm school in Korea, and established several monasteries to spread the Hwaŏm teachings. His most famous work is the *Diagram of Dharma-dhātu according to One Vehicle of Hwaŏm*. The other eminent scholar in Korea was Wŏnhyo 元曉 (617-686), who did not formally join the Hwaŏm school but was strongly influenced by its ideas. His commentary on the *Awakening of Faith* has become a very influential work in East Asian Buddhism. Chinul 知訥 (1158-1210) created a synthesis of Hwaŏm theory and Sŏn practice, which became normative in Korean Buddhism, with the result that Hwaŏm philosophy still plays an important role in Korean Buddhism.

Huayan (*Kegon* in Japanese) teaching was introduced to Japan by the Korean monk Simsang 寫祥, who gave a lecture on *Huayan jing* to Emperor Shōmu 聖武 (r. 724-749) in 740. Rōben 良辯 established the Kegon school as one of the eight schools of Nara Buddhism. Under the influence of Huayan Buddhism Emperor Shōmu ordered the casting of a statue of

6 Forte 2000.
Vairocana Buddha, the principal Buddha of Huayan Buddhism, which was consecrated in the Tōdaiji temple in 752. Subsequently, the temple became the centre and the symbol of Kegon Buddhism. Two famous Kegon monks of the Kamakura period (1185-1333) were Myōe Kōben 明恵高弁 (1173-1232) and Gyōnen 凝然 (1240-1321). Li Tongxuan’s writings on the meditation on Buddha’s light strongly influenced Myōe, who was trained as a Shingon monk. His temple, Kōzanji 高山寺, in the outskirt of Kyoto became the centre of Kegon Buddhism. Gyōnen was a Kegon monk of great erudition, he was also well versed in the teachings of other schools. His Outline of the Eight Schools, which provides a summary of the doctrines of the major Japanese Buddhist schools, has remained a popular book to the present day.

2. Central concept: the dharma-dhātu dependent arising

One of the best-known concepts of Huayan Buddhism is dharma-dhātu dependent arising. Buddha originally taught the doctrine of dependent arising (pratītyasamutpāda) to show the cause of suffering, which is ignorance, and to explain how to eliminate it. In Abhidharma philosophy it became the law that coordinates the existence of dharmas, but in Madhyamika, which denied the real existence of dharmas, it served as a proof for their emptiness. According to Fazang, the third patriarch of the school, the doctrine of dependent arising became ever more perfected from Hīnayāna to Huayan. The four stages of its development are: 1. karma causation (yegan yuanqi 業感緣起); 2. ālayavijñāna causation (laiye yuanqi 頼耶緣起); 3. tathagātagarbha causation (rulaizang yuanqi 如來藏緣起); 4. dharma-dhātu dependent arising (fajie yuanqi 法界緣起). The famous metaphor of the dharma-dhātu dependent arising is Indra’s net, which is described by Francis Cook as follows:

Far away in the heavenly abode of the great god Indra, there is a wonderful net which has been hung by some cunning artificer in such a manner that it stretches out infinitely in all directions. In accordance with the extravagant tastes of deities, the artificer has hung a single glittering jewel in each "eye" of the net, and since the net itself is infinite in dimension, the jewels are infinite in number. There hang the jewels, glittering like stars in the first magnitude, a wonderful sight to behold. If we now arbitrarily select one of these jewels for inspection and look closely at it, we will discover that in its polished surface there are reflected all the other jewels in the net, infinite in

---

7 Lai 1977:248-259
number. Not only that, but each of the jewels reflected in this one jewel is also reflecting all the other jewels, so that there is an infinite reflecting process occurring.\(^8\)

The dependent arising of \textit{dharma-dhātu} is a Sinitic understanding of the theory of Buddhist causation, which cannot be found in Indian Buddhism; however, the main scripture of the Huayan school, the \textit{Buddhāvatamsaka-sūtra}, includes similar ideas that were interpreted by the Chinese Huayan masters as the teaching of \textit{dharma-dhātu} dependent arising. The Huayan masters meticulously explained these passages, and created their own description of the world where the practitioners live and the realm of Buddhas and Bodhisattvas that is attained through spiritual cultivation. They formulated tenets such as the ten mysteries, the identity and interpenetration of phenomena, nature origination, the four \textit{dharma-dhātu}s and so on in order to reveal the hidden relationship among phenomena and to show their origin. However, all these theoretical constructs are not only intended to provide a description of the phenomenal world, but also have profound consequences for spiritual cultivation and the realization of enlightenment. The final goal is to trace back the pure source of all phenomena; that is, to achieve the pure mind through Buddhist practice. Once this state has been attained the practitioner, who in that moment becomes enlightened, spontaneously gains an insight into the \textit{dharma-dhātu}, which is the true way in which all phenomena exist. In addition, when formulating the theory of \textit{dharma-dhātu} in Chinese Buddhism, the influence of indigenous Chinese thinking also must be taken into consideration.

### 3. Scriptural basis

The \textit{Buddhāvatamsaka-sūtra} is one of the most voluminous Mahāyāna \textit{sūtra}; its English translation is about 1500 pages long.\(^9\) This scripture is regarded as the most perfect description of the truth realized by Buddha in his enlightenment under the bodhi tree. The first scene of the \textit{sūtra} is the very moment Buddha reached enlightenment, when flowers and jewels are raining from the sky while innumerable bodhisattvas, spirits, and other creatures arrive to praise his supernatural capacity to appear in the world in all kinds of ways to teach the \textit{Dharma}. Next, Buddha, not leaving his original place under the bodhi tree, is able to manifest himself in a second location, and next, without moving from the first two locations he appears in the third place. This is repeated in seven locations. He teaches in three human places (the place of enlightenment, the Hall of Universal Light, Anātha-piṇḍa-dasyārāmaḥ)

\(^8\) Cook 1977: 2  
\(^9\) Cleary 1993
and four heavenly realms (the heavenly realm of thirty-three gods on the Peak of Sumeru, the palace of the god Suyāma, Tuṣita, the Palace of Paranirmita-vaśavartin). This multiplication of the Buddha might have affected the title of the sūtra. As Ōtake Susumu showed, the term buddhāvatamsaka meant the miracle that Buddha performed in his contest with the heretic teachers: the miraculous multiplication of his body. This title underlines the profoundly visual and imaginative nature of the text. In the sūtra Buddha preaches in these seven locations, but in fact, he teaches through bodhisattvas who gain empowerment through light emitted from the Buddha.

Today there are three major versions of the Buddhāvatamsaka-sūtra: the first Chinese translation, which came to be called the sixty-fascicle Huayan jing and was made by Buddhhabhadra in 421, the second Chinese translation, the eighty-fascicle Huayan jing, translated by Śikṣānanda in 699, and the Tibetan translation, completed in the first quarter of the ninth century by two Indian masters, Jinamitra and Surendrabodhi, as well as the Tibetan master Ye-shes-sde. The texts of these three major versions are not identical, as new chapters were added to the later translations, and the division of chapters also differs. However, several chapters of this major sūtra were circulated independently before the appearance of the whole translation, and some chapters, probably due to their popularity, were translated again as independent sūtras after the translation of the whole sūtra.

The chapters of the sūtra revolve around two central topics: the eulogy of Buddha's abilities and his appearance in the world as a teacher, and the description of the bodhisattva's career. The two most famous chapters of the sūtras, the Daśabhūmika-sūtra and the Gaṇḍavyūha-sūtra, which are preserved in Sanskrit, are concerned with the second theme. The Daśabhūmika-sūtra describes the bodhisattva's path from his/her vow to liberate all living beings from suffering to enlightenment in ten stages (1. happiness, 2 detachment from defilements, 3. emitting light, 4. radiant wisdom, 5. difficult to overcome, 6. presence, 7. distant journey, 8. not moving, 9. excellent wisdom, 10. dharma-cloud). The Gaṇḍavyūha-sūtra depicts the spiritual quest of a young boy named Sudhana, who visits fifty-three spiritual friends from all walks of life. Finally he enters the tower of Maitreya, where he has an insight into the realm of reality. Another important chapter of the sūtra describes the Lotus-womb realm, which is the pure land of Vairocana Buddha. Like the earth in Buddhist cosmology, the ocean of this pure land depends on wind-circles, and a giant lotus flower, which includes this pure land, grows out of this ocean; this is why it is called Lotus-womb

---

10 Ōtake 2007  
11 Hamar 2007
realm. This world is square, flat, surrounded by diamond mountains, inhabited by living beings. The realm includes innumerable Buddha-lands, and the sūtra lists the names of some lands, oceans and Buddhas. In this way this Lotus-womb realm itself reaches cosmic dimensions. This chapter played a key role in establishing Huayan religious practice, as a society of believers took a vow to be reborn in the Lotus-womb realm.

4. Pure and impure dependent arising of dharma-dhātu

Zhiyan summarises the dependent arising from two points of view. The first is the explanation of dependent arising from the perspective of ordinary defiled dharmas, and the second is the treatment of dependent arising from the perspective of the pure bodhi. This interpretation seems to be in harmony with the early tenet of dependent arising, which describes how suffering originates from ignorance and how liberation from the chain of saṃsāra can be attained through the elimination of ignorance.

Defiled dependent arising has two aspects: 1. dependent arising of one-mind (yuanqi yixin 緣起一心), and 2. support of one-mind (yichi yixin 依持一心). The dependent arising of one-mind is divided into three aspects. The first of these, the dependent arising of absolute and false (zhenwang yuanqi 真妄緣起) shows the lack of distinction between absolute and false while the ālayavijñāna creates the phenomenal world. The second aspect, inclusion of fundamental into derivative (sheben congmo 收本從末), emphasizes the process through which the ālayavijñāna creates the phenomenal world, while the third aspect, inclusion of derivative into the fundamental (shemo congben 收末從本), underlines the existence of absolute mind behind the phenomenal world. The meaning of the other aspect of the defiled dependent arising, "support of one mind" is that the six and the seventh consciousnesses are formed on the basis of ālayavijñāna.12

While the dharma-dhātu impure dependent arising elaborates the manifestation of the phenomenal world from the pure mind, the dharma-dhātu of pure dependent arising describes how one can achieve the pure source that created all phenomena. Pure dependent arising has four aspects: 1. innate (benyou 本有), 2. innate and generated by cultivation (benyou xiusheng 本有修生), 3. generated by cultivation (xiusheng 修生), 4. generated by cultivation

---

12 Da fangguang fo huayan jing shouxuan fenqi tongzhi fanggui 大方廣佛華嚴經搜玄分齊通智方軌, CBETA, T35, no. 1732, p. 63, b1-c6.
and innate (xiusheng benyou 修生本有). In terms of early Buddhism, pure dependent arising is the reversal of the twelve members of dependent arising, the cessation of suffering through awakening. The first aspect, innate awakening, means that the essence of this pure dependent arising is ineffable. All living beings are endowed with the Buddha-nature; that is, they all have the capacity to become Buddha. The second aspect shows that pure dharma are not only innate but can also be generated by religious cultivation. Even if this practice is based on various conditions, and thus cannot be absolute like the innate Buddha-nature, the wisdom realized through this practice is closely associated with absolute nature, and in this sense we cannot say that that something new is born out of cultivation. The third aspect refers to all those pure dharmas, like faith, that are generated by religious cultivation. In contrast with the previous aspect, where the goal of practice, i.e. realization of wisdom and its relationship with the original enlightenment, are discussed, here the pure dharmas generated before the attainment of enlightenment are emphasized. The fourth aspect reveals that even if living beings are endowed with tathāgatagarbha, they are not aware of their great capacities. In this respect, the Buddha-nature is so well hidden that it seems to be not existent. Only when non-discriminating wisdom is realized after cultivation does this hidden absolute nature become manifested.

As we saw above, here Zhiyan meticulously studied various aspects of the innate buddha-nature and the enlightenment realized by cultivation. He states that in the Daśabhūmika-sūtra only the aspects "generated by cultivation" and "generated by cultivation and innate" are introduced, while the other two aspects, which underline that buddha-nature is innate and the wisdom realized through practice is not different from buddha-nature, are represented in the chapter Nature-origination of Tathāgata (Manifestation of Tathāgata). Here Zhiyan touches upon a very important topic in Mahāyāna Buddhism that is often discussed in Chinese Buddhism. If all living beings are endowed with Buddha-nature, i.e. they are enlightened from the beginning, why should they bother about any kind of spiritual cultivation? If Buddhahood is attained, there is nothing to be attained, thus they do not need any kind of religious cultivation. In the Chan movement this kind of rhetoric can be found, but the scholastic Huayan school took a very clear stance on the issue. Spiritual cultivation is necessary, it cannot be given up because of the inherent Buddha-nature. First of all, Zhiyan makes it very clear that the tathāgatagarbha is only latent, and cultivation is the way to make it visible and efficacious. The other question raised by Zhiyan is the relationship between the

---

inherent Buddha-nature and wisdom realized through cultivation. Even if Zhiyan seems to credit the original enlightenment with a higher position, he argues that wisdom which grows out of the phenomenal world in fact shares the same nature with original enlightenment.

5. Phenomena and principle

Du Shun’s main philosophical contribution to Huayan Buddhism is elaborated in his work entitled *Discernments of the dharma-dhātu of the Avatamsaka* (*Huayan fajie guanmen* 華嚴法界觀門). This essay is divided into three sections: 1. Discernments of true emptiness (*zhenkong guanfa* 真空觀法), 2. Discernment of the mutual non-obstruction of principle and phenomena (*lishi wuai guan* 理事無礙觀), 3. Discernment of total pervasion and accommodation (*zhoubian hanrong guan* 周遍含容觀). The first discernment is the explanation of the important Mahāyāna tenet that dharma do not have essential existence, thus they are empty. Here Du Shun refutes three erroneous views regarding the identity of form and emptiness. He states that emptiness is not identical with annihilation, it does not exist as a quality of a thing, and it is not an entity apart from form. Du Shun's final conclusion is that form and emptiness are "non-obstructive". Finally, Du Shun encourages his readers to practice meditation in order to realize the meaning of identity of form and emptiness. This discussion remains within the framework of Indian Buddhist concepts.

However, the second section introduces new nomenclature, the terms phenomena (*shi* 事) and principle (*li* 理). Du Shun explains their relationship from ten aspects: 1. Principle pervades phenomena 2. Each phenomenon pervades principle 3. Phenomena are formed by principle 4. Phenomena can reveal principle 5. Phenomena are sublated by principle 6. Phenomena can conceal principle 7. True principle is identical with phenomena 8. Each phenomenon is identical with principle 9. True principle is not a phenomenon 10. Phenomena are not principle. By introducing these new terms the discussion of Indian Mahāyāna concept gains new perspectives. First of all, the term "principle" lacks the negative connotation of emptiness, which can cause problems during religious practice, and thus provides a more affirmative view of the reality the practitioner is supposed to see. In early Buddhism the theory of dharmas was a useful method to refute the idea that a substantial ego exists behind phenomena. This theory revealed that the dharmas were the ultimate reality, and no

---

14 Gimello 1976b.
substantial ego was to be found. However, Mahāyana Buddhism went one step further and also refuted the existence of dharmas as ultimate reality. Thus it is meaningless to make a difference between the dharmas and the composite of dharmas, as they are both empty, in the sense that they do not have any substantial existence. The substitution of form (rūpa), one of the dharmas, with phenomena very clearly reflects this shift in Mahāyāna philosophy. Not only are the terms redefined, but the relationship between them is also reconsidered. In addition to the identity of the two terms, we learn that they also simultaneously pervade, constitute, reveal, conceal, and abolish each other.

The third section, "Discernment of Total Pervasion and Accommodation" is divided into ten specific discernments: 1. Principle as phenomena 2. Phenomena as principle 3. Each phenomenon subsumes the mutual non-obstruction of principle and phenomena 4. The diffuse and the local are mutually non-obstructive 5. The broad and the narrow are mutually non-obstructive 6. Pervading and including are mutually non-obstructive 7. Containing and entering are mutually non-obstructive 8. Interpenetration is without obstruction 9. Coexistence is without obstruction 10. Universal interfusion is without obstruction. From the third discernment the principle is dropped, and only phenomena are described, underlining that phenomena inherently include principle. In addition, the third discernment also explains the relationship between phenomena by showing that all phenomena are mutually interpenetrated.

6. Six aspects and ten mysteries

Once Zhiyan met a strange monk who advised him to meditate in seclusion on the six aspects (liu xiang 六相) of the Daśabhūmika-sūtra. He accepted this advice, and finally understood all teachings.\(^{15}\) The six aspects is one of the famous Huayan doctrine which depicts the dependent arising of dharma-dhātu. Each phenomenon can contain (zong 總) all others while remaining distinct (bie 別), can be similar (tong 同) to all others while being different (yi 異), it can establish (cheng 成) the whole and can destroy (huai 壞) the whole. This shows that every phenomenon is simultaneously related to every other one in these six ways.

\(^{15}\) Gimello 1976a: 46-56, 130-212.
The other famous concept of Huayan Buddhism is the ten mysterious gates which was elaborated by Zhiyan in his work "Ten mysterious gates of the unitary vehicle of the Huayan". This teaching was developed by Fazang. The foundation of this doctrine seems to be based on the ten principles in "Discernment of Total Pervasion and Accommodation" put forward by Du Shun.

The ten mysteries show the relationship among various dharmas. The last chapter of Fazang's seminal work on five teachings discusses this topic. Fazang first establishes ten pairs of dharmas: 1. teaching and meaning, 2. principle and phenomena, 3. understanding and practice, 4. cause and result, 5. man and dharmas, 6. differences among objects and religious practices, 7. Dharma and wisdom, master and disciple, 8. two kinds of karmic reward of primary (Buddha) and attendants (bodhisattvas). 9. the capacity (of living beings) and the manifestation (of Buddhas and bodhisattvas in accord with capacities), 10. direct and indirect methods of teaching, essence and function. These ten pairs of dharmas totally include the infinite dharmas. Next, Fazang explains the relationship of these pairs from ten perspectives, which he calls ten mysterious gates: 1. simultaneous inclusion and correspondence, 2. one and many are mutually inclusive and different, 3. all dharmas are mutually identical freely, 4. the realm of the Indra's net, 5. subtle dharmas include others through their establishment, 6. hidden and manifested are accomplished simultaneously, 7. all dharmas have the quality of pure and impure, 8. the separated dharmas of ten times are completed variously, 9. excellent establishment of all dharmas through the transformation of consciousness-only, 10. reach understanding about the truth manifested through phenomena.

The first aspect is simultaneous inclusion and correspondence, which is a general feature of the dharmas, while the other nine aspects are particular descriptions. The first aspect shows that all dharmas simultaneously correspond to and include each other without any confusion. The second aspect is that the one and many mutually contain each other yet they are different. As the second aspect emphasizes that the dharmas can penetrate into each other (xiangru 相入), the third aspect underlines the identity of dharmas (xiangji 相即). The fourth aspect is the realm of the Indra net which is the symbol of the infinite relations among dharmas. In fact this fourth aspect does not add any new content to the first three aspects, but clarifies them using the well-known symbol from Buddhist literature. The fifth aspect shows that subtle and tiny dharmas can contain all other dharmas and they play an important role in establishing all other dharmas. Just as a single thought instant can include all dharmas, or the
tip of a single hair can include all Buddha-lands. The sixth aspect reveals that a dharma can be manifested and hidden simultaneously: depending on whether it is regarded from the aspect of determining other dharmas or being determined by other dharmas, it is manifested or hidden. The seventh aspect defines the relationship of dharmas in terms of their pure or mixed nature. As dharmas both contain and are contained they are called "storehouse" (zang 藏). When a dharma determines other dharmas with its essence, it is called pure, and when it is determined by other dharmas, it is called mixed. The eighth aspect extends the principle of mutual interpenetration and identity to the ten times. Past, present and future are each divided into past, present and future, thus we have nine times. The tenth time is their integrity. As dharmas are located in ten times, the principles of identity and interpenetration also apply to the ten times. The ninth aspect underlies the origin of all dharmas which are established through the transformation of consciousness-only. The word excellent confirms the final purity of dharmas as their existence can be traced back to the Absolute mind. Here, Fazang explicitly relates Huayan teaching to the old school of Yogācāra in China, which argued for the universal existence of immaculate consciousness. The final aspect shows that the practitioner can gain insight into the final reality by understanding that all dharmas originate from Absolute mind.

The ten aspects explained above are called the "old ten mysteries" (gu shixuan 古十玄), as Fazang later made some alterations to the the names and order of the gates, which came to be known as the "new ten mysteries" (xin shixuan 新十玄). He dropped the seventh and ninth mysteries, and introduced the freedom and non-obstruction of breadth and narrowness, and the primary and secondary are perfectly bright and embody all qualities. The former is parallel with the eighth mystery in the old mysteries which emphasizes time, while here space is in focus. The latter clarifies that we can select one dharma from the universe and regard it as primary, while all other dharmas are primary. They can change their roles, and thus can have all qualities.

7. Nature origination

As we saw above, the theory of ten mysterious gates described the relationship among dharmas, and even if the ninth gate of the "old ten mysteries" showed that all dharmas ultimately originate from Absolute mind, this aspect was not emphasized in the "new ten
mysteries”. However, another essential Huayan doctrine, nature origination (xingqi 性起), revealed this important feature of phenomenal existence. The term "nature origination" was adopted from the title of the thirty-second chapter of the sixty-fascicle Huayan jing. This chapter relates the Buddha's manifestation in the world. Huayan exegetes gave a special interpretation of this term in their works explaining the meaning of the Buddhāvatamsaka-sūtra. We are going to discuss this topic in details.

8. The four dharma-dhātus

As we saw above, Fazang was concerned with the explanation of phenomenal existence from two points of view. First, he elaborated the harmonious coexistence of phenomena by propounding the tenet of ten mysteries, second he underlined the reason why all phenomena can be identical and interpenetrated, which is their common origination from Absolute mind, depicted by the tenet of nature origination. The fourth patriarch of the Huayan school, Chengguan (738-839) proposed the theory of four dharma-dhātus which is a synthesis of these two theories. The four dharma-dhātus are: the dharma-dhātu of phenomena, the dharma-dhātu of principle, the dharma-dhātu of non-obstruction of phenomena and principle, and the dharma-dhātu of non-obstruction of phenomena. Chengguan explains the four dharma-dhātus in terms of the meaning of "dhātu". He states that the dhātu has two meanings: the first it something that is divided, and the second it is nature. Using the philological analysis of this term, he relates dharma-dhātu to phenomena because they are divided and the principle which refers to Buddha nature or Absolute nature. As this one term includes both meanings, the two meanings intermingle, and this is the dharma-dhātu of phenomena and principle. Then he emphasizes that these two aspects, phenomenal existence and Absolute nature, cannot be separated; they cannot exist without each other. Finally, Chengguan confirms that the dharma-dhātu of non-obstruction of phenomena can be established because all phenomena are endowed with Absolute nature.

Dharma means the upholding law. The dhātu has two meanings: from the aspect of phenomena it means something that is divided (fen 分), because phenomena are divided and different. On the other hand it means the nature (xing 性) from the perspective of the dharma-dhātu of principle, because the nature of the dharmas is immutable. These two [meanings] intermingle, and thus the dharma-dhātu of phenomena and principle comes into being. Phenomena are produced while

18 Hamar 2007.
attached to the principle, the principle is manifested through the phenomena. If the phenomena and
the principle cease to exist together, then both the phenomena and the principle perish. If the
phenomena and the principle arise together, then they are the permanent phenomena and the
permanent principle. The fourth [dharma-dhātu] is the dharma-dhātu of non-obstruction of
phenomena, which means that the principle includes phenomena.19

In Chengguan's time Chan Buddhism had considerable influence on Chinese society and
religious life; he studied under several Chan masters, and this is reflected in Chengguan's
writings. This is the reason for the modification of the dhama-dhātu theory in later Huayan
thought. While Fazang emphasized the mutual identity and interpenetration of all phenomena,
Chengguan and his disciple, Zongmi (780-841), who was not only the fifth patriarch of the
Huayan school but also a patriarch of the Chan school, emphasized the origin of all
phenomena, the Absolute pure source, and its importance in establishing the harmonious
coexistence of all phenomena. As meditation was the essential practice in Chan Buddhism,
Chengguan also elaborated the special Huayan meditation, the Huayan samādhi, by
establishing ten levels of discernment and relating them to the four dharma-dhātus.

1. The marks return to reality
2. Realization of reality by extinction of marks
3. The non-obstruction of marks and reality
4. Marks include things originated
5. Conditionally originated things mutually interfuse
6. Contents of tiny things
7. The mutual identity of one and many
8. The interrelatedness of Indra's net
9. The perfect interfusion of host and guests
10. The equality of result-ocean.20

Chengguan states that these ten levels of discernment contain the four dharma-dhātus. The first and second are the dharma-dhātu of principle, the third is the dharma-dhātu of non-
obstruction of phenomena and principle, the fourth is the dharma-dhātu of phenomena, the

20 Da fangguang fo huayan jing sui shu yanyi chao 大方廣佛華嚴經隨疏演義鈔, T 36, no. 1736, p. 271, a20-23.
fifth to ninth comprise the *dharma-dhātu* of non-obstruction of phenomena and phenomena, the tenth links together the previous four *dharma-dhātus*.

9. The cosmogonic map for Buddhist practice

As we saw above, Chengguan emphasized the metaphysical and ontological aspect of *dharma-dhātu*, and since he borrowed the words and maybe also the concept from the Laozi, indigenous Chinese thinking had a great impact on the meaning of the term *dharma-dhātu*. Zongmi, who was Chengguan's disciple, was indebted to his master in many respects, but also made his own contribution to the development of Huayan Buddhism. First of all he included the non-Buddhist teachings, Confucianism and Daoism, in his own system of classification of teachings (*panjiao* 判教), acknowledging their possible merits on the religious path. In addition, as a patriarch of Chan Buddhism, he underscored the Buddhist practice in Huayan Buddhism, thus he elaborated the *dharma-dhātu* concept from the perspective of Buddhist practice.

Combining Chengguan's concept of one true *dharma-dhātu* and the teachings of the *Awakening of Faith*, he proposed a five-stage theory of phenomenal evolution. This theory explains how the world of defilements, as it is experienced by ordinary people, evolves out of an intrinsically pure and enlightened ontological source. Zongmi's cosmological map, which reveals the ontological basis for all phenomena, serves a sotriological purpose. Buddha taught the twelve-link chain of dependent arising in order to provide a method for practitioners to break free from the bondage of *saṃsāra*. Zongmi propounded his five-stage cosmological process to reach the same aim.

The first stage of the evolution is the ultimate source of all phenomena, the one mind which is also called wondrous mind of perfect enlightenment, and the one true *dharma-dhātu*, terms that originate from the *tathāgatagarbha* concept of Mahāyāna. This is the ontological source of all phenomena, and this is the source to which the practitioner returns through attaining enlightenment. In the second stage, the originally pure mind divides into two aspects: the mind as suchness (*xin zhenru* 心真如) and the mind subject to birth-and-death (*xin shengmie* 心生滅). The first aspect is unchanging, while the second aspect is able to

---

conditionally originate, and thus is able to manifest itself in the phenomenal world. It is an important difference between the Yogācāra propounded by Xuanzang and the Huayan school which was based on the old Yogācāra schools (Dilun 地論, Shelun 摄論). The new Yogācāra school did not accept the tenet that the Absolute, or tathatā has anything to do with the samsāra.\textsuperscript{23} At this point the philosophical question arises of how the intrinsically pure mind becomes defiled. If ignorance is the cause, then where does it come from? Does it have a separate ontological source? The Huayan tradition believes that it does not, but is manifested from the same pure ontological source.\textsuperscript{24} The third stage describes the two modes of ālayavijñāna: enlightened and unenlightened. Pure dharmas originate from the enlightened mode, while impure dharmas are produced from the unenlightened mode. The fourth stage is the three subtle phenomenal appearances, namely activation or the activity of ignorance, the perceiving subject, and the perceived object. The activity of ignorance is the first thought based on the unenlightened mode of ālayavijñāna, which results in the manifestation of consciousness as subject and object. The fifth stage is the six coarse phenomenal appearances, namely, discrimination, continuation, attachment, conceptual elaboration, generating karma, suffering of karmic bondage. The final stage shows how the generation of subject and object leads to the attachment to dharmas, and eventually to all sufferings.

\textsuperscript{23} Lai 1986.

III. The base text: The *Buddhāvatamsaka-sūtra*
1. The History of the *Buddhāvatsaṃsaka-sūtra*: Shorter and Larger Texts

In the Taishō edition of the Chinese Buddhist canon, one can find the *Huayan* section (*huayan bu 華嚴部*) in part two of volume nine as well as in volume ten. It does not merely contain the so-called “original or complete translations” of the *Buddhāvatsaṃsaka-sūtra* (T 278. and T 279., known in Chinese as *benbu 本部*), but also freestanding translations of works corresponding to certain of the chapters in these larger works (referred to in Chinese as *zhipin 支品*), as well as works which do not correspond to any of the chapters but were presumably written under the influence of the *Huayan* works and were thus traditionally considered to be *Huayan*-related works (*juanshu jing 眷屬經*). The Chinese terms *ben 本* (root, origin) and *zhi 支* (branch, descendent) clearly imply that according to the Chinese tradition the freestanding translations originate from a “complete” *sūtra* which is regarded as the revelation of Buddha’s experience of enlightenment under the bodhi tree. However, modern filological investigations, as we will see below, have shown that the larger *Buddhāvatsaṃsaka-sūtras* (T 278. and T 279.) were compiled on the basis of shorter *sūtras*.

The so-called “original translations” are also called abridged version (*lüeben 略本*) since, as legend has it, the primordial *Buddhāvatsaṃsaka-sūtra* was much longer than any of the extant versions. According to this legend, Nāgārjuna (c. second century CE), the founder of the *Madhyamaka* philosophy, brought the *sūtra* into the world from the palace of serpents (*nāga*). The serpents guarded three versions, which the Chinese exegetes call the upper (*shang 上*), middle (*zhong 中*) and lower (*xia 下*) *sūtras*. The longest is the upper version, which consisted of *śloka* identical in number to that of the specks of dust in the great universe and chapters identical in number to that of the specks of dust in the four worlds. The middle version contained 498,800 *ślokas* and 1200 chapters while the

---

25 As of the Sui period (581-618), the catalogues indicate the correspondences between the so-called partial translations and chapters from the larger works. See Fajing’s *法經 Zhongjing mulu 習經目錄* T55, no. 2146, p.119, a11-120a1. and Yancong’s *彥琮 Zhongjing mulu 習經目錄* T55, no. 2147, p. 159, a22-b6.
27 Nāgas played an important role even in early Buddhism. A *nāga* can be a serpent, man or low-ranking god. See Rawlinson 1986: 135-153. According to the Mahāyāna legend, Nāgārjuna visited the *nāgas* and there he discovered the *prajñāparamitā-sūtras*, which had been unknown after Buddha’s death. Williams 1989: 55.
28 The Chinese *jie 偈* and *song 頌* are translations of the Sanskrit *gāthā* and *śloka*. If it is a measure of length, *śloka* is the appropriate Sanskrit term. Gómez 1967: XXV. n. 1.
lower version consisted of 100,000 ślokas and 48 chapters. The upper and middle versions were too difficult for people, so Nāgārjuna brought the shortest version with him. This story was thought to be borne out by the fact that, according to the Dazhi du lun 大智度論, The sūtra of the inconceivable enlightenment (*Acintyavimokṣa-sūtra, Buke siyi jietuo jing 不可思議解脫經) consisted of 100,000 verses. And this sūtra is none other than the last chapter of the Buddhāvatamsaka-sūtra. This legend can be traced back to Jizang 吉藏 (549-613), who had read about it in Nāgārjuna’s biography.

In the first half of this chapter, I wish to examine the translations of the larger Buddhāvatamsaka-sūtra and the freestanding translations of its chapters (T 278-298), while the second half will demonstrate with a chart how the chapters of the larger works and the freestanding translations of the chapters may correspond to one another. I will not cover those works that can be found in the Huayan section but do not correspond to any of the chapters in the Buddhāvatamsaka-sūtra (T 299-309.).

a. The Buddhāvatamsaka-sūtra in India

The Buddhāvatamsaka-sūtra is among the lengthiest of the Mahāyāna sūtras; however, only two chapters have survived in Sanskrit: the Daśabhūmika-sūtra, which describes the spiritual development of a bodhisattva, and the Gaṅdavyūha-sūtra, which relates the search

---

29 We first encounter this with Zhiyan in the Huayan school in his work entitled Huayan jing nei chuangmen deng za kongmuzhang 華嚴經內章門等繾孔目章 T45, no. 1870, p. 586, e23-26. It can also be found in the works of the later patriarchs: Fazang’s Huayan jing zhiqui 華嚴經旨録 T45, no. 1871, p. 593, b10-15, and Huayan jing guanmai yiji 華嚴經關脈義記 T45, no. 1879, p. 656, c1-22, and Chengguan’s Da fangguang fo huayan jing shu 大方廣華嚴經疏 T35, no. 1735, p. 523, a10-22.

30 Dazhi du lun 大智度論, T25, no. 1509, p. 756, b7.

31 Jizang examined why the title of the Buddhāvatamsaka-sūtra does not appear in the text. He explained that only 36,000 of the 100,000 ślokas of the lower version reached China and that the title could only be found in the part that follows, which was not translated into Chinese. See Jingming xuan lun 淨名玄論, T38, no. 1780, p. 863, b19-27. According to Indian custom, the title can be found at the end of the work; it was Daonan 道安 (312-385) who placed it at the beginning of the work in line with Chinese customs See Jingming xuan lun 淨名玄論, T38, no. 1780, p. 863, c8-9. Jizang read about the three versions in Nāgārjuna’s biography, which Sengtan 僧昙 had brought from Khotan. Sengtan and his 11 companions set off for Inner Asia in 575 with the objective of bringing back Buddhist works that had been lacking in China. They returned home in 581 with 260 Sanskrit manuscripts. These works were translated into Chinese by Jānagupta (Shenajueduo 閔那崛多) and other translator-monks. The translation of Nāgārjuna’s biography has not survived, however, and none of the catalogues confirms the existence of such a work from this era. Nāgārjuna’s biography has only survived in a translation by Kumārajīva (344-409/413); however, it is missing the section about the three versions. If we accept Jizang’s report as credible then this detail was added to the text during the 150 years between the death of Kumārajīva and the expedition. Perhaps it was in Khotan that the text was thus expanded, bearing out the close connection between Khotan and the Buddhāvatamsaka-sūtra. See Ōnishi 1985: 500-505.

32 For a detailed description of the Huayan sūtras, see Takamine 1976: 457-469; Ishii 1964: 57-134. It is on the basis of these that Frédéric Girard prepared his excellent French-language summary. See Girard 1990: 16-27.
for the path by a young boy named Sudhana. This latter work has inspired a great deal of Buddhist art; indeed, the theme is depicted in pictures and carvings from Barabudur to Japan. In fact, I had an opportunity not long ago to view by torchlight the statues depicting the 53 stations of Sudhana’s journey in the Duobao 多寶 Pagoda of Dazu 大足. Relatively few Buddhist sūtras have survived in Sanskrit, so the dearth of Sanskrit manuscripts is by no means an indication that the work never existed in Sanskrit. The commentaries are of great use in determining the originality of a work and in examining how it is cited in other Indian works.

No written Indian commentary to any version of the larger Buddhāvataṃsaka-sūtra collection has survived, nor is it certain whether one ever existed. Two Indian commentaries relevant to the Buddhāvataṃsaka-sūtra have been preserved, although both discuss only one chapter of the sūtra, the Daśabhūmika-sūtra. The first is the Shizhu piposha lun 十住毘婆沙論, which, according to tradition, was written by Nāgārjuna and which expounds on the first two of the ten stages. Vasubandhu (400-480) wrote the second, the Daśabhūmivāyākhya (Shidi jing lun 十地經論), which expounds on the entire sūtra. Several Indian works quote from the Buddhāvataṃsaka-sūtra. The Da zhidu lun 大智度論, which is attributed to Nāgārjuna, cites the Bukesiyi jing 不思議經, which corresponds to the Gaṇḍavyūha. If we accept the authorship of Nāgārjuna, then the Gaṇḍavyūha-sūtra must already have existed in the 2nd-3rd centuries. However, Lamotte disputes this and considers the author of the work a Northern Indian monk who lived in the 4th century and is likely to have belonged to the Sarvāstivāda school. The Ratnagotravibhāga, written by Sāramati in the 5th century, quotes from the Appearance of Buddha in the world chapter (Rulai chuxian pin 如來出現品), while in his work entitled Śikṣāsamuccaya 三十四品, Śāntideva (686-763) quotes from the Leader of the Good chapter (Xianshou pin 賢首品), the Ten dedications chapter (Shi huixiang pin 十迴向品), Detachment from the world chapter (Li shijian pin 離世間品) and the Pure practice

---

33 For these works and Sanskrit publications, see Nakamura 1980: 194-197. The Gaṇḍavyūha title is difficult to define. The word gaṇḍa means ‘stem of a plant, part of sg.’ and vyūha is ‘arrangement, heap, manifestation’. On the basis of this, Gómez translated the title as The Sūtra Containing Manifestations in Sections. This definition is also supported by the fact that the text was referred to by sections called vinokgas. See Gómez 1967: 61-62.

chapter (Jingxing pin 淨行品) using the titles Ratnolkādhārāṇī, Vajradhvaja-sūtra, Lokottaparivarta, Gocarapariśuddhi-sūtra, respectively. It is important to note that even in this late Indian work Šāntideva refers to chapters in the Buddhāvatamsaka-sūtra as freestanding sūtras. This might indicate that the Buddhāvatamsaka-sūtra, which corresponds to the sixty- and eighty-fascicle versions of the Huayan jing, was unknown in India as one work, only individual chapters. However, Ōtake Susumu has attempted to show that the Buddhāvatamsaka-sūtra, in fact, was composed in India.

b. Partial translations before the translation of the larger Buddhāvatamsaka-sūtra

The first Chinese translation of the larger Buddhāvatamsaka-sūtra was finished in 420; prior to that, however, certain chapters had appeared as separate sūtras. These early translations characteristically do not correspond to individual chapters, but are rather extracts from several chapters of the larger Buddhāvatamsaka-sūtra. This raises the question of the connection between the partial translations and the translation of larger version. Were summaries made from the larger works or, conversely, were the larger sūtras compilations based on early freestanding works? According to Kimura Kiyotaka, the simplicity of the early works provides evidence that they appeared earlier than the larger works.

The earliest translation is associated with the name Lokakṣema, who translated a work entitled Fo shuo dousha jing 佛說兜沙經 between 178 and 189, which corresponds to the Names of Tathāgata (Rulai minghao pin 如來名號品) and Enlightenment through the light of Tathāgata (Rulai guangming jue pin 如來光明覺品) chapters in the sixty-fascicle work. The word dousha in Lokakṣema’s title is a transliterated Sanskrit word; however, it cannot be unmistakably identified. One possible solution is daśa, which means ten.

47 T 280.
48 Eric Zürcher accepts 29 works as Han period translations on the basis of the Buddhist catalogues and the stylistic marks in the works. Included among these is the Fo shuo dousha jing. See Zürcher 1991: 298.
49 Alternative solutions are Tathāgata, tosa (satisfaction). See Girard 1990: 17.
this is likely is that the number ten has great significance in the work. It introduces the characteristics of a bodhisattva with a list of ten. Some of these characteristics can also be found in the titles of individual chapters of the larger works; it is therefore likely that the editors of the larger Buddhāvatamsaka-sūtras used this work as a source in editing individual chapters. The number ten frequently occurs throughout the Buddhāvatamsaka-sūtra with the suggestion of perfection.

The sūtra entitled *The fundamental activity of a bodhisattva as related by Buddha* (*Fo shuo pusa benye jing* 佛說菩薩本業經), which Zhi Qian translated nearly fifty years later between 222 and 228, is extremely important in terms of the formation of the Buddhāvatamsaka-sūtra. Before any further investigation, it is important to clarify that the chronological order of the translations is not necessarily an indication of the order in which the original source works appeared. Indeed, it is conceivable that one work came to China much later than another. As a result, it is not certain that the Indian antecedent of *Fo shuo dousha jing* mentioned previously was composed earlier than that of *The fundamental activity of a bodhisattva*. The work is divided into three parts: the first part either has no title or it has not survived, the title of the second part is *The practice of making good wishes* (*yuansheng pin 頂行品*), and that of the third is *The ten stages* (*shidi pin 十地品*). The antecedents of the following chapters in the sixty-fascicle Huayan jing can be discerned in the work: *The names of Tathāgata* (*Rulai minghao pin 如來名號 品*), *Enlightenment through the light* (*Rulai guangmingjue pin 如來光明覺品*), *Pure practice* (*Jingxing pin 淨行品*), *The ascent of Buddha to the peak of Mount Sumeru* (*Fo sheng Xumiding pin 佛昇須彌頂品*), *The bodhisattvas gather as clouds in the Palace of the Glorious Victory and recite poems* (*Pusa yunji miaosheng dianshang shoujie pin 菩薩雲集妙勝殿上說偈品*) and *The ten abodes of the bodhisattvas* (*Pusa shizhu pin 菩薩十住品*).

According to Sakamoto Yukio, it would be erroneous to assume that these six chapters evolved directly out of this sūtra since the following works can be considered to be their middle stations of development: *Fo shuo dousha jing*, the Bodhisattvas ask about the
fundamental activity of Buddha sūtra (Zhupusa qiu fo benye jing 諸菩薩求佛本業經) and the Practices of the ten stages of the Bodhisattvas chapter (Pusa shizhu xingdao pin 菩薩十住行道品). However, Jan Nattier compared these three works (Dousha jing, Zhupusa qiu fo benye jing, Pusa shizhu xingdao pin) with the Fundamental activity of the Bodhisattva and convincingly showed that fitting the three sūtras together produces a text that corresponds to the Fundamental activity of the Bodhisattva. It can be concluded that the three texts were originally a translation of one work, although it was preserved in three parts in the transmission process and therefore later came to be seen as three separate works. Accordingly, from the aspect of the evolution of the text, the three works do not represent a later developmental stage, but another translation/recension of the very same work. This translation was done by Lokakṣema.

The work of Dharmarakṣa, who also translated several Huayan sūtras into Chinese, represents a milestone in the spread of these works. Already in the Chu sanzang ji ji 出三藏記集, the following works are listed as his translations:

1. Crossing the world (Du shi pin jing 度世品經) 27 May 291.
2. The appearance of Tathāgata as related by Buddha (Fo shuo rulai xingxian jing 佛說如來興現經) 31 January 292.
3. Gradually obtaining the virtue of omniscience (Jianbei yiqie zhi de jing 漸備一切智德經) 21 December 297.
4. The ten abodes of the Bodhisattva (Pusa shizhu jing 菩薩十住經) 9 November 302.
5. The ten stages of the Bodhisattva (Pusa shidi jing 菩薩十地經) 28 December 303.
6. The bodhisattva of the Equal Eyes asks about the ten samādhis (Dengmu pusa suowen sanmei jing 等目菩薩所問三昧經) 284-308?

According to Dharmarakṣa’s biography, he travelled with his master to Central Asia, where he learned the local languages and collected Buddhist manuscripts. Unfortunately, we do not learn when this journey took place or what areas he visited. However, there is no mention made of his translating between 273 and 284, and it is therefore possible that he journeyed west then. He translated the Huayan sūtras afterwards, so he is likely to have collected these materials during his journey. The fourth and fifth works have not survived, while the rest can be found in the Buddhist canon. The date of the sixth work is uncertain although it can presumably be placed after he returned from Central Asia (284?) and before he completed the last translation which can be dated with certainty (308). This item is missing from Daoan’s catalogue, which is frequently cited by the Chu sanzang ji ji 出三藏記集, so this provides some grounds for suspicion. This sūtra is extremely interesting in respect of the fact that it is absent from the sixty-fascicle Huayan jing, whereas it is included in the eighty-fascicle version under the title Chapter of the ten concentrations (Shiding pin 十定品). Kimura Kiyotaka is of the opinion that on the basis of this it cannot be ruled out that the eighty-fascicle sūtra appeared earlier than the sixty-fascicle work. It is more likely, however, that the eighty-fascicle version came about later and that its editor or editors also incorporated this sūtra, which had previously been spread as an independent work.

Dharmarakṣa’s Appearance of Tathāgata sūtra (*Tathāgatotapattisambhavanirdeśa-sūtra) is also noteworthy in several respects. First of all, as has been demonstrated by Takasaki Jikidō, this work is an important precursor to the inception of the tathāgatagarbha theory. The translation by Dharmarakṣa contains an introductory part which is not included in either the sixty- or eighty-fascicle Huayan jing; however, it can be found in the Tibetan translation. Either the translators of the larger Chinese version omitted this part or it had been missing from the original Sanskrit manuscript as well. A further remarkable aspect of the work is that, in addition to the Chapter of the appearance of Tathāgata, it also contains the Chapter of the ten acceptances (Shiren pin 十忍品). Like translations from earlier periods, therefore, this translation also includes more than one chapter in the later larger Huayan jing. It appears that the Rulai xingxian jing 如來興顯經, a work mentioned by the Lidai sanbao ji

歷代三寶紀 and translated by Bai 白 or Bo 布 Fazu 法祖, who lived in the time of Emperor Hui 惠 (r. 290-306) of the Jin 晉 dynasty (265-420), is another translation of this work. However, the Chu sanzang ji ji 出三藏記集 makes no mention of this work and so its existence is in serious doubt. According to the Lidai sanbao ji 歷代三寶紀, another translation of this sūtra is the Da fangguang rulai xingqi weimizang jing 大方廣如來性起微密藏經, which was completed in the Yuankang 元康 period and whose translator is unknown. According to the Kaiyuan shijiao lu 開元釋教錄, however, this is simply an independently spread version of the text in the sixty-fascicle Huayan jing, and it therefore cannot be considered a new translation. This version was lost in China, but was recently discovered in the Nanatsudera Temple in Nagoya. An investigation of this text has borne out the claim made by the Kaiyuan shijiao lu 開元釋教錄.

The Gradually obtaining the virtue of omniscience sūtra, the translation of the Daśabhūmika-sūtra, and the two other lost translations by Dharmarakṣa (4, 5) also demonstrate the ten stages of the spiritual development of a bodhisattva. This indicates that this work enjoyed great popularity during this period. The Lidai sanbao ji 歷代三寶紀 is the first source that attributes the translation of five Huayan sūtras to Nie Daozhen 聶道真, Dharmarakṣa's scribe. From among these it is only the Bodhisattvas ask about the fundamental activity of Buddha sūtra mentioned previously which has survived. The Chu sanzang ji ji 出三藏記集 makes mention of this and two other works, The original vow and practice of the bodhisattvas (Pusa benyuan xing pin jing 菩薩本願行品經) and The ten-stage path of the bodhisattvas (Pusa shi dao di jing 菩薩十道地經), however, it considers their translator unknown. The other two works attributed to Nie Daozhen (Shizhu jing 十住經 and Pusa chudi jing 菩薩初地經) also deal with the spiritual development of a bodhisattva.

Among the works lost early on we find the *Shidi duanjie jing* 十地斷結經, whose translator, according to certain works, was Zhu Falan 竺法蘭, who, as legend has it, came to Luoyang with the Chinese delegation following a dream of the Emperor Ming 明 (r. 58-75). If this were true, it would mean that the *Daśabhūmika-sūtra* would already have been translated into Chinese in the first century. According to the *Kaiyuan shijiao lu* 開元釋教錄, Zhu Fonian 竺佛念 also translated a work 365-385, the title of which is the *Shidi duanjie jing* or *Shizhu duanjie jing* and which consists of ten fascicles. The title of Taishō’s 309th work is similar: *Zuisheng wen pusa shizhu chugou duanjie jing* 最勝問菩薩十住除垢斷結經. The translator of this is also Zhu Fonian and it also consists of ten fascicles; it is therefore likely that the catalogue is referring to this work. This sūtra, however, is not identical to the Ten stages chapter in the *Buddhāvatamsaka-sūtra*, so it can only be listed among works related to the Huayan. It is a sign of serious interest in the *Daśabhūmika-sūtra* that, prior to the translation of the larger *Buddhāvatamsaka-sūtra*, it was rendered into Chinese two more times: by Gīnamitra under the title *Fo shuo Pusa shizhu jing* 佛說菩薩十住經 and by Kumārajiva and Buddhayaśas under the title *Shizhu jing* 十住經.

The last chapter of the *Buddhāvatamsaka-sūtra*, *Gaṇḍavyūha*, had also been translated before the larger translation. The Taishō canon also contains the *Foshuo luomoqie jing* 佛說羅摩伽經, which Shengjian 聖堅 rendered into Chinese between 389 and 406. The work consists of only three fascicles, so it is quite fragmentary compared to later translations. According to the *Lidai sanbao ji* 歷代三寶紀, An Faxian 安法賢 had translated it in the 3rd century under the same title, whereas Dharmakṣema translated it at the beginning of the 5th century. However, neither work has survived.

c. The sixty-fascicle *Huayan jing* ⁸⁶

The Sanskrit manuscript that served as the source for the first Chinese translation of the larger *Buddhāvatamsaka-sūtra* was brought from Khotan (Yutian 于闐, Hetian xian 和田縣 today). The sacred scriptures were jealously guarded and foreigners were not allowed to take them out of the country. Zhi Faling 支法領, however, ultimately succeeded in having the king present him with the first part of the *Buddhāvatamsaka-sūtra*, which consisted of 36,000 šlokas (jie 偈). Afterwards, he brought the work to Chang’an. Another monk who was travelling with him, Zhiyan 智嚴, did not return home, but carried on his journey toward Kashmir. He was surprised at what a pure life the monks in Kashmir lived and at how strictly they followed the monastic regulations. When he asked who could teach the Chinese, he was told it was Buddhabhadra and so he asked the master to accompany him to China.⁸⁷

The foreign master stayed in Chang’an 406-408 but probably had a difference of opinion with the other famous master translator of the age, Kumārajīva, who maintained his own harem behind the walls of the monastery and thus received criticism from monks who argued in favour of following the strict moral code. From Chang’an he went to Lushan 廬山, where he joined the community of Huiyuan 慧遠 (334-417) and commenced translating several texts on meditation. In 413, he went to Jiankang 建康, where he settled at the Daochang 道場 monastery. Here he met Zhi Faling, who had arrived from Chang’an. Zhi Faling asked Buddhabhadra to translate the *Buddhāvatamsaka-sūtra*, which he had brought with him from Khotan. On the tenth day of the third month of 418, he began the work and completed it in the sixth month of 420. Financial support for the work was provided by two officials: Meng Yi 孟顗,⁸⁸ who held the office of governor of Wu prefecture (*wujun neishi* 吳郡內史), and Chu Shudu 褚叔度,⁸⁹ who was the general in charge of the garrison on the right flank (*youwei jiangjun* 右衛將軍). After this, he compared the Sanskrit text with the Chinese translation. He completed this phase of the work on the twenty-eighth day of the twelfth

---

⁸⁶ For a German translation of the work, see Doi 1978, 1981, 1982; for a Japanese translation, see Etō 1917.

⁸⁷ For a biography of Buddhabhadra, see *Gaoseng zhuan* 高僧傳, T 2059: 50.334b26-335c14.

⁸⁸ We know that Meng Yi was a devout Buddhist; however, other sources do not confirm an association with the translation of the *Huayan jing*.

⁸⁹ Chu Shudu’s biography can be found in the *Nanshi* 南史 (*juan* 28), but it does not write about his Buddhist connections.
month of 421. The scribal (bishouzhe 筆受者) work was carried out by Faye 法業. Faye expounded on the teachings of the opus in a work of his own entitled Huayan zhigui 華嚴旨歸 and written in two fascicles. He placed the Sanskrit manuscript on a table and presumably made offerings to it. A Huayan hall (Huayan tang 華嚴堂) was built in the monastery, where the monks would probably have made offerings.

According to both the Chu sanzang ji ji 出三藏記集 and the Kaiyuan shijiao lu 開元釋教錄, it consisted of fifty fascicles at the beginning and was later divided into sixty. Other catalogues also confirm this. It is not known who re-named it the sixty-fascicle work, but it already had that name in the Sui period (581-618). However, the fifty-fascicle work continued to survive according to the catalogues and this is borne out by a manuscript from the Song period (960-1279) which consists of fifty fascicles. Since the third patriarch of the Huayan tradition, Fazang 法藏 (643-712) calls it the sixty-fascicle work in his commentary, this name is likely to have become common by the start of the Tang period (618-907). In terms of content, however, the text did not change.

Divākara (Rizhao 日照 in Chinese), a translator from India, arrived in the Chinese capital in 680, settled at the Taiyuan 太原 monastery, and soon became the most respected master translator of the age. He brought with him the Sanskrit manuscript of the last chapter of the Buddhāvatamsaka-sūtra, the Gaṇḍavyūha-sūtra, and, with the aid of Fazang, compared it as well as the other Sanskrit manuscripts available to him with the translation by Buddhhabhadra. They compared a total of 8-9 Sanskrit manuscripts, and found that nine stations which were missing in Buddhhabhadra’s translation were present in all the versions; the master, therefore, had omitted them from the work. Similarly, the part between the meeting with Maitreya and the one with Samantabhadra, where Mañjuśrī touches Sudhana’s head from a distance was also missing from Buddhhabhadra’s version. Naturally, in the

---

90 The colophon of the Huayan jing provides this information on the translation of the work. T 278: 9.788b3-9. Chu sanzang ji ji 出三藏記集, T 2145: 55.60c29-61a8. According to the Gaoseng zhuan 高僧傳 it was not Zhi Faling who requested Buddhhabhadra to translate the work, but two officials, Meng Yi and Chu Shudu. In addition to Faye, it also mentions Huiyan 慧嚴 as a participant in the work and adds that over a hundred others also assisted. It makes mention of the creation of the Huayan tang; however, it does not provide the time of the translation. T 2059: 50.335c4-9. The Gaoseng zhuan 高僧傳 also says that Faye was knowledgeable in the Huayan as Tanbin 曉斌 had learnt Huayan from him. T 2059: 50.373a23.

91 Chu sanzang ji ji 出三藏記集, T 2145: 55.11c9, Kaiyuan shijiao lu 開元釋教錄, T55, no. 2154, p. 505, b21.

92 Zhongjing mulu 眾經目錄, T55, no. 2146, p. 115, a11.

93 For his biography, see Song gaoseng zhuan 宋高僧傳 T50, no. 2061, p. 719, a19, HZ T 2073: 51.154c10. See Forte 1974: 135-164.

95 Parts that have been omitted: the ten persons called on between the visits to Māyā and Maitreya.
absence of the original manuscript, we cannot fault Buddhabhadra for this omission with certainty since it is possible that these parts were truly missing from the manuscript that he used. The missing parts were translated and the work was spread independently during the Tang dynasty under the title *Da fangguang fo huayan jing rufajie pin* 大方廣佛華嚴經入法界品. It was only in the Song period that they were incorporated into the sixty-fascicle translation.

d. The eighty-fascicle *Huayan jing*

Empress Wu Zetian 武則天 (623/625-705) learned that the original manuscript of the *Buddhāvatāmsaka-sūtra* could be found in Khotan and so she sent envoys to collect it. Śikṣānanda brought the work to China and later settled at the Dabian 大遍 monastery in the eastern capital, where he began translating it. This Sanskrit manuscript was longer than the sixty-fascicle *Huayan jing* by 9,000 ślokas and consisted of a total of 45,000 ślokas. The Sanskrit text was read aloud by Bodhiruci 菩提流志 and Yijing 義淨 while Fazang and Fuli 復禮 took it down. The work commenced on the fourteenth day of the third month of 695 and was completed in the Foshouji 佛授記 monastery on the eighth day of the tenth month of 699 with a foreword written by the empress herself. Foshouj appears as the site of the translation in Huiyuan’s 慧苑 (673-743) *Xu Huayan lieshu kanding ji* 續華嚴略疏刊定記 whereas the Empress Wu mentions the Dabiankong 大遍空 monastery in her foreword. A move was presumably made from there to the Foshouji monastery.

The earlier translation contained eight assemblies and 34 chapters while the new text had nine assemblies and 39 chapters in it. Despite the fact that the translation by Śikṣānanda is far longer than Buddhabhadra’s, the part in which Mañjuśrī touches Sudhana’s head from a distance has been omitted here as well. As noted earlier, this part had also been missing from the sixty-fascicle version; Divākara filled the gap on the basis of the *Gaṇḍavyūha-sūtra*,

which he had brought with him. Fazang completed the eighty-fascicle version with the part that had been omitted.\textsuperscript{100}

Śikṣānanda returned to Khotan in 704 to visit his sick mother and returned to China at the request of Emperor Zhongzong 中宗 (r. 684, 705-710) in 708. He died in 710 at the age of 59. According to his biography, after he was cremated his tongue remained and was sent back to Khotan. In his honour, a seven-storey pagoda was erected outside the northern gate of Chang’an and was named “the Pagoda of the Huayan Translator” (\textit{huayan sanzang ta} 華嚴三藏塔).\textsuperscript{101}

e. The forty-fascicle \textit{Huayan jing}

The king of the southern Indian state of Oḍḍiyāna sent a Sanskrit manuscript of the forty-fascicle \textit{Huayan jing} to Emperor Dezong 德宗 (r. 779-805), which Prajñā (744-810?) translated into Chinese. The master translator was originally from northern India and in his youth studied the Hīnayāna teachings, especially those of the Sarvāstivāda. After his ordination he travelled a great deal and came to know Yogācāra and Tantric Buddhism. He came to China to visit the Wutaishan 五台山, which was regarded as the residence of Mañjuśrī.\textsuperscript{102} In 781, he came to Guangzhou. He went on to Chang’an, where he was treated with great respect and enjoyed the support of the emperor. He began the translation on the fifth day of the sixth month of 796 and completed it on the twenty-fourth day of the second month of 798. He was also assisted in his work by the fourth patriarch of the Huayan school, Chengguan 澄觀 (738-839).\textsuperscript{103} This version, which is called the forty-fascicle \textit{Huayan jing},\textsuperscript{104} contains all the parts which are missing from the last chapter of the sixty- and eighty-fascicle works.

Of particular interest in this regard is the last fascicle, which includes \textit{The vow of Samantabhadra} (\textit{Bhadracarī-praṇidhānarāja-gāthā}, \textit{Puxian xingyuan pin} 普賢行願品). This was first translated by Buddhahbadra as a separate work under the title \textit{Wenshu shili fayuan

\textsuperscript{100} Huiyuan, a disciple of Fazang’s, provides a report on this. \textit{Xu Huayan lièshu kanding ji} 續華嚴略疏刊定記 R 5.49a1-12.

\textsuperscript{101} For his biography, see \textit{Song gaoseng zhuan} 宋高僧傳, T50, no. 2061. p. 718, c19-p. 719, a17.

\textsuperscript{102} For the connection between Mañjuśrī and the Wutaishan, see Birnbaum 1983.

\textsuperscript{103} For a critical biography, see Hamar 2002.

\textsuperscript{104} T 293.
jing文殊師利發願經, which is shorter than the later translations. The second translation was prepared by the famous Tantric master, Amoghavajra (705-774), under the title Puxian pusa xingyuan zan 普賢菩薩行願贊. Bart Dessein compared the three versions and came to the conclusion that Amoghavajra had changed the title of the work and that Prajñā had adopted this change from him. It appears to be contradictory, however, that Samantabhadra would be in the title of both the Sanskrit version and the two Tibetan translations (one of them as part of the Gaṇḍavyūha, the other as a separate work). It is more likely, therefore, that the name Maṅjuśrī in the title had already been changed to Samantabhadra in India.

f. The Sanskrit version

It is clear from the foregoing that according to the sources both the sixty- and eighty-fascicle versions of the Huayan jing were translated into Chinese based on Sanskrit manuscripts (fanben 梵本) from Khotan. This doubtless indicates that this work enjoyed enormous popularity in this area and was perhaps compiled at this very place. However, the Sanskrit manuscript has unfortunately not survived. According to Ōnishi Ryūhō, however, the Buddhāvatamsaka-sūtra never in fact existed in Inner Asia. Zhi Faling did not bring one work with him called the Buddhāvatamsaka-sūtra, but a number of sūtras which Buddhhabhadra compiled and named the Buddhāvatamsaka-sūtra. Śīkṣānanda in turn attempted to collect similar works based on the Buddhhabhadra version, and this gave rise to the Sanskrit manuscript which served as the basis for the eighty-fascicle translation.

This appears to be contradicted by a report by the second patriarch of the Huayan tradition, Zhiyan 智儼 (602-668, not to be confused with Zhiyan 智嚴 mentioned above) on a Sanskrit manuscript that could be found in the Dacien 大慈恩 monastery. He provides a precise description: it consisted of 541 pages with 55 syllables (zi字) in one line and 20 lines on one leaf. One śloka (song頌) consisted of 32 syllables. He counted 2280 (?) syllables on

---

105 T 296.
106 T 297.
108 During this period in Inner Asian, Sanskrit was used as the ecclesiastical language and Sanskrit texts were not translated into the vernacular of the peoples living here. It is therefore likely that works were also written in Sanskrit. Nattier 1990: 195-219.
111 This corresponds to the traditional Indian number of syllables in a śloka. See Monier-Williams 1899: 1104.
two sides of one leaf and thus there is a total of 1,323,480 syllables according to his count, making 41,980 ślokas plus ten syllables. Zhiyan’s count is not accurate because if he is basing his calculations on 2280 syllables then there is still only a total of 1,233,480 syllables, which, when divided by 32, gives us 38,546 ślokas and eight syllables. However, if we count 2200 syllables per leaf, this gives us 1,190,200 syllables and therefore makes 37,193 ślokas and 24 syllables. If we use this last count, the Sanskrit version is not much longer than the sixty-fascicle version, which consists of 36,000 ślokas. Zhiyan lists the chapters of the Sanskrit version as well, which I examine later in this chapter.

The next question is how this Sanskrit manuscript came to be in the Dacien monastery. We may consider the option that the manuscript used by Buddhhabhadra or a copy of it found its way here. However, due to the distance both spatial and temporal as well as the significant differences in the arrangement of the chapters, there is little likelihood of this. According to Sanada Ariyoshi, Xuanzang 玄奘 (600-664) might have brought the Sanskrit Buddhāvatamsaka-sūtra with him from his pilgrimage since the Dacien monastery featured prominently in his life. Here he translated a short Huayan sūtra as well, which I will cover later.

As I noted previously, a part was missing from the last chapter of the sixty-fascicle Huayan jing, the Gaṇḍavyūha, which was later translated by Divākara with the assistance of Fazang. Fazang wrote that he and Divākara had jointly examined the various Indian versions (tianzhu zhuben 天竺諸本), the Kunlun version (kunlun ben 崑崙本) and the freestanding version from Khotan (yutian biexing ben 于闐別行本), and that they had found that the parts that were missing from the sixty-fascicle version could be found in all of them. We can conclude from this mention of the “freestanding version from Khotan” and the fact that we know that Divākara had brought the Gaṇḍavyūha with him that they compared the last chapter of the sixty-fascicle Huayan jing with the freestanding sūtra.

Like Zhiyan, Fazang also mentions that the Sanskrit manuscripts of the Buddhāvatamsaka-sūtra could be found in the Dacien monastery: “I recently saw in the pagoda of the Dacien monastery three versions of the Sanskrit Buddhāvatamsaka-[sūtra]. I briefly compared all of them with the Chinese version and they were largely identical; the numbers of ślokas were also similar.”

114 According to Li Huiying, it is not clear whether the matter in question is the entire Buddhāvatamsaka-sūtra or only the Gaṇḍavyūha, although the phrase “freestanding version” suggests that it was only the Gaṇḍavyūha that was compared with the last chapter of the sixty-fascicle Huayan jing. See Li 2000: 70-71.
g. Partial translations after the translation of larger *Buddhāvatamsaka-sūtra*

The chapters translated after the eighty-fascicle translation was completed also raise several questions. The third patriarch of the Huayan school, Fazang, who was himself involved in the work of the eighty-fascicle translation, compared the final translation with the Sanskrit manuscript and found that the Teaching of Samantabhadra chapter was missing from the Chinese version but that it was part of the Sanskrit original. At the same time, the translator of the eighty-fascicle work also translated this *sūtra* under the title *Da fangguang Puxian suo shuo jing* 大方廣普賢所說經. The question therefore is why Śikṣānanda omitted this chapter from the *Huayan jing*. This chapter can also be found in the Tibetan translation prepared in the ninth century under the title *Kun-tu bzang-pos bstan-pa*. It is thus conceivable that the Sanskrit version that Fazang had access to was close to the version which the Tibetan translators used.

After the translation of the sixty-fascicle *Huayan jing*, one of the greatest translators of Chinese Buddhism, Xuanzang, also translated a short Huayan *sūtra* entitled *Xian wubian fotu gongde jing* 顯無邊佛土功德經, which corresponds to chapter twenty-six of the sixty-fascicle *Huayan jing*, *Life span* (*Shouming pin* 壽命品). This same chapter was also translated by Dharmabhadra in 1001 under the title *Foshuo jiaoliang yiqie fosha gongde jing* 佛說較量一切佛剎功德經. It is interesting to note that two freestanding Tibetan translations of this short work have also survived. In the work, the Consciousness-king bodhisattva relates that one kalpa in our world corresponds to one day in the world of Amitābha and that one kalpa in the world of Amitābha corresponds to one day in the next world. This last world where beings therefore live the longest is the Lotus-womb world, which is the pure realm extolled by the *Buddhāvatamsaka-sūtra*. The popularity of the *sūtra* can be explained in part by the strengthening of the Amitābha-cult in the Tang period and in part by the cult associated with Huayan Buddhism. The importance of the *Daśabhūmika-sūtra* is demonstrated by the fact that, after the partial translations of the previous era and after the translation of the larger

117 p 772, 934. For their titles, see below.
works, Śīladharma translated it once more in 799 under the title *Foshuo shidi jing* 佛說十地經.

h. The Tibetan version

In addition to the sixty- and eighty-fascicle Chinese translations, the *Buddhāvatamsakasūtra* has also survived in a Tibetan translation. It is not known how the *Buddhāvatamsakasūtra* arrived in Tibet, but since the Tibetans enjoyed active ties with Khotan perhaps the manuscript was brought from there.\(^\text{118}\) This forms part of the Bka’-’gyur called Phal-chen. The Tibetan title of the work is *Sangs-rgyas phal-po-che zhes bya-ba shin-tu rgyas-pa chen-po’i mdo*.\(^\text{119}\) On the basis of this, the Sanskrit title is reconstructed as *Buddhāvatamsaka nāma mahāvaipulya sūtra*. In the Derge version, the work fills four volumes in the Tibetan canon, with each volume divided into *bam-po*\(^\text{120}\) and the *bam-po* numbering beginning anew with each volume. At the end of each *bam-po*, the work is referred to by the following title: *Sangs-rgyas rmad-gcad ces bya-ba shin-tu rgyas-pa’i mdo*.\(^\text{121}\) According to the *Ldan-kar catalogue* compiled during the time of King Khri-srong-lde-brtsan (754-797), the work consists of 45 chapters and 39,030 ślokas. This makes 130 complete *bam-pos* and 30 ślokas. It is not difficult to calculate that one *bam-po* consists of 300 ślokas. The colophon of the Derge edition states that the Tshal-pa edition of this sūtra is divided into 115 *bam-pos*, and current editions have different ways of division. It is worth noting that this division is similar to the manner in which Zhiyan measured the length of the Sanskrit manuscript.\(^\text{122}\) The Tibetan translation was prepared in the first quarter of the ninth century by two Indian masters, Jinamitra and Surendrabodhi, as well as the Tibetan master Ye-shes-sde. The work consists of 45 chapters (*le’u*), and the bodhisattvas gather on nine occasions in seven places. According to the catalogue prepared by Qing Jixiang 慶吉祥 between 1285-1287, *Zhiyuan fabao kantong zonglu* 至元法寶勘同總錄, the Tibetan translation was prepared on the basis of the

\(^{118}\) Khri-lde-gtsug-brtsan (704-754) had a Chinese wife as well, who interceded for the monks who had fled in large numbers from Khotan. It is owing to this that they were able to settle here and that seven monasteries were built for them. Three years later, however, after the death of the queen, they were driven out. See Snellgrove 1986: 77.

\(^{119}\) P 761.

\(^{120}\) One *bam-po* consists of 300 ślokas. Lalou 1953: 313-314. The works in the catalogue prepared during the reign of Khri-srong-lde-btsan were arranged by number of *bam-pos*, in descending order. The origin of the term *bam-po* must be sought in Chinese as Indian tradition knows no such division. See Skilling 1997: 92.

\(^{121}\) This is the old Tibetan title for the *Buddhāvatamsaka-sūtra*. Bod-rgya tshig-mdzod chen-po 1985: II. p. 1711.

\(^{122}\) Lalou 1953: 319.
Chinese version. However, the Tibetan translation also contains two chapters which cannot be found in any of the Chinese translations; it is therefore more likely that the Tibetan translation was also prepared from Sanskrit. This is also supported by the fact that we know that Jinamitra and Surendrabodhi translated from Sanskrit.

The colophon of the Derge edition sheds a certain degree of light on the issue. First of all, according to this the number of bam-po differs in the various editions. It mentions two lines of tradition: one is the Chinese, the other the Indian. In the Chinese line, the teaching went from Buddha to Mañjuśrī and then on to Nāgārjuna. Buddhhabhadra (paṇḍita Byang-chub bzang-po) and Śikṣānanda (paṇḍita Dga’-ba) subsequently translated it into Chinese. The text was later passed on by Thu-thu-zhun hwashang, and then Sangs-rgyas-'bum of Dbus obtained the teaching from Gying-ju hwashang. This tradition has survived thanks to outstanding translators. The Indian line of tradition is as follows: the teaching came from Buddha to Nāgārjuna, then to Āryadeva and later to 'Jam-dpal-grags-pa. The teaching was received by a contemporary of Milarepa’s (1040-1123), Bari lo-tsaba (1040-1111), from Rdo-rje-gdan-pa and later by the great Sa-skya-pa (1092-1158) from Mchims-brtson-seng.

Partial translations also survived in Bka’-gyur, which nevertheless cannot be found in the Phal-chen part but, with one exception, in the Mdo sna-tshogs part. As mentioned before, there are two translations of the Life span chapter: The listing of the virtues of Buddha’s buddha-lands (’Phags-pa De-bzhin gshegs-pa-rgnams-kyi rgyas-kyi zhi-tan brjod-pa’i rnam-grangs) and The king-sūtra which cannot be grasped by thoughts (’Phags-pa bsam-gyis mi khyab-pa’i rgyal-po’i mdo zhes bya-ba theg-pa chen-po’i mdo). According to the Derge edition, the former was translated by Jinamitra, Dānāśila and Ye-shes-sde. The translators of the later work are unknown.

---

123 T 99.190b.
124 This confirms my own research as well, during which I have compared the Chinese and Tibetan translations of the Appearance of the Tathāgata sūtra. The Tibetan version contains an introductory section which cannot be found in any of the Chinese translations, except for the translation by Dharmarakṣa. The Chinese translators presumably took out this introductory section or it was already missing from the version that they used. Professor Aramaki Noritoshi, who examined the various versions of the Daśabhūmika-sūtra as the work was being translated into Japanese, also found that this chapter had been translated from Sanskrit (personal communication).

125 Sgra-shyur bam-po gynis-pa lists him among the translators from Sanskrit. For the relevant Tibetan text and its translation, see Scherrer-Schaub 1999. Bu-ston writes that KingRal-pa-can (r. 815-836) ordered Jinamitra, Surendrabodhi, Ye-shes-sde and other masters to translate the Buddhist works into Tibetan directly from Sanskrit because the words, or terminology, had been variously rendered in translations from Chinese and other languages, thus making it difficult to study the teaching. See Obermiller 1931: 196-197.

126 P 772.
127 P 934.
129 Ibid. 363.
The Unconceivable teaching of Buddha sūtra (Sangs-rgyas-kyi chos bsam-gyis mi khyab-pa bsstan-pa)\(^{130}\) is contained in the translation of larger Buddhāvataṃsaka-sūtra under the same title. The names of the translators have not survived, but the colophon says the following: “Chapter twenty-nine of the Large ear ornament sūtra\(^{131}\) consisting of one hundred thousand chapters is the teaching of Buddha which cannot be grasped by thought (Snyan-gyi gong-rgyan rgyas-pa chen-po’i mdo le’u ’bum-pa-las sangs-rgyas-kyi chos bsam-gyis mi khyab-pa bsstan-pa’i le’u nyi-shu dgu-pa’).\(^{132}\) In fact, this chapter is not the twenty-ninth in the Tibetan translation of the Buddhāvataṃsaka-sūtra, but the thirty-ninth. Bu-ston (1290-1364) writes that the entire Buddhist canon has not survived and that many parts have been lost. He cites the example of the Buddhāvataṃsaka-sūtra, which had originally consisted of 100,000 chapters, of which only forty survived.\(^{133}\) This report is surprising because the Tibetan translation consists of forty-five chapters. The 100,000 chapters (le’u) probably refers to the 100,000 ślokas. As mentioned earlier, according to the legend, the Buddhāvataṃsaka-sūtra which Nāgārjuna brought out of the palace of serpents contained 100,000 ślokas. It is interesting to note that this version is close to the sixty-fascicle Chinese version, while the version in the larger work is close to the eighty-fascicle work.\(^{134}\) This chapter is the twenty-eighth in the sixty-fascicle Huayan jing, so it is possible that this freestanding Tibetan translation is part of another, probably earlier Tibetan translation of the larger Buddhāvataṃsaka-sūtra, which might have been based on this recension of the Huayan jing.

The king of the prayer of outstanding acts (’Phags-pa bsạng-po spyod-pa’i smon-lam-gyi rgyal-po),\(^{135}\) which is a translation of Bhadracarī-pranidhānarāja-gāthā, can be found in the Rgyud section of Bka’-gyur. Unlike the two larger Chinese translations, the larger Tibetan translation also contains this work.

i. Comparing the chapters in the various versions

Although the Sanskrit Buddhāvataṃsaka-sūtra has not survived, Zhiyan noted the Chinese translations of the Sanskrit chapter titles in his commentary.\(^{136}\) We are thus afforded an opportunity to compare the arrangements of the chapters in the Sanskrit, the two Chinese

\(^{130}\) P 854.

\(^{135}\) P 716.
\(^{136}\) Huayan jing nei zhāngmen dēng za kongnu zhāng 華嚴經內章門等緣孔目章 T45, no. 1871, p. 588, a21-c14.
and the Tibetan versions. The number of chapters differs: the sixty-fascicle sūtra consists of thirty-four chapters, the eighty-fascicle work contains thirty-nine, the Tibetan translation has forty-five and the Sanskrit original – according to Zhiyan’s report – comprises forty-four.\footnote{For a detailed comparison of the various versions, see Kimura 1992: 4-10.}

This difference can be traced back to two causes. First, some chapters were omitted from certain versions. Thus, for example, chapter eleven of the Tibetan translation, *The garlands of Tathāgata*, and chapter thirty-two, *The speech by Samantabhadra*, are missing from all of the other versions; the *Ten concentrations* chapter can only be found in the eighty-fascicle and Tibetan texts. Second, the text is divided into chapters in different ways and thus the chapter titles also differ. Chapter two of the sixty-fascicle Chinese text, *Vairocana Buddha*, for instance, makes up five separate chapters in the eighty-fascicle version, whereas this number is nine in the Tibetan and Sanskrit works. The last chapter of the *Buddhāvataṃsaka-sūtra*, *Gaṇḍavyūha*, is uniquely divided into three chapters in the Sanskrit original. Another difference is that chapters of identical content are sometimes given different titles. For example, the title of chapter one is “The eye that sees the world clearly” in the sixty-fascicle and Sanskrit versions, whereas it is “The wondrous ornaments of the Lord of the World” in the eighty-fascicle and Tibetan works.

On examining the arrangements of the chapters, therefore, we find that the Tibetan and Sanskrit versions are similar. On the basis of these findings, it can be concluded that the Tibetan recension, which also contains two chapters which the other two do not, represents the fourth and last station of development of the *Buddhāvataṃsaka-sūtra*, whereas the eighty-fascicle Chinese recension, which contains one more chapter than the Sanskrit and the sixty-fascicle recensions, is the third station. Next, we provide a comparative chart of the titles of chapters in these four recensions of larger *Buddhāvataṃsaka-sūtra*.

2. Huayan Texts in Dunhuang

a. Huayan Buddhism in Dunhuang

The Huayanzong 華嚴宗 is one of the schools of Chinese Buddhism that is regarded as a product of a long process usually called Sinification, which refers to the way in which this originally foreign religion was adopted in China. However, it was not easy to internalize the foreign concepts and beliefs. Huayan is an example of fully fledged Chinese Buddhism, which was preceded by the transmission of the basic text, the Huayan jing, and the meticulous interpretation of this scripture by Chinese monks. During this exegetical analysis, the Chinese interpreters formulated the ideas of Huayan philosophy, such as the dependent arising of dharma-dhātu, the ten mystical gates, the six characters, the four dharma-dhātu s, the classification of teachings, etc. Those who wish to understand Huayan philosophy automatically turn to the essays written by Chinese exegetes that elaborate all these concepts in a clear way, but which are often unrelated to the Huayan jing source text. It is not surprising that the modern study of Huayan Buddhism focuses on the works of the Chinese patriarchs (Du Shun 杜順, Zhiyan 智儼, Fazang 法藏, Chengguan 澄觀 and Zongmi 宗密), and seems to neglect the earlier history of Huayan, which should be traced back to Central Asia, where this new insight on the Buddha-dharma was born.

Even if the Chinese understanding of Huayan jing was essential to the formation of Huayan Buddhism, and indigenous Chinese ideas and concepts played an important role in establishing Huayan thought, we cannot ignore the fact that all the concepts reflected in the Huayan jing were originally created in Central Asia, in the oasis cities of the Taklamakan Desert. All these concepts were later further elaborated by Chinese exegetes under the influence of indigenous Chinese thought and the earlier achievements in interpreting Buddhist philosophy. Unfortunately, we know relatively little about the early history of Huayan Buddhism in Central Asia, as the beginning of Mahāyāna Buddhism and the origin of Mahāyāna sūtras are also unclear. We have no sources on the history of Huayan Buddhism and the Central Asian interpretation of the Huayan jing. In the case of Chinese Buddhism the historical records preserved the names of the monks who studied the Huayan jing, the Huayan lineage of five patriarchs was established, and many works attributed to these monks are extant, thus we naturally tend to assume that Huayan school was created in China. However,
the absence of sources does not mean that Huayan Buddhism was not influential in Central Asia.

The provenance of the *Avatamsaka-sūtra* seems to show that this scripture was probably compiled in Central Asia and was highly respected by political leaders and the populace. Even if we have no written sources on the history of Huayan Buddhism in Central Asia, we do possess many artworks and ritual objects that reflect the cult of *Buddhāvatamsaka-sūtra*. It is important to bear in mind that the *Buddhāvatamsaka-sūtra* is extremely visionary in nature, thus it is an ideal topic for visual art. This *sūtra* is preached by Vairocana Buddha, but in fact it is most often bodhisattvas who preach after receiving empowerment through light emitted by Buddha. Mañjuśrī and Samantabhadra bodhisattvas very frequently play this role in the *sūtra*. These three celestial beings form the Huayan trinity, where Vairocana represents the aim of Buddhist practice, the state of enlightenment, Samantabhadra is the symbol of Buddhist practice, while Mañjuśrī is the representative of wisdom. This Huayan trinity is described in different ways by artists in Central and East Asia. Vairocana Buddha is a central topic in the exegetical tradition of Huayan in China: the patriarchs of the Huayan school regarded him as the representation of absolute truth. This absolute truth is none other than the real nature of all phenomena; that is, emptiness. In turn, this emptiness is revealed by the Buddhist teaching of dependent arising which is elaborated as the *dharma-dhātu* dependent arising in the Huayan school. The *sūtra* emphasizes the identity of Vairocana, emptiness and dependent arising:

Clearly know that all dharmas
Are without any existence in their own being.
To understand the natures of dharmas in this way
is to see Vairocana.¹³⁸

The appearance of Vairocana images in Central Asia strongly suggests that Huayan Buddhism was popular in this region. We have to bear in mind that at the beginning Buddha was not the object of any art, and it was only in the Gandhāra art of Buddhism under Hellenistic influence in the 1st-2nd century that Buddha images first appeared. At first Shākyamuni, the founder of Buddhism, was described, but later bodhisattvas and celestial

¹³⁸ Cook 1972.
buddhas appeared. The most popular celestial beings who were shown by early images were Amitābha, Bhaisajyagura and Akṣobhya. However the cult of all these beings was a later development of Buddhism in Central and East Asia.\(^{139}\) A very important example of this cult seems to be a Vairocana figure in Cave no. 17 of Kizil, which is situated at Kucha, the northern route of the Silk Road. In the headlight and on the body of the Buddha small buddhas are seen, thus some scholars reached the conclusion that it must be Vairocana Buddha. Other scholars raised doubts about this and identified it as the cosmic Buddha of the Lotus sūtra. Li Ruizhe thinks that the Buddha of this cave is a Buddha of the Hīnayāna Buddhism, and only a similar Buddha in cave 123 represents Vairocana Buddha.\(^{140}\) He argues that the Buddha in cave 17 includes only images of small buddhas and not other beings, while the Buddha in cave 123 also includes the images of other beings. Vairocana with other beings on his body became a standard representation of Vairocana in Central and East Asian Buddhist Art as Vairocana and the dharma-dhātu.\(^{141}\) This reflects the basic narrative of the Buddhāvatamsaka-sūtra: that Buddha manifests himself in different locations, in the whole dharma-dhātu, without leaving his earlier abodes. Thanks to his magical power Buddha is able to multiply and manifest himself simultaneously without obstruction in various locations. This basic concept of the sūtra probably inspired Chinese exegetes to formulate the theory of non-obstruction of phenomena and absolute, a key concept in Huayan philosophy.

The commercial and cultural center at the eastern end of the Silk Road, Dunhuang also testifies to the influence of Huayan Buddhism in Central Asia. The image of Vairocana with the dharma-dhātu appears in 13 caves; the earliest painting can be dated to the 6\(^{th}\) century, but most of the images were made under the Tang dynasty.\(^{142}\) It is interesting to note that in several cases Vairocana with dharma-dhātu is shown in the context of the Buddha Recompenses the Favour Sūtra (Baoen jing 報恩經). It is possible that later Huayan transformation tableaux became the standard visual description of the Huayan jing, thus Vairocana with dharma-dhātu was connected with the Buddha Recompenses the Favour Sūtra.\(^{143}\) The Huayan transformation tableaux shows the seven locations and nine assemblies where Buddha taught the Huayan jing.\(^{144}\)

144 Wong 2007.
Fortunately, the frescos, statues and painting are not the only sources that enable us to detect the impact of Buddhism, and draw conclusions about the spread of Buddhism in different periods in Dunhuang. The famous cave library of Dunhuang preserved many sources that shed light on the history of Chinese Buddhism. Eighty-eight percent of the materials found in Dunhuang are Buddhist texts that can be divided into eight categories, according to Fang Guangchang: 145

1. Canonical works (zhengcang 正藏)
2. Extracanonical works (biecang 別藏)
3. Tiantai works (tiantai jiaodian 天台教典)
4. Vinaya works (pinicang 毗尼藏)
5. Chan Canon (chancang 禪藏)
6. Popular works propagating Buddhism (xuanjiao tongsu wenshu 宣教通俗文書)
7. Documents of Monasteries in Dunhuang (Dunhuang siyuan wenshu 敦煌寺院文書)
8. Apocryphal sūtras (yiwei jing 疑偽經)

The Huayan texts include translations of the Buddhāvatamsaka-sūtra, commentaries on the Buddhāvatamsaka-sūtra and treatises on Huayan philosophy written by Huayan patriarchs. These texts belong to the first two categories established by Fang Guangchang. In terms of numbers, it is true that Buddhāvatamsaka-sūtra is far behind the Mahāyāna sūtras like the Lotus sūtra, the Prajñāpāramitā sūtras, or the Diamond sūtra which have thousands of copies in Dunhuang. Altogether 149 manuscripts of the eighty-fascicle Huayan jing, the later complete Chinese translation of the Buddhāvatamsaka-sūtra, are found in the Dunhuang library, and only fifteen manuscripts preserved the earlier translation of the Buddhāvatamsaka-sūtra, the sixty-fascicle Huayan jing. 146 However we must bear in mind that the number of the texts found in Dunhuang does not necessarily reflect the importance of a certain scripture in Chinese Buddhism. Some scriptures, due to their content, served votive purposes, thus believers asked professional copyists to copy scriptures for the benefit of their family, or for protection. The Huayan jing could also be used for this purpose, as a story in the Account of Stimuli and Responses Related to Buddhāvatamsaka-sūtra (Da fangguang fo

146 Li 2008.
In the Zhengsheng period (695) Deng Yuanying (originally Yuanshuang) of Huayin had a close friend who suddenly was infected with a disease, and suffered from this disease. He came back to life after seven days. He told Yuan Shuang: “I saw that the official of the underworld was about to chase your father, and the order was soon to be issued. You should accumulate merit to avoid this disaster. Yuanying was frightened and asked: “What kind of merit do I need for my father to avoid this fate?” He replied: You should hurry to copy the *Buddhāvataṃsaka-sūtra*! Don’t be late, the date of your father’s death is not far! Yuanying went to the market, and bought paper. He went to the Chan shrine of the neighbouring monastery, and asked the Chan master to introduce him to a scribe of sutras who lived a pure life according to the Dharma, and can start to write right away. He finished the copying of the whole *sūtra* in less than ten days. They celebrated it with a vegetarian feast. This way he could avoid this calamity. Yuanying subsequently followed the custom of observing the mourning period for his deceased mother, which kept his sorrow keen in his heart. In that winter in the eleventh month the withered plants on his mother’s grave that had been planted a long time before suddenly started to blossom and grow leaves. The grave became covered with fragrant and beautiful flowers. It must have been the effect of copying the *sūtra*. The officials of that region wrote memorials about this. Empress Wu Zetian greatly appreciated it, and presented him with a gate of filial piety with the imperial inscription.  

In fact, we find some evidence that the manuscripts of the *Huayan jing* were made in order to gain merit, and even the names of the donors were preserved in colophons to some of the manuscripts. The colophon of S. 6476 says that the manuscript was made as an offering (*gongyang*) by bhikṣu Deren 德仁. S. 1608 was copied as an offering by bhikṣu

---

147 *Da fangguang fo huayan jing ganying zhuan* 大方廣佛華嚴經感應傳, T51, no. 2074, p. 177, a10-21.

148 For the colophons, see Dunhuang yishu zongmu suoyin xinbian 敦煌遺書總目索引新編 2000.
Daoxiang 道祥, S 2245 by bhikṣu Tanwei 曇威, S. 5361 by bhikṣu Tanyong 曇詠. All these examples would suggest that the *Huayan jing* was mostly popular among monks, probably due to the abstruse teachings proclaimed in this voluminous Mahāyāna *sūtra*. However, we find an example of a layman called Gao Bi 高弼, who made a copy of the *sūtra* (S. 4252) for his deceased wife Yuan Shengwei 元聖威.

Nonetheless the *Huayan jing* was certainly not as popular as the other above mentioned Mahāyāna *sūtras* in terms of copying for gaining merit. Examining the reconstructed *Huayan jing* from Dunhuang manuscripts in *Dunhuang baocang* 敦煌寶藏 we find that nine fascicles are missing from the eighty-fascicle *Huayan jing* (11-14, 18, 20, 49, 51-52), and also nine from the sixty-fascicle *Huayan jing* (3, 6-7, 10-13, 29-30, 32).

b. The manuscripts of the chapter *Baowang rulai xingqi pin* 寶王如來性起品 in Dunhuang

In order to ascertain the textual differences between the Dunhuang manuscripts and the transmitted scripture found in the Taishō edition of the Chinese Buddhist canon we select the thirty second chapter of the sixty-fascicle *Huayan jing*: *The nature-origination of the Jewel King Tathāgata* (*Baowang rulai xingqi pin* 寶王如來性起品). This chapter is preserved in the following five manuscripts owned by the Beijing National Library:

1. 北 21 (冬 80): T. 9, no. 278, p. 627a16-631a18. (fascicle 35)
2. 北 22 (號 89): T. 9, no. 278, p. 616a20- b9. (fascicle 34)
3. 北 23 (洪 40): T. 9, no. 278, p. 616 b17-c9. (fascicle 34)
4. 北 24 (師 98): T. 9, no. 278, p. 617c11-618a29. (fascicle 34)
5. 北 25 (闕 89): T. 9, no. 278, p. 623a5-631b5. (fascicle 35-36)

At first sight it is very obvious that these five manuscripts must originally have belonged to at least two different manuscripts, as the texts of the first and fifth manuscripts

---

149 On the significance of this chapter in the *Huayan jing* and its Chinese interpretation by the Huayan school, see Hamar 2007b.
overlap. However, if we compare the styles of writing it turns out that these five manuscripts were written by four copyists. 北 22 and 北 23 were written by the same person.150

There are many orthographic variations in these manuscripts: some of them are the traditional simplifications called *suzi* 俗子 like 学, 花, 乱, 礼, 号, 无, 与, others are special variations also found in other Dunhuang manuscripts.

---

150 I relied on Imre Galambos’ experties in making this conclusion.
Collating with the Taishō edition of the text we find examples that prove these three of the five texts are not the same recension of the sūtra as the one that the Taishō edition was based on; i.e. the Korean edition of the Chinese Buddhist canon. The Beijing 21, 22 and 25 include six alterations that are also found in the Song, Yuan and Ming editions of the sūtra, according to the philological examination conducted by the editors of the Taishō edition. It is interesting to compare Dunhuang manuscripts with a manuscript found in Japan. This text is *Da fangguang rulai xingqi weimizang jing* 大方廣如來性起微密藏經, which seems to be an independent sūtra, but is in fact identical with the *Rulai xingqi pin* of the sixty-fascicle *Huayan jing*, the text under consideration here. It is probable that this chapter was so popular under the Tang dynasty that it was circulated as an independent text. The *Da fangguang rulai xingqi weimizang jing* was lost in China, but has been recently discovered in the Nanatsudera of Nagoya.\(^1\) The text of *Da fangguang rulai xingqi weimizang jing* found in Nagoya was published by Kimura Kiyotaka.\(^2\) In the first case the Japanese manuscript agrees with the Korean edition, while it confirms the Dunhuang versions in the other cases. In the comparative tables below we have added the Taishō punctuation to the Dunhuang manuscripts in order to facilitate comparison, even if there is no punctuation in the Dunhuang texts. In addition we use the regular characters even where the Dunhuang manuscripts display orthographic variations.

However, we also find cases where one of the Dunhuang manuscripts differs from the others, but its reading is confirmed by other Chinese manuscripts transmitted to Japan, according to the notes in the Taishō edition. This attests to the fact that in Dunhuang region different recensions of this sūtra were circulated.

<table>
<thead>

</table>

We can also find cases where Dunhuang manuscripts might have preserved recensions that none of the transmitted recensions can confirm. Using other characters than in the transmitted text results in changes to the meaning of the text; however, these changes are acceptable in the context of the sūtra.

In addition to providing information on textual history, the Dunhuang manuscripts are also invaluable sources because of the light that they shed on the tradition of copying texts. The colophons give us clues about the donors, the individuals who copied, the purpose of the donation and the time when the copying took place. The donor and the copyist might be the same person, but the donor also could hire someone else specialized in copying sūtras (jingshen 經生). The copyist could be a lay person, or a monk. In the story above, we learn that Deng Yuanying bought the paper and ink and hired a monk from a Chan monastery to copy the Huayan jing in order to save his father from death. The Dunhuang manuscripts certainly reveal the proficiency of the copyist: the style of the calligraphy and the mistakes in the manuscripts indicate the skill of the person who copied the sūtra.

One of the most frequently made mistakes is the omission of characters. However, we should bear in mind that the copyist also depended on a manuscript which might already contain that omission, thus he was only repeating mistakes, and not generating them himself.

Some of the omissions seem to consist in shortening a two-character word into one character, for example guangming 光明 becomes guang 光, or jingjie 境界 becomes jing 境, or sanmie 散滅 becomes san 散, which do not detract from the meaning of the text. Some of the omissions cause more serious damage to the text, as information can be lost by leaving out two or three characters, while omitting the word of negation (bu 不) gives the sentence the opposite meaning. It is very clear that the copyist was not careful enough when he omitted the last character of the well-known technical term pusa mohesa 菩薩摩訶薩 (bodhisattva mahāsattva).

Another very frequent alteration in manuscripts is to use a different character than in the transmitted text. However, in some cases this does not corrupt the text as the character used in the manuscript has the same meaning, even if one of its radicals is different.

We also find cases where due to the mistake of the copyist the text contains one or more extra characters.

In the last three cases one character, *na* 那, *jian* 見, or *zuo* 作 has been duplicated in the text, which can be attributed to carelessness. All three cases appear in manuscript B 21, which also...
includes a very special kind of error. We find four cases where the order of two characters is
changed, even if the second character forms a term with the third character. For example, *ci sanmei* 此三昧 means *samādhi* in the original text, but B 21, by changing the order of *ci* and
*san*, gives *san ci mei* 三此昧 which is clearly wrong. Based on these mistakes we might
suspect that this was probably not a professional copyist but a non-professional devotee who
copied this *sūtra* as an offering.

| B 21: 道場成菩提  逮得三此味  | 道場成菩提  逮得此三昧 |
| B 21: 若有得見如來色身。眼清得淨。  | 若有得見如來色身。眼得清淨。 |
| B 21: 譬如乾積草 等彼須彌山  | 譬如乾草積 等彼須彌山 |
| B 21: 爾時十方各過十不可說百千億那由 佛他剎微塵等世界之外。  | 爾時十方各過十不可說百千億那由他佛剎微塵等世界之外。 |

c. Conclusion

As we have seen, Huayan Buddhism had a considerable impact in Central Asia, as it is
attested by visual art and scriptures found in Dunhuang. Even if the *Huayan jing* was not as
popular for votive purposes as some other *sūtras*, Chinese miraculous stories and colophons in
Dunhuang manuscripts prove that this *sūtra* was also copied to gain merit for the donor or
his/her relatives. This shows very clearly that Huayan Buddhism was not only a scholastic
school of Chinese Buddhism, but also a form of Buddhism that was widely practiced among
the populace in Tang China.

By collating the Dunhuang manuscripts with the transmitted text, we have found that
various recensions of this *sūtra* are preserved by the former. Some of these recensions are
confirmed by the transmitted texts, others are recensions that have been lost during
transmission. These Dunhuang manuscripts are invaluable sources for reconstructing the
textual history of a *sūtra*, as they preserve certain variations that are not found in the
transmitted text, and can confirm others that are found in the transmitted versions.

However, these manuscripts also include mistakes that occurred during the process of
copying: even if the copyist is supposed to copy the sacred text with full attention, there are

---

235 *Da fangguang fo huayan jing* 大方廣佛華嚴經, T09, no. 278, p. 627, b27.
236 *Da fangguang fo huayan jing* 大方廣佛華嚴經, T09, no. 278, p. 629, c4-5.
limits to human capacity and error can never be avoided. It also reminds us that if there is no transmitted text, and only the manuscript is extant, we must exercise great caution with these manuscripts, as the text may indeed be corrupt.
3. Chinese Miraculous Stories about the *Buddhāvatāmsaka-sūtra*

a. Introduction

Chinese people have been fascinated by supernatural, strange and unusual happenings since ancient times, and a great many records of rare celestial appearances, spirits and other phenomena were recorded. From the Han dynasty (206 BC – 220 AD) onwards, dynastic histories included a chapter on such events. The appearance of strange phenomena was linked to human behaviour: one of the oldest Chinese books, the Book of Documents, relates how the emperor’s behaviour influences Nature.

Wildness: constant rain responds to it. Presumption: constant sunshine responds to it. Laxity: constant heat responds to it. Rashness: constant cold responds to it. Stupidity: constant wind responds to it.

In the history of ancient Chinese philosophy Zou Yan 鄒衍 (305–240 BC), is credited with founding the school of five elements (*wuxing 五行*), which claims that the human and cosmic worlds influence one another. This philosophical concept is labelled “correlative cosmology”. It was adopted by the famous Confucian philosopher of the Han dynasty, Dong Zhongshu 董仲舒 (179–104 BC), who emphasized the mutual influence of the heavenly and human realms (*tianren xianggan 天人相感*). With the collapse of the Han empire Confucian ideology lost much of its authority, leaving space for other intellectual initiatives. Frustrated with the current political and social situation, the scholarly elite indulged in metaphysical speculations of the philosophical school called Dark Learning (*xuanxue* 玄學). In their literary genre, Pure Conversation (*qingtan 清*).

---

Given the growing interest in the discussion of transcendental topics, it is hardly surprising that a whole series of works were written on strange phenomena. These works are referred to as “records of strange phenomena” (zhiguai 志怪).\(^{242}\)

It was during the 3rd-4th centuries that the newly introduced religion of Buddhism started to attract many followers, and even the scholarly elite became interested in prajñā philosophy, which resembled the indigenous daoist teachings. The Chinese scholars discovered not only the mystical aspects of Buddhism, but also its magical side. In the biography of Buddha we find several miraculous episodes, the best-known of which is his victory over rival religious teachers in Śrāvastī by means of a magical performance involving the multiplication of his body.\(^{243}\)

Several monks from India or Central Asia became famous for their ability to work miracles. They were able to foretell important political events, or make rain in times of drought. Not surprisingly, the emperors greatly appreciated these monks, and sometimes appointed them as their advisors.\(^{244}\) At the same time, this imperial approval facilitated the spread of Buddhism in China. The first miraculous stories were probably written about these masters and their extraordinary talents, and were later incorporated into the official accounts of these monks’ lives in the collections of Buddhist biographies. The miraculous stories undoubtedly served a didactic purpose: ordinary people were unable to understand the abstruse philosophical tenets of Buddhism, so these stories about masters and their amazing achievements were an ideal way to inspire them to religious development.

b. The early miraculous stories in Buddhism

In addition, the Mahāyāna scriptures were also suitable sources for the composition of miraculous stories, since they depict celestial bodhisattvas who, according to their bodhisattva vow, must work for the benefit of all living beings, and help them to leave the world of suffering, the samsāra. The twenty-fifth chapter of the *Lotus sūtra* in Kumārajīva’s translation states that Avalokiteśvara can save anybody at the mere invocation of his name; he is

\(^{241}\) Zürcher 1959: 93-95.
\(^{242}\) Gjertson 1989: 3.
\(^{243}\) Ōtake 2007: 89.
\(^{244}\) A famous example is Fo Tudeng. See Wright 1948.
especially effective in cases of fire, storm, illness, demons, fetters, brigands and the sword. If a woman wishes to bear a child, she must pray to him. Such was the popularity of this chapter that it was circulated alone under the title *Avalokiteśvara-sūtra*, and the first collection of miraculous stories, *Records of Miracles Concerning Avalokiteśvara* (*Guangshiyin yingyan ji 光世音應驗記*), written by Xie Fu 謝敷 around 399, describes seven cases of bodhisattva saving someone. Later on, several continuations of this work were authored. One of them, *The Additional Records of Miracles Concerning Avalokiteśvara* (*Xi Guangshiyin yingyan ji 繹光世音應驗記*), arranges the tales according to the kinds of trouble from which the bodhisattva rescued people.\(^{245}\)

The didactic purpose is very obvious in the tales which describe cases of karmic retribution. The aim of the collection, *Records of Miraculous Retribution* (*Mingbao ji 冥報記*), written by the government official and pious Buddhist practitioner Tang Lin 唐臨 (601-660) in the mid seventh century, was to persuade non-believers of the reality of karmic retribution.\(^{246}\) These stories show that the virtuous will enjoy a better rebirth, while those who commit evil deeds will be reborn into a vicious world. Many of the stories include accounts of the nether world and its bureaucracy.

The other type of collection of miraculous stories is associated exclusively with one of the Mahāyāna sūtras. The early Indian followers of Mahāyāna Buddhism greatly respected the Mahāyāna sūtras, as they represent the wisdom of the Buddha: in the absence of Buddha’s relics the sūtras can be venerated.\(^{247}\) The sūtras also encouraged believers to recite, copy and explain the texts, as innumerable good karmas can be accumulated by means of these pious activities. The importance of sūtra copying in China is well attested by the collection in the Dunhuang cave library, where hundreds or thousands of copies of votive sūtras have survived.\(^{248}\) The first of these works is the *Miraculous Stories about the Diamond Sūtra* (*Jin’gang bore jing lingyan ji 金剛般若經靈驗記*), written by Xiao Yu 蕭瑀 (575-648) at the end of 6th century. We find other collections about the *Lotus sūtra* and the *Buddhāvatāmsaka-sūtra*.

\(^{246}\) Ibid., 118.
\(^{247}\) Schopen 1975.
\(^{248}\) Sam van Schaik and Imre Galambos 2012.
Several collections of miraculous stories about the *Buddhāvataṃsaka-sūtra* were written. The earliest extant collection is the *Account of Stimuli and Responses Related to Buddhāvataṃsaka-sūtra* (Da fangguang fo huayan ganying zhuan 大方廣華厳經感應傳, hereafter *Ganying zhuan*), compiled shortly after 783 by Hu Youzhen 胡幽貞 (?-783+). This collection must have been based on *The Collection of Buddhāvataṃsaka-related Numinous Tales (Huayan zuanling ji 華嚴纂靈記)*, which has been lost since the 14th century, though citations by Chengguan 澄觀 (738-839), Purui 普瑞 (1254-1329), Zongmi 宗密 (780-841), Yongming Yanshou 永明延壽 (904-975) and Tan’ei 湛叡 (1271-1346) have survived. Chengguan states that this work was authored by Fazang 法藏 (643-712) and was later “polished”; however, he does not provide the names of the editors. Choe Jiweon 在法藏的傳記中 seems to corroborate this statement, but adds that this work is also called *The Record of the Transmission of the Buddhāvataṃsaka-sūtra (Huayan jing zhuanji 華嚴經傳記)* in five fascicles, and that Fazang was prevented from finishing this work by his death, and his disciples Huiying 惠英 (?-712+), Huiyuan 慧苑 (673-743) and others added comments (*lun* 論) and eulogies (*zan* 贊), but did not change much. Purui 普瑞, who lived under the Yuan dynasty, in his commentary on Chengguan’s introduction to his commentary on the *Buddhāvataṃsaka-sūtra*, says that originally the *Zuanling ji* was Fazang’s *Huayan jing zhuan ji*, and by the time of Chengguan, Huiyuan wrote a work entitled *Zuanling ji* in five fascicles, Huiying authored the *Huayan ganying zhuan* in two fascicles, and the layman Hui Youzhen edited it in one fascicle. This seems to be substantiated by a Korean catalogue which lists *Huayan jing zhuan ji* and *Zuanling ji* side by side, the former being attributed to

252 Huayan xuantan huixuan ji 華嚴懸談會玄記 (X vol. 8, no. 236, p. 379b15-21): 纂靈記, 説者以華嚴傳記五卷, 本賢首集, 文有十章: 一部類, 二隱顯, 三傳譯, 四支流, 五論釋, 六講解, 七小章, 八轉讀, 九書寫, 十雜述. 此賢首初集, 後經修飾. 至清涼時, 有二家, 並賢首弟子. 一靜法寺慧苑法師修五卷, 名纂靈記. 二經行寺慧英法師修兩卷, 名華嚴感應傳. 又近四明居士胡幽貞纂成一卷.
Fazang and the latter to Huiyuan. The catalogue also lists Hui Youzhen’s work, but does not mention Huiying.253

The concept of stimulus and response (ganying 感應) is rooted in the ancient Chinese belief in correlative cosmology. The practitioner of the Buddhāvataṃsaka-sūtra creates a stimulus by his/her efforts, and the Buddha, bodhisattvas or other celestial beings respond with a miracle. Miraculous responses of this kind have been recorded recently: stories have spread about miraculous cures experienced after worshipping a bodhisattva or reciting a sūtra.254 Similar phenomena are described in Daoism, when a Daoist god makes miraculous responses (lingying 灵應) after being invoked by an adept.255

Although Huayan Buddhism declined after the Tang dynasty three further collections are extant: the first is the Short Record of Account of Stimuli and Responses Related to Buddhāvataṃsaka (Huayan jing ganying lüeji 華嚴經感應略記) by Zhuhong 祢宏 (1535-1615),256 the second is Hongbi’s 弘璧 (1598-1669) Causes of Stimuli and Responses Related to the Buddhāvataṃsaka-sūtra (Huayan jing ganying yuanqi zhuan 華嚴經感應緣起傳),257 and the third is the Chronological Account of the Efficacies of Huayan jing (Lichao huayan chiyan ji 歴朝華嚴持驗記) written by Zhou Kefu 周可復 under the Qing dynasty.258

As we saw above the Ganying zhuan must have been based on the Record of the Transmission of the Buddhāvataṃsaka-sūtra (Huayan jing zhuanji 華嚴經傳記),259 which is a conscious attempt to create a separate Huayan tradition by giving a detailed account of the texts and masters related to the Buddhāvataṃsaka-sūtra. The work is divided into ten chapters. The first chapter, Versions (bulei 部類), relates that originally there were three versions of the Buddhāvataṃsaka-sūtra, of which the shortest, consisting of a hundred thousand ślokas260 and forty-eight chapters, was transmitted into the human world.261 The second chapter, Hidden and Manifested (yinxian 隱顯), says that in the land of Zhejupan 遮拘槃 king Liye 历葉 greatly respected this sūtra, and Zhi Faling 支法領 was able to receive thirty-six

260 Śloka is a distich of Sanskrit verse consisting of two sixteen-syllable lines.
261 For a detailed explanation of the three versions, see Hamar 2007c: 139-140.
262 Zhejupan can be identified as Karghalik, the present-day Yecheng 葉城 in Xinjiang. See Chen 2007: 107.
thousands ślokas. The third chapter, Transmission of Translations (zhuanyi 傳譯), includes short biographies of three translators, Buddhhabhadra (359/360-429), Divākara (613-688) and Śikṣānanda (652-710). The fourth chapter, Partial Translations (zhiliu 支流) lists scriptures which were translated either before or after the translation of the complete Buddhāvataṃsaka-sūtra, and can be regarded as separate translations of single chapters, or are related to the whole corpus of Buddhāvataṃsaka-literature. The fifth chapter, Commentaries (lunshi 論釋), while listing some Indian and Chinese commentaries on the sūtra, includes the story that when Vasubandhu wrote his commentary on the Daśabhūmika-sūtra, the sūtra emitted light and the mountain and the ground trembled, which everybody took as an auspicious sign. The sixth chapter, Interpreters (jiangjie 講解) records the biographies of seventeen masters and the names of another twenty-four masters who explained the Buddhāvataṃsaka-sūtra. Here we find the biography of Fazang’s master, Zhiyan 智巖 (602-668). The seventh chapter, Reciters (fengsong 諷誦), includes the biographies of eleven masters who recited this scripture. Four stories can be found in The Account of Stimuli and Responses related to Buddhāvataṃsaka (Da fangguang fo huayan ganying zhuan 大方廣佛華嚴經感應傳) by Hu Youzhen. The eighth chapter provides the biographies of eight monks who chanted (zhuandu 轉讀) the sūtra. This kind of chanting differs from the previously described reciting in that in case of chanting only the title of the sūtra and some parts of it are recited. The ninth chapter, Copying (shuxie 書寫) contains six biographies, one of which tells the story of a person who dies but then comes back to life and speaks of his experience in the nether world of the merit of copying the Buddhāvataṃsaka-sūtra. The last chapter, Miscellaneous Records (zashu 雜述), lists some works related to the Buddhāvataṃsaka-sūtra composed by Chinese authors.

d. Miraculous stories in Huayan exegetical works

However, collections of miraculous stories are not the only sources for legends associated with the Buddhāvataṃsaka-sūtra. These legends are recorded in the great exegetical works of the Huayan school, Fazang’s commentary on the Buddhāvataṃsaka-sūtra, (Huayan jing Tanxuanji 華嚴經探玄記) and Chengguan’s澄觀 (738-839) commentary (Da

263 For a list of these works and their relation to the complete translation, see Hamar 2007c.
264 Da fangguang fo huayan jing ganying zhuan 大方廣佛華嚴經感應傳, T51, no. 2073, p. 156, b27-c1.
Fazang divides his introduction (xuantan) to the Buddhāvataṃsaka-sūtra into ten sections. The eighth section, Versions and Transmission of Translations (bulei chuanyi) introduces the various versions of the Buddhāvataṃsaka-sūtra, the commentaries on this scripture, its Chinese translation, the independently circulated chapters, and finally the stimuli and responses.

Fazang includes six miraculous stories in his commentary. While giving an account of the various translations he tells the story about Buddhabhadra’s translation which can be found in many other sources, though his biography in the Gaoseng zhuan does not record it. The legend says that when Buddhabhadra made his translation in the Xiesikong monastery of Yangzhou there was a lotus pond before his hall, and every morning two boys dressed in green (er qingyi tongzi) emerged from the pond, cleaned the master’s room, made ink and served him. In the evening they returned to the pond. Fazang says that tradition explains that according to the legend the original version of the Buddhāvataṃsaka-sūtra was hidden in the nāga palace, and the king of nāgas was pleased to see the transmission of this text, and sent two nāgas to serve the master.

The legend that the original version was kept in the nāgas’ palace has been well documented in the exegetical tradition of the Huayan school. The legend goes on to say that it was Nāgārjuna who took the shortest version of the Buddhāvataṃsaka-sūtra to the human world. The other famous story about Buddhabhadra is told as an example of stimulus and response. The Chinese emperor asks Buddhabhadra to explain the Buddhāvataṃsaka-sūtra to him, but the foreign master is afraid that he will be unable to express himself properly. He prays for seven days, and during the night he dreams that his Indian head has changed into a Chinese one. As we might expect, the next day he can speak Chinese perfectly. This story is also missing from Buddhabhadra’s official biography in the Gaoseng zhuan. Thus we might

---

266 For a comparative table of the divisions of the introduction by Zhiyan, Fazang, Huiyuan and Chengguan, see Hamar: 1998: 349.
268 For his biography in the Gaoseng zhuan, see T50, no. 2059, 334b26-335c14.
270 Hamar 2007c.
conclude that even if Buddhabhadra is described as a wonder-worker in his biography, these two stories were probably later additions to it.\textsuperscript{271}

It is important to note that these miraculous stories were included in the introduction of Fazang’s commentary. They are related along with the transmission of the text of the \textit{Buddhāvatāmsaka-sūtra}, its commentaries and the Chinese translations, and are thus organically incorporated into the Huayan tradition. It is obvious that in Fazang’s view there was no sharp division between popular religion and the Buddhism of the scholarly elite who were engaged in the exegetical discovery of the \textit{Buddhāvatāmsaka-sūtra}. Fazang is usually depicted as a scholarly monk and credited with founding the Huayan school by elaborating the main tenets of the school on the basis of his predecessors’ work, especially that of his master, Zhiyan, but in his new book on Fazang Chen Jinhua very clearly shows that this is an one-sided evaluation of his role in the religious-political world of the Tang period.\textsuperscript{272} Fazang played an active part as a political advisor, and performed rituals in order to provide rain for agriculture and to quell the Khitan rebellions. In addition, we might surmise that he was even engaged in popular Buddhist practices. Evidently there was no distinction between “popular and elite” for those who practiced Buddhism in the Tang period. Fazang expanded the scope of Huayan Buddhism beyond a mere exegetical school of one of the Buddhist scriptures by incorporating these miraculous stories which reflected certain aspects of Buddhist practice related to the \textit{Buddhāvatāmsaka-sūtra}. As we will see below, these miracles happened during the recitation, copying, or reading of this sūtra.

Chengguan, the fourth patriarch of the Huayan tradition, is famous for his commentary and subcommentary on the \textit{Buddhāvatāmsaka-sūtra}.\textsuperscript{273} Even if he was not a disciple of Fazang, as he was born after Fazang’s death, he was his loyal follower. His main religious/philosophical intention was to create an orthodox Huayan lineage by sorting out some Huayan concepts, for example by creating a classification of teachings, ten mysteries, ten kinds of consciousness only, and so on, out of Fazang’s legacy, and rigorously adhering to them.\textsuperscript{274} He severely criticised Huiyuan 慧苑 (673-743), Fazang’s disciple, for altering Fazang’s teaching, for example, by including non-Buddhist teachings in the classification of teachings.\textsuperscript{275} Because of his criticism, Huiyuan was excluded from the Huayan lineage, even if in fact his work had quite a strong influence on Chengguan. Nonetheless, in response to the

\end{footnotes}
social, religious and political changes at the end of the Tang dynasty, within the framework of orthodoxy, Chengguan himself modified his predecessor’s teachings. All these changes are very clearly reflected in his magnum opus, his commentaries on the *Buddhāvataṃsaka-sūtra*.

In the introduction to his commentary, Chengguan relates twenty-four miraculous stories about the *Buddhāvataṃsaka-sūtra*, however he makes these references more extensively than Fazang, and he establishes six categories of circumstances under which these miracles were experienced: 1. translation (*fanyi* 翻譯), 2. writing commentary (*zaolun* 造論), 3. copying (*shuxie* 書寫), 4. recitation (*dusong* 諦誦), 5. meditation (*guanxing* 觀行), and 6. interpretation (*jiangshuo* 講說). Comparing these with Fazang’s categories in the *Huayan zhuanji*, we can see that Chengguan lumped the two kinds of recitation, *fengsong* 諦誦 and *zhuandu* 轉讀 together under one category, *dusong* 諦誦. The other important difference is the introduction of a new category, meditation. We have to be aware that Chengguan studied under several Chan masters, and even if he was very wary of the radical Chan movements, Chan Buddhism did have a significant impact on his teachings.276 I would suggest that this influence is the reason why he added this new category.

In the first category, he not only repeats the stories about Buddhabhadra, but also records the auspicious sign of the decency of sweet dew after Empress Wu’s 武 (r. 690-705) dream and the trembling of earth after Fazang’s preaching of the new translation of the *Buddhāvataṃsaka-sūtra* by Śikṣānanda.277 While Chengguan does not give accounts of any new miracles in the case of commentary-writing, in the section about copying he refers to a story which is not included in *Huyanjing zhuanji*, but is recorded in *Ganying zhuan*.278

In the fourth section Chengguan mentions five stories in connection with miraculous phenomena that had occurred during the recitation of the *Buddhāvataṃsaka-sūtra*. Four of these stories can be found in the *Huayan jing zhuanji*, the fifth, however is not found in Fazang’s works, but is related in *Ganying zhuan*, where the protagonist is called Huizhao 惠招.279 The story goes as follows:

---

276 Hamar 2003.
277 Chen 2004.
278 For the translation of the story, see chapter Huayan texts in Dunhuang.
279 *Da fangguang fo huayan jing ganying zhuan* 大方廣佛華嚴經感應傳, T51, no. 2074, p. 177, b25-c5.
Huayan. Every day from early morning to late evening he burned incense and recited the chapter Manifestation [of the Tathāgata]. Once suddenly more than ten bodhisattvas appeared from the earth, their manifested golden bodies emitted light while sitting on a lotus seat. They joined their palms, and listened to the recitation of this chapter with great concentration. When the recitation was finished, they became invisible.

It is interesting to note that Fazang does not mention this story in his Huayan jing zhuanji, although Huiyou must have been his fellow-disciple, as they both studied under Zhiyan. It is possible that the story, which is repeated in later sources, originally comes from the Zuanling ji, or from the edited version of Zuanling ji. However, it is also possible that this monk was too close to Fazang, so the story was created only later.

The fifth section contains stories about masters of meditation who experienced supernatural phenomena owing to their practice. Here, even if it is a new category that had not been used by Fazang, Chengguan does not tell any new stories, but simply refers to stories that were told by Fazang as cases related to the recitation and interpretation of the sūtra. The most eminent master in this category is Master Jietuo 解脫 (561-642), who lived in the Foguang monastery (Foguangsi 佛光寺) on Wutaishan in the seventh century. He is credited with the establishment of the Buddha-light meditation based on the Buddhāvataṃsaka-sūtra and is said to have had a vision of Mañjuśrī bodhisattva on Wutaishan, his alleged abode.

In the sixth section, Interpreters we find Du Shun 杜順 (557-640), later regarded as the first patriarch of Huayan masters, even if he seems to have been a master more involved in meditation that exegesis. Fazang also mentions Du Shun in connection with Zhiyan, but describes him as a spiritual monk (shenseng 神僧). Chengguan emphasized that he practiced Huayan, and relates that he was able to cure a person who had been deaf since birth simply by talking to him. He was definitely a wonder-working monk, and thus he was venerated as a manifestation of Mañjuśrī bodhisattva. Chengguan also mentions Fazang as an interpreter of

---

282 On Dushun, and his connection with Zhiyan, see Gimello 1976.
the scripture, and relates that Fazang’s mother dreamed of a strange light, and then became pregnant. Here Chengguan makes a conscious effort to create a lineage for Huayan Buddhism by adding Du Shun to the lineage, which later became widely accepted.

After listing these stories in six categories, Chengguan records the story of Wang Minggan, who was saved from hell because he recited one poem from the *Buddhāvataṃsaka-sūtra*.\(^{283}\) He wants to show the function of the scripture (*gongneng 功能*).\(^{284}\) The Huayan monk cites this story from *Zuanling ji*. Fazang also includes it in his *Huayan jing Zhuanji*, but provides only the family name of the protagonist, saying that we do not know his personal name.\(^{285}\)

e. Conclusion

In this chapter we have seen how the popular traditions of miraculous stories were incorporated into the exegetical tradition of Huayan Buddhism, which seems to have been no more than a highly sophisticated scholarly orientation under the Tang Dynasty. However, Fazang wanted to show that even if translating, commenting and interpreting are the mainstream of Huayan tradition, the practice of Huayan Buddhism cannot be limited to these activities. Fazang tells us many stories of the recitation and copying of the *Buddhāvataṃsaka-sūtra*, which are very effective practices as miraculous events can result from all of them. On the other hand, there is no doubt that Fazang wanted these stories to encourage Buddhist followers to recite and copy the *Buddhāvataṃsaka-sūtra* just like the *Lotus-sūtra*, the *Diamond sūtra*, and so on. Thus his main purpose was not only to record these miracles, but also to spread the Huayan tradition into lower levels of society. Chengguan went on recording these stories in order to establish the lineage of Huayan Buddhism. At the same time he did not forget that Chan Buddhism was becoming ever more popular, so he showed that the practice of meditation is also a part of the Huayan tradition.

III. The Development of Chinese Buddhist commentary-writing: The Chinese exegesis of the *Buddhāvatamsaka-sūtra*
1. The characteristic features of commentaries

In several major cultures of the world (Jewish, Christian, Muslim, Chinese, Indian) commentaries make up a considerable amount of the full corpus of written texts. Holy scriptures are often hazy and ambiguous, or, what is more, fully incomprehensible without additional explanations, and thus, to understand them in the right way is both an important task and a serious challenge for the literati of all times. It is no wonder that the discipline of hermeneutics was born from the interpretations of the Bible. Hermeneutics as a discipline is, on one hand, concerned with the methods necessary for the right interpretation of written texts, on the other hand, recently, it has also become a philosophical school that investigates understanding, conceiving as a universal problem.²⁸⁶

The individual commentators of a certain text are centuries away from each other, and given that they are highly influenced by the way of thinking of their own era, it is only natural that their commentaries should differ to a significant extent. What a commentator essentially does is to reconstruct the meaning of the text with his own knowledge and ideas in mind. Thus, he might involuntarily reveal layers of the text that have previously been hidden from the author himself. It is a question, of course, if all interpretations are correct, or we only accept those that aim strictly at interpreting the original thoughts and intentions of the author. Some commentators incorporate the entire knowledge of their age into their commentaries of the holy scriptures, making their works extend beyond the limits of commentaries, growing into encyclopedias. The famous commentator of the Koran, al-Tabarī (838–923), for instance, provides a summary of the early Islamic culture in his work. Similarly, the commentary on Buddhāvatāṃsaka-sūtra produced by the outstanding Chinese Buddhist monk of the middle Ages, Chengguan, is indeed the storehouse of Buddhist wisdom of his own age, or a Summa Theologiae, using a Christian expression.

The question arises whether or not commentary writing has universal features that are independent of culture as such, and thus can be discovered in all commentaries. Henderson, after having thoroughly studied the above mentioned cultures, does presume the existence of such universal features and defines them as the following: the exegetes suppose that the canon 1) contains all essential truths, 2) is well-organized and coherent, 3) and all the contradictions that might emerge while reading it are merely superficial.²⁸⁷ In the middle Ages the works of

Plato and Aristotle enjoyed widespread popularity because of their comprehensive nature. Confucian intellectuals believed that their canon can be traced back to more different sources, and so they took it for granted that it comprised all possible knowledge available. Jewish and Christian commentaries attach great importance to explaining why certain sections of the *Bible* follow each other in the sequence they do. Likewise, the new term *laiyi* 來意 introduced in Chinese commentaries meaning 'the meaning of appearance', is made use of to explain why the certain sections of *Buddhāvatamsaka-sūtra* appear after each other in the sequence they actually do. Chengguan starts every chapter by explaining how the current section fits into the framework, thus proving that the *sūtra* containing Buddha’s words is not of random arrangement, but that it was Buddha himself who put forward his teachings in this very order.

In Christian tradition, Origen resolves the contradictions of the *Bible* by means of typological symbolism, going as far as to interpret everything allegorically, not accepting anything in the literal sense of the words. Some of the Buddhist teachings do indeed contradict each other. This phenomenon is attributed to the fact that after the death of the founder the development of Buddhist philosophy never stopped, leaving space for the appearance of later teachings, that eventually bear considerable differences to the original ideas. To resolve this contradiction, Mahāyāna Buddhism qualified certain teachings of early Buddhism as *upāya*, 'skillful methods', stating that Buddha employed these methods to teach his less able disciples, gradually preparing them to be able to comprehend the meaning of his more complicated teachings.

2. Commentary literature in China

It is the well-known life philosophy of Confucius 'to only mediate and not create anything new'. From this point of view, we may regard him as the first Chinese hermeneutic. He adopted the cultural orientation that had evolved centuries earlier and had been documented in the *Book of Odes*, the *Book of Documents* and the oracle bones of the Shang-Yin period referring to the cult of the ancestors, and interpreted them in his own age, setting the course for the further development of Chinese culture. Confucius’ approach influenced all later intellectual works, and commentary remained a significant literary genre up to modern times. In fact, it is a frequent phenomenon that later innovators put forth their ideas

---

staying in the shadow of the classics. The most well-known work of the founder of neoconfucianism, Zhu Xi 朱熹 (1130–1200) is a commentary written on the Confucian canon, in which he explores the metaphysical and ontological aspects of the classics.

Commentaries appear as early as in the Zhou-era. The sixth and seventh chapter of the summarizing work of Han Feizi 韓非子 (?–233 B.C.), the famous figure of legism, contains commentaries written on Laozi. Commentaries can be found in the Confucian canon as well. The language of the Annals of Spring and Autumn is extremely succinct, it can hardly be understood in itself. The Zuo zhuan 左傳 elaborates in detail on the historical events only briefly mentioned in the Annals, which makes it an indispensable piece of reading for the proper comprehension of the standard work. The two other commentaries, the Guliang zhuan 穀梁傳 and the Gongyang zhuan 公羊傳, presumably both written during the reign of the Western-Han dynasty, also help with the interpretation of the Annals.

The character jing 經, standing for ‘classical works’, according to Han-time explanations, originally meant the thread holding together the bamboo strips used for writing, while at the same time it also meant a kind of text that is continuous and never-ending, in the sense that it possesses an everlasting message. In the second half of the Western-Han-era there were two different types of commentaries. One of them was a kind of a decoding key, using the yinyang 險陽 and the theory of the five elements to explore the secret meaning of the text. The other type of commentaries interpreted the text word by word on the literal level. The reason this kind of interpretation became absolutely necessary lies in the considerable changes terminology, grammar and society have undergone during the time passed since the birth of the text. An example of the former type is a commentary on the Annals of Spring and Autumn called Chunqiu fanlu 春秋繁露, written by Dong Zhongshu 董仲舒 (179?–104? B.C.), one of the leading figures of Han-time Confucianism. This work explains the classic on the basis of the doctrines of correlative cosmology, advocated by Zou Yan 燹衍 (4th century B.C.) at the end of the Zhou-era. The other category is the so-called zhangju 章句 (‘chapter and verse’) commentaries, that clarify the meaning of every single word through long explanations, and consequently tend to be rather lengthy. One of such works provides a twenty-thousand-word commentary on the first sentence of the Book of Documents.

290 On the commentary literature during the Han dynasty, see Wagner 2000:31-52.
291 Sarah A. Queen argues that this work did not play as important role in reviving Confucianism as most people suppose. Several chapters are later compilations. See Queen 1996.
In the second half of the Han-era the attention of the literati shifted from the *Annals of Spring and Autumn* to the *Book of Changes*, the *Laozi* and the *Annalects*. The new commentators criticized *zhangju* commentaries, stating that they had failed to communicate the message of the text while having been lost in minute details. Commentaries written at this time focused much more on the meaning and the system of the classics. The new method of inserting the comment right after the part of the text commented, instead of placing it after the whole body of the text appeared at this time, and proved to become a standard for later commentary-writing. It was the invention of paper that made this innovation possible, since on bamboo strips it was still insoluble to insert two vertical lines of comment under one vertical line of text. This method ensured an easy distinction between text and comment, thus making the use of commentaries incomparably simpler. Ma Rong 馬融 (79–166) was the first commentator to use this new technique.

Not long after the fall of the Han-dynasty, in 248 Wang Bi 王弼 (226–249) presented his commentary of *Laozi*, which followed the tradition of the exegesis exploring the meaning of the text, but at the same time also set the path for further development. With the downfall of the Han-dynasty the Confucian apparatus of the state also fell apart, and consequently, the institutions of Confucian education (universities, private schools) were closed down as well. Earlier commentaries were born from the notes disciples took of the lectures the master gave on the classics. With the disappearance of the old school system, however, the institutional background for this kind of commentary-writing was lost. We know little of the contemporary reception of Wang Bi’s work, but we do know that this has been one of the most popular *Laozi*-commentaries ever since and up to the present day. This is primarily due to its uniquely individual approach. This commentary has never been classified as part of any philosophical school, but the tradition it established and the school its subsequent thinkers formed was given a name of its own: *xuanxue* 玄學, or the dark learning.

At that time it was customary to question the authenticity of texts. Some attributed the *Book of the Way and Virtue* to more than one author. Wang Bi, however, argued in favor of its unity and coherence, and believed it to be the work of a sole writer. Wang Bi stated that the message of *Laozi* could be summed up in one single sentence, and if one understands this sentence, it becomes easy for him to interpret the individual parts of the text. This sentence is the following: "Emulating the root [by way] of bringing to rest the stem and branches..."
[growing from it] that is all!"\(^{294}\) The *Laozi* shows us the way that leads back to the root, to the *Dao*, propagating the abandonment of the phenomenal world that the *Dao* once created. Wang Bi did not introduce any external ideas in order to be able to reconstruct the meaning of *Laozi*, but used the text itself for this purpose. He interpreted the more obscure passages of the work with the help of the clear sentences. It is interesting here to draw a parallel with the exegesis of the *Bible*, where it was Augustinus (354–430) who first adopted this method.\(^{295}\)

### 3. Indian Buddhist commentaries

Commentaries play an important role in Indian culture as well, since it is often impossible to interpret the ancient texts without additional explanations. Therefore, it is not surprising that we find a large number of commentaries in Indian Buddhist literature. Indeed, Buddha himself also facilitated the rise of commentary-writing, in the way that he never appointed a single heir to his teachings, thereby authorizing this one person to judge which way to interpret his doctrines. After Buddha’s death, councils were summoned together from time to time, with the task of defining Buddha’s main teachings, and the right way of their interpretation. These councils usually ended with a schism, since there were always certain groups that did not submit themselves to the decisions of the council but maintained their original understanding of the doctrines, and eventually, separated themselves from the community.

After the appearance of the Mahāyāna *sūtras*, each master or *bhānaka* specialized himself in one specific work, memorized it, and lectured the followers on its teachings. By this time, the 1st century B.C., writing was already quite widespread in India. In the beginning, it was used only for business purposes, but later they also employed it to preserve ancient texts.\(^{296}\) Unfortunately, the majority of Buddhist literature written in Sanskrit language has been lost, thus, most of the commentaries that have come down to us are Tibetan or Chinese translations. There are ninety commentaries included in the Tibetan-language Buddhist canon, and there is reference to the former existence of another nine in the *Lhan kar-ma catalogue*, which have been lost since the compilation of this work at the beginning of the

\(^{294}\) Ibid. 176.  
\(^{295}\) Grondin 2001.  
\(^{296}\) Gombrich 1990.
9th century. One third of the commentaries were written on the most famous sūtras, the Diamond sūtra, the Lotus sūtra, the Laṅkāvatāra-sūtra and the Samdhinirmocana-sūtra. It is only ten percent of the sūtras that have their corresponding commentaries in Tanjur. The content of the commentaries was highly influenced by some external factors, namely which philosophical school the author belonged to, of what rank he was in the monastery, and consequently, what political role he played in the era.

Vasubandhu, the outstanding figure of the Yogācāra school devoted a whole separate work to the methodology of commentary-writing. In his Vyākyāyukti (Principles of Exegesis) he claims that a commentary must consist of five components. It has to explain (1) the purpose, or intent (prayojana, dgos-pa), (2) the summarised meaning [of the sūtra] (piṅḍārtha, bdsus-pa’i don), (3) the meaning of the words (padārtha, tshig-gi don), (4) connection of the various parts [of the sūtra] (anusaṃdhi, mtshams-sbyor), and (5) objections and their rebuttal (codya parihāra, brgal-lan). Vasubandhu wrote several commentaries, but it was only in the 8th century that the principles he outlined here were fully employed in commentary-writing by Kamalaśīla and some other commentators.

4. The appearance of Chinese Buddhist commentaries

In Chinese Buddhist literature the significance of commentaries is well illustrated by the fact that in the Taishō edition (?) they make up eleven and a half volumes, as opposed to the four and a half volumes of essays expounding the teachings of schools. These commentaries were canonized separately, without the text they comment, which is probably due to their extensive length. This solution rendered the use of commentaries more difficult, but fortunately, the more important works were also published outside the canon on their own, with the body of the text divided up into parts and the commentary inserted in between. The formal and essential criteria of commentary-writing have been formulating gradually, and commentary as a genre attained its final form by Tang-times. This was the form that had become the model to be followed by later generations, no new innovations were born afterwards. As far as their methodology was concerned, commentators relied on two different sources: the commentaries written on Chinese classics, and Indian Buddhist commentaries.

297 Schoening 1996
300 The only detailed study on the Chinese Buddhist commentaries is Ōchō Enichi’s early article in 1937, which was republished in his collected works in 1979. See Ōchō 1979. For a short summary, see Luo 2001: 41-53.
This blending resulted in a peculiar style, which was to become exclusively characteristic of Chinese Buddhist commentaries.

The first commentators were the translators who arrived from abroad, and necessarily were more acquainted with the texts than anyone else. This is well reflected in the several prefaces they wrote to the sūtras. The works produced at the early stages of translation when the newcomers still did not master the Chinese language, nor did Chinese speak the language of the great masters, should be regarded as explanations rather than word-by-word translations. The procedure was the following: the master explained the meaning of the sūtra, and his Chinese assistants took notes of his words. Dharmarakṣa is said to have been the first interpreter, who after having translated Lotus sūtra, attached an oral explanation to it. Among the early interpreters there is Kang Senghui 康僧會 (?–280) and Zhi Qian 支謙 (end of 2nd cent. – beg. of 3rd cent.) who, as we know, have both produced explanations of Buddhist scriptures. It is hard to tell the exact time when written word-by-word commentaries of the sūtras appeared, since they had been formulated much earlier verbally before they were finally noted down. Chinese masters soon joined in into commentary-writing, and the new method of combining Buddhist concepts with corresponding Chinese expressions (geyi 格義) was born and developed side by side with commentary-writing itself.

The earliest remaining commentaries are the following: Yinchiru jing zhu 隱持入經注 303 by Chenhui 陳慧, Ren benyu sheng jing zhu 人本欲生經注 304 by Dao’an 道安 (314–385), Zhu Weimojie jing 注維摩詰經 305 by Sengzhao 僧肇 (384–414), and Jin’gang boruo boluomi jing zhu 金剛般若波羅蜜經注, which is attributed to Sengzhao but was actually written by Xie Lingyun 謝靈運 (385–433). The fifth commentary is embedded in the Damingdu jing 大明度經, translated by Zhi Qian. Similar to this is An Shigao’s (2nd cent.) translation, the Anban shouyi jing 安般守意經, in which the text of the sūtra and that of the commentary are intertwined to such an extent that they are hardly distinguishable. The commentaries of Chenhui, Dao’an and Sengzhao share the characteristic feature of having a preface preceding the commentary, and also that they do not divide the text into chapters. In the titles we find the character zhu 注 referring to ‘commentary’, instead of shu 疏 that became commonly used later on. The former type can be termed as ‘interlinear commentary’ and the latter

---

301 For the history of the translation of Buddhist works into Chinese, see Cao 1989.
302 On Zhi Qian and Kang Senghui, see Zürcher 1959: 43-56.
303 T33, no. 1694.
304 T33, no. 1693.
305 T38, no. 1775.
as 'expounding commentary'. The task of the preface preceding the commentary, just like that of the prefaces attached to translations, was to thoroughly explain the title of the work.

In the preface of Chenhui’s commentary the expression ‘the master says’ (shi yun 師云) is repeated fifteen times, while the phrase ‘according to one of the explanations’ (yi shuo yun 一說云) recurs three times. This testifies that Chenhui also made use of other masters’ commentaries while compiling his own. In the process of interpreting the sūtra he makes references to thirteen other sūtras. It is unique of Dao’an’s commentary that it contains remarks of textual criticism. Early translations prone to be inaccurate in some places, and the Buddhist master pointed out this deficiency. The critical comment ‘the order of the clauses is reversed’ (judao 句倒), for instance, is mentioned five times in the text. He also points out if there were words left out from or added to the translation. According to Jizang 吉藏 (549-623), it was Dao’an who created the three-part-division of the sūtras into prefatory setting (xu 序), main body (zhengzong 正宗), and dissemination section (liutong 流通). These terms, however, cannot be found in Dao’an’s surviving commentaries, thus, it seems likely that they only emerged later. Sengzhao’s commentary on Vimalakīrti-sūtra is in fact the collection of the interpretations of three masters: Sengzhao, Kumārajīva and Daosheng 道生 (360–434). It is commonly characteristic of early commentaries that they lack the kepan 科判, that is, the structural outline of the sūtra; Xie Lingyun’s work already contains this. He divides the Diamond sūtra into three parts: the first deals with the emptiness of objects, the second discusses the emptiness of wisdom, while the third is concerned with the emptiness of the bodhisattva.

5. The appearance of expounding commentaries

With the spread of Buddhism on Chinese soil, Buddhist scriptures became more and more integrated into the common knowledge of literati. As rulers and aristocrats generously supported Buddhist monasteries, Buddhist monks living there gradually monopolized the knowledge of Buddhist literature. Earlier Confucian scholars attempted to explain the meaning of Buddhist works, sometimes adopting terms from Chinese philosophy, now, with the immense growth of Buddhist works in Chinese language, it became rather difficult, as the special skill required for interpreting the abstruse scriptures had to be acquired from specially educated monks in monasteries.
The first extant expounding, or *shu* commentary was written by Daosheng 道生 to the *Lotus sūtra*. Its title is *Miaofa lianhuajing shu* 妙法蓮花經疏. 306 He also composed commentaries to the *Vimalakīrti-sūtra* and the *Nirvāṇa-sūtra*, but they were preserved in works that collects commentaries to the same scripture from different authors. 307 He breaks the tradition of writing a preface (*xu* 序) to the commentary, instead, he directly inserts his preliminary remarks before the text of the commentary. Later the formulation of *Xuantan* 玄談, the Enigmatic Discussion that provides the essential meaning of the *sūtra* and explains the system of Buddhist teachings before the commentary might have been indebted to this work. Here, Daosheng reveals the purpose of writing this commentary, and emphasizes that this *sūtra* originates from the time of Buddha. He claims that the central concept (*zong* 宗) of the *Lotus sūtra* is the Mahāyāna. Prior to him Dao’an and Sengzhao also had the intention to summarize tersely the main teaching of a *sūtra*, but they had not used the term *zong* for this purpose. The Buddhist exegetes must have been influenced by Confucian commentaries while searching for the central concepts of *sūtras*. The practice of summarizing the tenets of a particular *sūtra* paved the way to the classification of teachings (*panjiao* 判教). In addition, during the Eastern Jin Dynasty (317-420) a great amount of *sūtras* were translated into Chinese, thus a system for treatment of their teachings had to be established. In Daosheng’s commentary we find an early classification of teachings, which is a precursor to the elaborate *panjiao* formulated by Tiantai and Huayan masters.

The commentary to each chapter is preceded by a synopsis, and an explanation of the title and the reason the particular chapter is located at that place in the *sūtra* (*laiyi* 來意). Daosheng’s major concern was not the meticulous exegetical examination of some terms, but finding the overall meaning of the scripture. His style is extremely terse, he often has recourse to Daoist expressions. It is interesting to note that he does not refer to any other Buddhist scriptures. In that he certainly bears a resemblance to Wang Bi, who quotes only from Laozi to explain Laozi, because he wanted to explain Laozi using Laozi’s words and not others’. Daosheng must have had the same intention. Every chapter is divided into passages and every passage has a heading. These headings provide the outline of the text, which is called *kepan* or *kewen* 科文. When explaining a passage, he does not repeat the whole passage, but only indicates the beginning of the passage by saying „below this“ (*cixia* 此下), or identifies the passage by quoting the beginning and end, saying from A to B (A *zhì* 至 B). When he

---

306 X 27, 577. For its English translation, see Kim 1990.
307 T38, no. 1775; 37, no. 1763.
furnishes some explanation to the translation of terms, he introduces these remarks with „it is said in Song” (Song yan 宋言 or Song yun 宋云). Song refers to Liu Song dynasty (420-479) during which period Daosheng lived.

One of three great masters of the Liang dynasty (502-557) was Yunfa 雲法 whose commentary to the Lotus sūtra, Fahuajing yiji 法華義記,308 was recorded by his disciples. The introduction, the Xuantan 玄談 consists of two parts: 1. the essential meaning (dayi 大意), which explains the essential teachings of the sūtra and its title, 2. detailed explanation (guangshi 廣釋), which gives three definitions of reason and result. His way of structuring the text of the sūtra became the standard outline (kepan 科判) for the next commentators. Here, the three divisions (xu 序, zhengzong 正宗, liutong 流通), which later became widespread in commentary literature, can be very clearly identified. It is not known where this way of divisions originates from, but probably it could be traced back to the exegetical tradition of the Lotus sūtra. The terms xu and liutong can be found in the sūtras, while the term zhengzong could be adopted from the zongyao 宗要 explanations prevalent in those times.

Establishing the outline of a sūtra, the kepan is a Chinese innovation, which was, probably, formulated during the Song dynasty. This was the time when China was ruled by several dynasties. The Southen dynasties regarded themselves as legitimate rulers of China, while the Northern part of China was conquered by nomadic people who established their own dynasties. This political division of China had influenced the development of Buddhism, in the southern dynasties the Buddhist scolasticism flourished, intellectuals were engaged in studying Buddhist scripture, while in the northern part of China the practical aspect of Buddhism, meditation, monasticism became emphasized. This is the reason kepan as an exegetical method was mostly applied in the Southern dynasties. However, monks living in the Northern part also contributed to the exegetical studies of scriptures. Bodhiruci, for example, translated several Yogācāra works, including some of Vasubandhu’s commentary, which exerted great influence on commentary writing in the Northern territories. The northern commentaries gave priority to Buddhist praxis, searching for the way how scriptures could benefit practice.

What is the advantage of kepan? Through realizing the hierarchy of these small units, the structure of the text, readers can get access to the meaning of the text more easily. After all, the whole text cannot be understood without the correct understanding of the parts. Kezan

---

308 T33, no. 1715.
furnishes a new perspective to reading and understanding Mahāyāna sūtras. It requires constant deconstruction and reconstruction of the text. It stops the overwhelming flow of words which sometimes makes reading sūtras tedious for those who either have not reached the realm from which these scripture originate, or do not have the faith that presupposes a kind of insight into that world. It breaks the text into small pieces in order to reconstruct it by showing the connection between the parts and establishing their hierarchy. It introduces an analytical level that coexists with the original mythological level of the sūtra.

6. The xuantan

During the Sui dynasty (581–618) China had become united, and this change triggered the unification of the Buddhist community. On the other hand, Buddhism also served as an ideology for funding the centralized power. The Sui emperors, Wendi 文帝 (541–604) and Yangdi 燉帝 (569–618) summoned the leading monks to Chang’an to dispute their Buddhist tenets, thus the capital became the center of Buddhist learning and exegesis. Those monks who fled to the Southern returned to the North, facilitating the exchange of ideas between North and South.

In terms of commentary-writing the most significant development was the expansion of introduction, or xuantan 玄談, which became a separate treatise before the commentary. The xuantan was divided into parts which were called gate (men 門) or meaning (yi 義). Following the earlier tradition, the explanation of the title and the classification of teachings is found here. However, a new feature of the xuantan is that many Buddhist scriptures are cited, and the different explanation of various schools are pointed out, and the tenets of rival schools are refuted. The reason the xuantan became more elaborate in this period might be the merge of northern and southern Buddhist teachings, and, in addition, the new translations of Paramārtha in the South and Bodhiruci in the North introduced new ideas which had to be harmonized with the earlier teachings.

From this period we find works which are not word by word commentaries of the sūtras, but rather attempt to give an overall meaning of the text. Two leading monks, the founder of Tiantai school, Zhiyi 智顗 (538–597), and the founder of Sanlun 三論 school, Jizang 吉藏, for example, authored this kind of works (Fahua xuanyi 妙法蓮華經玄義; 309 Weimojing

309 T33, no. 1716.
xuanshu 维摩經玄疏;310 Fahua xuanlun 法華玄論;311 Jingming xuanlun 淨名玄論;312 Fahua youyi 法華遊意). If we look at the content of these works, it turns out that they are very similar to xuantan, but instead of placing them before the commentary as an introduction, probably due their size, they became independent essays. Zhiyi’s The enigmatic meaning of the Lotus sūtra (Fahua xuanyi) is divided into five sections: 1. the explanation of the title (shiming 釋名); 2. discussion of the essence (bianti 辨體), which is the description of the final reality of phenomena; 3. illumination of the central concept (mingzong 明宗), which treats the reasons and results of Buddhist practice; 4. treatment of function (lunyong 論用), which describes the function of wisdom that is able dispel the doubts and awake the faith; 5. classiciati on of teachings (panjiao 判教), which evaluates the ranking of the Lotus sūtra among Buddha's teachings. It is interesting to note that the explanation of the title makes eighty eight pages out of the total one hundred thirty three pages.314 In the course of elaborating the meaning of two characters in the title, the dharma (fa 法) and wonderful (miao 妙), Zhiyi propounds his new teaching, the third truth, the middle truth, which is a sinitic innovation.315

Jizang’s work, Fahua youyi, gives much more information about the exegetical tradition of the Lotus sūtra. It is divided into ten parts or gates (shi men 十門): 1. the reason for the origination of the sūtra (laiyi 來意), which shows the purpose why Buddha taught this sūtra; 2. the central concept of the sūtra (zongzhi 宗旨); 3. explanation of the title (shi mingti 釋名題); 4. classification of the teachings (panjiao yi 判教意); 5. discussion of the exoteric and esoteric teachings (xianmi 显密), where “esoteric” means that the real meaning is hidden for the audience 6. the “three” and the “one” (sanyi 三一), which discusses the relation between the three vehicle and one vehicle; 7. efficient function (gongyong 功用), which claims that given the ten inconceivables of the sūtra, it is endowed with liberating power; 8. transmission of the sūtra (hongjing 弘經), which describes the way the sūtra was transmitted and the persons who were involved; 9. versions of the sūtra (budang 部黨), which compares the various translations; 10. the history of the exegetical tradition of Lotus sūtra (yuanqi 緣起).

96
7. Final stage: Tang period (618-907)

At the beginning of Tang dynasty Xuanzang 玄奘 (602-664) exerted considerable influence on commentary-writing. He first had read the Yogācāra works using the old translations, but he was not satisfied with them, and realized that some important works had not been rendered into Chinese. He thought it is important to know these scriptures to understand Yogācāra philosophy, thus he traveled to India, where he mastered Sanskrit language and Buddhist philosophy at the center of Buddhist learning, the Nālandā university. He realized that the earlier translations sometimes are inaccurate and misleading. Returning home, he translated and retranslated many Buddhist scriptures, advocating the accurate, literal translation of the original works. He accomplished translations which have been the most precise translations in the history of Chinese Buddhism. Nonetheless, they have not become very popular, as their technical, strange language was not very appealing to the Chinese audience. Yet, his translations of Sanskrit grammar and phonetics and the Indian commentaries influenced the work of Chinese exegetes, as through this books Chinese monks got acquainted with Indian logic, argumentation and the method of commentary-writing.

This was the time when the explanation of commentaries, subcommentaries were compiled. For example, after Zhanran 湛然 (711-782), the most famous Tiantai patriarch during the Tang, Tiantai scholars wrote subcommentaries to Zhiyi’s commentary. They authored special works, charts revealing the outline or the structure, or using Robert Buswell’s translation, segmental analysis of his commentaries. This kind of works are called scriptural cartography by Robert Gimello. They might have served as a kind of visual aid for commentators, or subcommentators, although the real use of these works are not known. Usually they are very complicated charts which are not necessarily helpful in understanding the commentary for a modern reader. Zhanran composed charts to three of Zhiyi’s works. The appearance of this genre could be attributed to the increasing importance of the patriarchal lineage by the end of Tang and especially in the Song.

One of the most important Buddhist scholiast of Tang period, and maybe in the history of Chinese Buddhism was Chengguan 澄觀 (738-839), the fourth patriarch of the Huayan 華执行
Chengguan gained high reputation with his commentary. He was summoned to the court, and served as a teacher of several emperors, who acknowledged his outstanding talent by conferring a few titles and offices on him. As the commentary turned out to be too abstruse, he was asked to elaborate it further, and his disciples recorded his further explanations which include a lot of citations from Buddhist and non-Buddhist literature. His work is considerable voluminous. The eighty fascicle *Buddhāvatamsaka-sūtra* runs through 444 pages in the Taishō edition of the Chinese Buddhist canon, which is almost 1500 pages in Cleary’s English translation. Chengguan’s commentary and subcommentary are 460 and 700 pages, respectively. The three works altogether consists of more than 1600 pages, which occupy one and half volumes of the Taishō canon. If we add the characters in these three works it totals up to around 744,000. Although on the request of high officials, he authored shorter works to summarize the teachings of the *Buddhāvatamsaka-sūtra*, his opus magnum is undoubtedly his commentaries, that is the reason he is sometimes called the commentator. In terms of the history of commentary-writing in Chinese Buddhism, his work represents a full-fledged commentary. The *xuantan* section is very elaborate, including the following ten gates.

The first section explains the circumstances of establishing the teachings (*jiaoqi yinyuan* 教起因緣), clarifying ten causes (*yin* 因) and ten conditions (*yuan* 緣). The second section, the contents of the Buddhist Canon and teachings (*zangjiao suo she* 藏教所攝) treats the contents of the Tripitaka and the Indian and Chinese masters’ various classification systems of Buddhist teachings. The third section, the division of doctrines (*yili fenqi* 義理分齊), summarizes the doctrines of perfect teaching, i.e. Hua-yen. The fourth section describes the ability of those living beings who can understand the teachings (*jiaosuo beiji* 教所被機). The fifth section, the different levels of teaching (*jiaoti qianshen* 教體淺深), discusses the Buddhist teachings from Hīnayāna to Huayan. The sixth section explains the cardinal purport of the *Huayan jing* according to various schools of Buddhism and especially the Huayan school (*zongqu tongju* 宗趣通局). Chengguan, like Zhiyan and Fazang, stated...
that the central concept of the Buddhāvataṃsaka-sūtra is the dharma-dhātu dependent arising (fajie yuanqi 法界緣起), which reveals the interrelatedness of all phenomena. The seventh section, the versions and chapters (bulei pinhui 部類品會) lists the different versions and the chapters of the Huayan jing, and those chapters which survive as separate works, as well as the Indian and Chinese commentaries on it. The eighth section, the translations (chua nyi gantong 傳譯感通), gives information on the translators’ names, the date and the length of translations of Huayan jing, and describes the "wondrous" events which occurred during the time the translations were executed. The ninth section, the general explanation of the title of the Huayan jing (zongshi mingti 總釋經題), explicates the seven characters of the title one by one and together. The tenth section, the various divisions of the text (biejie wenyi 別解文義), explains how different masters divided the Huayan jing into parts.

The Xuantan section was edited as a separate work and later further commentaries were written to it. This is called Huayan jing shuchao xuantan 華嚴經疏鈔玄談.\textsuperscript{318} This way the subcommentary has further subcommentaries. It has a very elaborate and complicated system of kepan, outline, thus later a chart was also composed. It is titled Huayan jing shu kewen 華嚴經疏鈔科文.\textsuperscript{319} If we had only the texts in Taishō, it would be very difficult to read the sūtra, commentary and subcommentary together. To facilitate this task, modern editions combine the three works into one, arranging according to the passages of the sūtra. The latest project of this kind was finished a few years ago by the Taiwanese Huayan society. The final work consists of 20 volumes.

\textsuperscript{318} X 05, no. 232.
\textsuperscript{319} X 05, no. 231.
8. Hermeneutical methods

I am going to show how Chengguan made his comments in order to reveal the hidden meaning of the text. The chapter we selected from this voluminous scripture is of great interest on its own right. The original title of the sūtra, according to Professor Takasaki Jikidō's reconstruction, is Tathāgata-utpmatisambhava-nirdeśa-sūtra.\(^\text{320}\) This is an early Mahāyāna sūra that was probably composed in Central Asia around AD 1-2. century. It was circulated before the compilation of the Buddhāvatamsaka-sūtra, as is attested by Dharmarakṣa's early translation titled Rulai xingxian jing 如來興顯經. The title of this chapter in the sixty and eighty volume Buddhāvatamsaka-sūtra is Rulai xingqi pin 如來性起品 and Rulai chuxian pin 如來出現品, respectively. The fourth Chinese version, Dafang guang rulai xingqi weimizang jing 大方廣如來性起微密藏經, lost in China, has been discovered recently in Nanatsudera of Nagoya along with other important scriptures.\(^\text{321}\) This sūtra describes the Tatahāgata's appearance in the world, the features of his body, speech and mind, as well as his activity in the world. The importance of this work, from the aspect of the development of Buddhist philosophy, lies in being a precursor to the tathāgatagarbha theory. Moreover, it also had a great impact on Huayan philosophy, as one of the central concepts of the school, the nature-origination (xingqi 性起) is associated with this chapter.

As Chengguan remarks, the special feature of this sūtra is that it draws a parallel between the outer world and Buddha's spiritual world. For example, Buddha's wisdom does not rely on anything like space in the world. However, the parallels are not so clear everywhere in the text, therefore Chengguan has to make a great effort to clarify them. Describing Buddha's body, the sūtra compares it to the sun from which infinite living beings receive benefit. The text lists seven benefits from the sun and ten benefits from Buddha's body.

\[
\begin{align*}
\text{(A)} & \text{ it disperses the darkness and gives light}, \\
\text{(B)} & \text{ dries up moisture}, \\
\text{(C)} & \text{ causes plants and trees to grow}, \\
\text{(D)} & \text{ matures crops}, \\
\text{(E)} & \text{ permeates the sky}, \\
\text{(F)} & \text{ causes lotuses to bloom}, \\
\text{(G)} & \text{ allows travellers to see the road}, \\
\text{(H)} & \text{ allows people to do their work}.
\end{align*}
\]

When the sun comes out, infinite living beings all receive its benefits – (A) it disperses the darkness and gives light, (B) dries up moisture, (C) causes plants and trees to grow, (D) matures crops, (E) permeates the sky, (F) causes lotuses to bloom, (G) allows travellers to see the road, (H) allows people to do their work – because the orb of the sun radiates infinite beams of light everywhere. The sun of knowledge of Buddha is also like this, benefiting sentient beings everywhere by infinite works – (1) destroying evil and producing good, (2) breaking down ignorance and creating knowledge, (3) benevolently saving, compassionately liberating, (4)

\(^{320}\) Takasaki 1958.

\(^{321}\) For the bibliographical information on these scriptures, see Hamar 2003a: 339-341.
causing growth of faculties, powers, and elements of enlightenment, (5) causing beings to develop profound faith, [expelling impure thoughts,] 322 (6) enabling them to see inevitable cause and effect, (7) fostering in them the celestial eye to see where beings die and are born, (8) causing their minds to be unimpeded and not destroy roots of goodness, (9) causing them to cultivate illumination by knowledge and open the flower of awakening, (10) causing them to determine to fulfill their fundamental task. 323

Chengguan relates them and comments on their relationship in the following way.

(A) disperses the darkness and gives light
(1) destroys evil and produces good
(2) breaks down ignorance and creates knowledge
Commentary:

The first two [benefits of Buddha's body] are parallel with the first of the parable, and show the difference between this world and transcendental world.

初二合初句世出世異故。 324

(B) dries up moisture
(3) benevolently saving, compassionately liberating
Commentary:

Buddha saves beings from the stream of the four swift torrents, 325 and presents them with the transcendental happiness. He saves the followers of two vehicles from sinking in the water of meditation, and causes them to taste the joy of bodhi. In both cases, he dries beings [like the sun].

322 This is missing from Cleary's translation, I have added it.
323 Cleary 1993: 983-984.
324 Da fangguang fo huyanjing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 875, b17.
325 The four swift torrents (catur-oghā) are the defilements that sweep away all virtues: 1. desires 2. mental defilement such as attachment 3. wrong views 4. ignorance.
(C) causes plants and trees to grow

(4) causing growth of faculties, powers, and elements of enlightenment

Commentary:

Due to the different practices on the way to enlightenment the plants and trees of the three vehicles will grow.

四道品通長三乘草木。\(^{327}\)

(D) matures crops

(5) causes beings to develop profound faith and expels impure thoughts

Commentary:

Faith has two meanings. On one hand, completing the meaning above, faith calls all teachings into life, on the other hand "maturing" implies that faith can bring someone to the world of the Tathāgata.

五信有二義。一成上義。信能增長一切法故。二合成熟信。能必到如來地故。\(^{328}\)

(E) permeates the sky

(6) enables them to see inevitable cause and effect

(7) fosters in them the celestial eye to see where beings die and are born

Commentary:

The sixth and seventh [benefits from Buddha] are parallel with [that the sun] "permeates the sky". The wisdom that understands the Four Noble Truths and the cause and result, the three clarities, as well as the wisdom of ten powers are like the sun that makes the space bright.

六七二句合廓徹虛空。一得見聞四諦因果智。二得三明十力智如空有日廓淨照徹故。\(^{329}\)

(F) causes lotuses to bloom

(8) causes their minds to be unimpeded and not destroy roots of goodness

(9) causes them to cultivate illumination by knowledge and open the flower of awakening

\(^{327}\) Da fangguang fo huyanjing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 875, b19-20.

\(^{328}\) Da fangguang fo huyanjing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 875, b20-22.

\(^{329}\) Da fangguang fo huyanjing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 875, b22-24.
Commentary:

The eighth [benefit from Buddha] has two meanings. As the mind becomes unimpeded, above it pervades the space, as the roots of goodness are unharmed, below the lotuses are blooming. Just like if the red flower of the lotus does not have sunshine, it will die in the shade without doubt, the roots of goodness of three vehicles can stay alive, if they meet the sun of wisdom. The ninth [benefit from Buddha] is parallel with the “blooming lotuses”. Formerly it is said that the roots of the lotuses that have already been blooming remain unharmed, but here the lotuses that have not bloomed yet, now start to bloom.

八有二義。令心無礙成上徹空。不壞善根成下蓮華。如赤蓮華不遇日光翳死無疑。三乘善根若遇智日則便不壞。九正合開華。上已開不壞。今未開今開。330

(G) allows travellers to see the road
(H) allows people to do their work
(10) causes them to determine to fulfill their fundamental task.

Commentary:

The tenth [benefit from Buddha] is correspondent to the last two parts [of the parable]. After taking the bodhisattva vow, they see the great way, carry out their fundamental task, and do their job at home.

十合後二句。發菩提心即見大道。成就本行是辦家業。331

In these examples, Chengguan not only draws parallels between the two lists, but also introduces several important Buddhist terms and refers to other scriptures. He tries to contextualize the sūtra into the Buddhist knowledge and practice of his days. In his Commentary and especially in his Subcommentary, he often quotes from other scriptures, treatises, Chinese Buddhist and non-Buddhist works. He even has philosophical arguments with other Buddhist schools to prove his own Huayan stance.332 His commentary is meant not only to decode the text of the sūtra, but also to provide the background which helps understanding the text, or, from a modern hermeneutical point of view, gives us some clues about the knowledge that presupposed the understanding of a sūtra in Tang China. His commentary could be called an Encyclopedia of Buddhist knowledge or rather Summa.

---

331 Da fangguang fo huyanjing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 875, b28-29.
332 Concerning the question whether Buddha has a mind or not, he shows the various arguments of Faxingzong 法性宗 and Fuxiangzong 法相宗. See Hamar 2003a.
Theologiae as he shows the teachings of Buddha from a Huayan aspect, never forgetting that
the most perfect teaching is his first sermon, the *Buddhāvataṃsaka-sūtra*.

9. Impact of indigenous thought on exegesis

Sometimes it is perplexing to read Chengguan’s commentary as his perfect mastery of
Chinese literary tradition and his frequent allusions to Daoist works reveal not only his intent
of using Chinese philosophy as an *upāya* in proselytizing Chinese elite but also his personal
fascination with Chinese tradition. It is no wonder that Kamata Shigeo affiliated him with
Sengzhao 僧肇, whose work, the *Zhaolun*, is a masterpiece of applying Daoist works for
Buddhist purpose. I show here one example how masterfully Chengguan applied Daoist
terms and reconstructed them in the Buddhist context. The very first sentence of the preface
of his commentary on *Huayan jing* runs as follows:

“Going and returning have no limits, movement and quiescence have one source. It includes all
subtleties and yet it has surplus, it transcends speech and thinking thus it is outstanding. This is the
dharma-dhātu!”

It is not difficult to recognize the similarity with the first chapter of the *Daode jing*. He
even cites the terms “all subtleties”. However, the subject of this sentence is not the Dao, but
the *dharma-dhātu*. The term *dharma-dhātu* has several meanings in Buddhist sources:
principle of truth, one of the eighteen *dhātus* in Hinayāna, and Absolute or *tathāgatagarbha*
in Mahāyāna. In the *Buddhāvataṃsaka-sūtra* it denotes the world after the experience of
enlightenment, i.e., the world how a Buddha sees it. This whole *sūtra* is believed to describe
this crucial experience, thus it is reasonable that Chengguan explains the meaning of this term
at beginning of his Magnum Opus. This one sentence is painstakingly explained in his own
Subcommentary through almost two pages in its Taishō edition. It is worth reading some
portions of the Subcommentary, as these shed light on the way how Daoist expressions get
deeply immersed in Buddhist meaning.

---

333 For a list of those Buddhist and non-Buddhist works that Chengguan cites, see Appendix.
334 Kamata 1965: 338-357.
335 *Da fangguang fo huayan jing shu*, T35, no. 1735, p. 503, a6-7.
He applies to this sentence the three rubrics of the *Awakening of Faith in Mahāyāna*, this apocryphal scripture that made a great impact on the development of Chinese Buddhism. These are essence (ti 體), feature (xiang 相), and function (yong 用), which are called the three kinds of greatness (sanda 三大). Each illustrates one aspect of the *dharma-dhātu*.

This passage is divided into five sentences

1. 往復無際
   Going and returning have no limits: this is the function (yong 用) of *dharma-dhātu*.

2. 動靜一源
   Movement and quiescence have one source: this is the essence (ti 體) of *dharma-dhātu*.

3. 含眾妙而有餘
   It includes all subtleties and yet it has surplus: it is the features of *dharma-dhātu*.

4. 超言思而逈出者
   It transcends speech and thinking and it is outstanding: it merges and eliminates (*rongfo* 融拂) the above three kinds of [greatness].

5. 其唯法界歟
   It is the *dharma-dhātu*: it possesses all the above qualities.

略為三義:

a. The first aspect is when it is explained from the aspect of both delusion and enlightenment 一雙約迷悟說:

If somebody is deluded concerning the *dharma-dhātu*, he/she goes to the six destinies. This is going and movement. If somebody becomes enlightened concerning the *dharma-dhātu*, he/she returns to the one mind. This is coming and quiescence.
b. From the aspect of delusion

二唯約妄說:

In addition it has two meanings. Vertically discussing going and coming: the past has no beginning, the future has no end. There is no former and later. Horizontally discussing: the basis of delusion is great and limitless.

復有二義。一竪論去來。過去無始。未來無終。無初後際。二約橫說。妄念攀緣浩無邊際。

c. Returning to the source

返本還源說:

The first is a comprehensive definition, the second is the aspect of delusion when it only goes but it does not come. And here it only returns. It returns to the source. This is the meaning of quiescence.

初義是總。第二約妄惟往非來。今此唯復。復本源故。斯即靜義。

That is why the *fu gua* of the Zhouyi says: “Do we not see in Fu the mind of heaven and earth?”

If it goes, it must return. The *tai gua* says: “‘There is no going away so that there shall not be a return’ refers to this as the point where the interaction of heaven and earth takes place.”

故周易復卦云。復其見天地之心乎。然往必復。易泰卦云。無往不復。天地際也。

In the *Mañjuśrī explains the ineffable nature of the realm of Tathāgata sūtra* … the cultivation of the path of bodhisattva is designated as it has going and returning.

故文殊師利所說不思議佛境界經中。…… 有往有復名修菩薩道。

The going is to observe what the sentient beings like, and the returning is to teach the Dharma according to their needs, the going is to enter *samādhi* by himself, the returning is to have other beings entered *samādhi*, etc.

觀諸眾生心所樂欲。名之為往。隨其所應而為說法。名之為復自入三味名之為往。令諸眾生得於三味。名之為復。

[Another eight pairs follow in the text]

The explanation says: In the above ten pairs the first part always refers to self-benefit, which is regarded as “going” because [the bodhisattva] goes to *nirvāṇa* through it; the second part is the benefit for others which is regarded as returning because [the bodhisattva] returns to *samsāra* to convert living beings. Though here the words ‘going’ and ‘returning’ are applied, in fact we can

---

state generally that it is to describe the returning to source or returning to the original mind. Here the limitless has two meanings: 1. the ocean of the deeds of bodhisattva is vast and limitless, 2. the principle that they describe is limitless.

The above three aspects [a,b,c] are the function of the dharma-dhātu
然上三義。皆法界用矣。

2. movement and quiescence have one source.
動靜一源

This is the essence of dharma-dhātu.
法界體也

a. The first aspect is when it is explained from the aspect of both delusion and enlightenment 約迷悟者

The movement is going and the quiescence is returning. Although delusion and enlightenment are two gates, the object of delusion and the real nature have one source. The source that is not two is the essence.
動即往也。靜即復也。動靜迷悟雖有二門。所迷真性一源莫二。莫二之源即是體也。

b. from the aspect of delusion 二對唯妄者。

Movement is going and returning, quiescence is the essence, i.e., emptiness, as the [nature of] mutually originated [dharman] is stillness. ....In every movement quiescence has to be searched, thus though it is movement but it is eternal quiescence. Therefore movement and quiescence have different names, but their sources are not two. This source that is not two is the one essence.
動即往也。有去來故。靜即體虛。相待寂故。……必須窺於諸動故。雖動而常靜。則動靜名殊。其源莫二。莫二之源。即一體也。

c. returning to the source 三對返本還源說。
To benefit oneself is quiescence, and to benefit others is movement. Two benefits lead together to converting and non-converting, thus the one source that is the essence of dharma-dhatu is not lost. …Movement and quiescence is non-obstructed. This is the one source.

自利靜也。利他動也。二利相導化而無化。則不失一源。為法界體也。動寂無礙為一源也。

2. 含眾妙而有餘

It includes all subtleties and yet it has surplus.

It is the greatness of the features of dharma-dhatu.

法界相大也。

Inside the darkness all wonders are found. The pure dharma-dhatu is dark, and able to contain the immeasurable qualities of nature. The greatness of subtle features is that which is contained. Features are dependent on nature, and there is nothing that the nature does not include. Thus this is called “to contain”. There is nothing outside the nature-essence, and the feature-qualities have names. A category that has a name cannot pervade the essence that does not have outside. That is why it says “it has surplus”.

謂杳冥之內眾妙存焉。清淨法界杳杳冥冥。以為能含恒沙性德。微妙相大。以為所含。相依乎性。性無不包。故稱為含。性體無外。相德有名。有名之數不能遍無外之體。故云有餘。

The greatness of feature has two aspects (yi 义). From the aspect of nonemptiness, it refers to the immeasurable qualities of nature. This is the interpretation of the common teaching (tongjiao yi 同教意). From the aspect of nonobstruction of phenomena, it refers to the self-completeness of the features of the ten mystical gates (shixuan 十玄). This is the interpretation of the distinct teaching (biejiao 別教).

然此相大略有二義。一約不空具恒沙性德故。此是同教意。二約事事無礙。十玄之相。本自具足。即是別教之意也。

The term „all wonders” is used by Laozi. The Scripture of the Dao says:

然眾妙兩字。亦老子意。彼道經云。

The Dao that can be told of is not the eternal Dao;
The name that can be named is not the eternal name.
The Nameless is the origin of Heaven and Earth;
The Named is the mother of all things.

Therefore let there always be non-being so we may see their subtlety
And let there always be being so we may see their outcome.
The two are the same,
But after they are produced, they have different names.
Deeper and more profound,
The door of all subtleties.

道可道非常道
名可名非常名。
無名天地之始，有名萬物之母，
常無欲以觀其妙，常有欲以觀其徼。
此兩者，同出而異名，同謂之玄。
玄之又玄，眾妙之門。

The explanation: according to this meaning the voidness and spontaneity (xuwu ziran 虛無自然) are the profound subtleties. In addition, to rub out the traces is called “profound again.” This is the desireless towards desireless (wuyu yu wuyu 無欲於無欲). The myriad thing originate from this.

Thus, it says „the door of all subtleties.” Now we borrow the words, but not the meaning. According to our interpretation the one real dhāraṇa is the essence of all subtleties. The features that are identical with the essence are „all subtleties”

4. 超言思而道出者
it transcends speech and thinking thus it is outstanding

It merges and eliminates (rongfo 融拂) the above three kinds of [greatness]. 融拂上三也。

“To merge” means that the three and one mutually include each other. To eliminate means that the three and one both become quiescent. What does transcend mean? This is to say that principle is perfect while speech is one-sided. Once speech comes to being, principle is lost. This dhāraṇa does not have features that can be thought of, thus thinking leads to confusion. It transcends thus it is said to be outstanding.

Sengzhao said: “You wish to speak with your mouth, but words are destroyed; you wish to grasp it with thinking, but thoughts are eliminated.” Therefore it surpasses the presentation of words and symbols. If you want to discuss its features and function, they are quiescent like essence. If you want to discuss the quiescence of its essence, the features and function are confused. They are one but three as their features are not identical. They are three but one, as their essence is not two. Three and one are nonobstructed, they become eliminated together. Their existence and nonexistence are not confined, how could they be expressed by the symbols of speech? Therefore it says “outstanding”.

340 Chan 1963: 139.
故肇公云。口欲談而詞喪。心將緣而慮亡。則逈出於言象之表矣。何者。欲言相用即同體寂。欲謂體寂相用紛然。即一而三相不同。即三而一體無二。三一無礙互奪雙亡。存泯莫覊。豈言象之至。故云逈出。

When we negate speech and thinking by using the terms “eliminating and exceeding”, this is not to say that no-speech can become the foundation. Thus the sūtra says: “Although speech cannot be relied on, no-speech cannot be clung to.” 341 The features of speech originally quiescent, thus eliminating and exceeding must be eliminated too. In this way the dependent connection between speech and no-speech becomes quiescence, too. Thus by saying “outstanding”, the traces of speech and no-speech are wiped out.

又借斯亡絕以遣言思。非有無言可為棲託。故下經云。雖復不依言語道。亦復不著無言說。況言相本寂亡絕亦亡。斯則言與亡言相待亦寂故。假逈出之稱。以拂言與亡言之迹矣。

5. 其唯法界歟

This is the dharma-dhātu.

It concludes with that where dharmas belong to. It possesses all the above qualities.

結法所屬屬法界也。謂具上諸德獨在於法界矣。

---

IV. The Yogācāra and Tathāgatagarbha teachings in the *Buddhāvataṃsaka-sūtra* and the Huayan school
1. The reception of Yogācāra in China and its position in Huayan *panjiao*

Huayan Buddhism is regarded as one of the most philosophical schools of Chinese Buddhism, representing the elite-scholar Buddhism under the Tang dynasty. Its vision of truth is based on the *Buddhāvataṃsaka-sūtra*, the scripture that Huayan masters studied, explained and commented intensively throughout their lives. This was the common vocation of these monks, which gradually created a lineage of the Huayan tradition, a succession of exegetes who believed that the *Buddhāvataṃsaka-sūtra* was the consummate teaching of Buddha preached directly after his enlightenment under the bodhi tree. Although the base text of Huayan Buddhism was the *Buddhāvataṃsaka-sūtra*, classified as the round or perfect teaching in the classification of doctrines (*panjiao* 判教), other teachings, such as Madhyamaka, Yogācāra, and Tathāgatagarbha had exerted a great influence on the way Huayan scholars apprehended and interpreted this Mahāyāna scripture. In this chapter we are going to discuss how Yogācāra philosophy was evaluated in the context of Huayan Buddhism, how the Huayan masters classified the consciousness-only teachings, and finally how they applied this philosophy in revealing the purport of the *Buddhāvataṃsaka-sūtra*, formulating its own distinctive school, the round teaching of one vehicle.

a. Background: old and new schools of Yogācāra in China

It is widely known that Huayan Buddhism is greatly indebted to the first advocates of Yogācāra philosophy in China, the masters of the Dilun and Shelun schools. These schools agreed that the ultimate level of consciousness is pure, untainted.\(^\text{342}\) Jingying Huiyuan 淨影慧遠 (523-592), the famous Dilun master, posited that the ālayavijñāna is the true, pure consciousness on which the defiled world is dependent.\(^\text{343}\) Paramārtha (499-569), the translator of many important Yogācāra works and the founder of the Shelun school, proposed the existence of the ninth level of consciousness, a pure consciousness, the *amalavijñāna*.\(^\text{344}\) Their positions were based on Indian scriptural sources, such as for instance the *Laṅkāvatāra-sūtra*, a significant and influential Yogācāra scripture, which claims that *tathāgatagarbha* is identical with the ālayavijñāna, implying that the mind is ultimately pure. The exegetical

\(^{342}\) Liu 1982: 189.  
\(^{343}\) Liu 1985: 365.  
\(^{344}\) For Paramārtha’s view on consciousness, see Paul 1981.
analysis and interpretations of sometimes contradictory Indian sources led to the appearance of the Awakening of Faith, one of the most influential apocrypha in the history of Chinese Buddhism. This work had established the ontological and soteriological framework of Chinese Yogācāra that was crucial for Huayan thinkers in establishing their own ontological and soteriological theories. Its thesis that the one mind has two aspects, the samsāra and nirvāṇa seemed to solve the philosophical problems inherent in Yogācāra and Tathāgata-garbha literature. Nonetheless, one major problem has not been solved, that is the ontological origin of ignorance that is said to cause the essentially pure mind to become tainted in the course of creating the phenomenal world.

This view on the existence of pure consciousness was challenged by Xuanzang (600-664) who in accordance with his education in classical Yogācāra in India propounded that the final reality, the ālayavijñāna, contains both pure and impure seeds, and consequently the pure entity behind the phenomenal world cannot be substantiated. For him the pure mind was not an ontologically existent entity, but it was realised soteriologically through the process called turning about of the basis (āśraya-parāvṛtti), which is the experience of enlightenment when ālayavijñāna is transformed into wisdom. His newly imported doctrines not only refuted the earlier ontological speculations, but also denied the universality of Buddhahood which had become the mainstream of Chinese Buddhism. Xuanzang, however, argued that some living beings, the icchantikas, lack the potential to become a Buddha.

b. The position of Yogācāra in panjiao of Huayan

This was the intellectual and religious background for the founding of the Huayan tradition, which had to make a response to this new branch of Yogācāra in order to defend the achievements of the eminent predecessors, and to substantiate its own existence. This task was first taken up by Zhiyan (602-668), the second patriarch of the Huayan school, who was Xuanzang’s contemporary, and thus an eyewitness to the arising conflict between the old and new schools of Yogācāra. That is the reason why he wrote most of his works relatively late, near the end of his life. Given that Xuanzang was a monk of high erudition who had the prestige of having studied in India under famous masters and enjoyed the lavish support of

the Chinese emperor in his activity of translating the scriptures he had brought from India, Zhiyan’s position must have been extremely difficult.

Zhiyan was the first Huayan master to formulate his own panjiao system. He had proposed different ways to classify the various teachings, but the system of five teachings became the standard panjiao of Huayan Buddhism. The five teachings are Hīnayāna, the elementary teaching of Mahāyāna, the advanced teaching of Mahāyāna, the sudden teaching, and the round teaching.\(^{347}\) For our discussion the second and third teachings are relevant, as they refer to Xuanzang’s new Yogācāra and the old Yogācāra of Dilun and Shelun, respectively. Zhiyan’s method of defending the old tradition was its elevation to a higher rank, arguing that the elementary teaching only reveals the unreality of self and physical objects whereas the advanced teaching shows the ultimate reality, the tathatā, or tathāgatagarbha.\(^{348}\) It is important to note that the Madhyamaka philosophy was also regarded as the elementary teaching. This invention of elementary and advanced Mahāyāna laid the ground for the next Huayan masters to elaborate their own theories. In doing so, however, the interpretation and evaluation of these teachings altered in accordance with their individual philosophical and religious persuasions.

Fazang 法藏 (643-712) inherited from his master, Zhiyan, not only the panjiao of five teachings but also his detestation toward the new Yogācāra school. It is reflected in the name he gave to this school, Faxiangzong, which implies that it treats only the characteristics of the dharma. He argues that the essence of the elementary teaching lies in the concept of ālayavijñāna, that is the ultimate source of all kinds of existence and contains all the karmic seeds. He criticizes this school for regarding ālaya apart from the tathāgatagarbha. Fazang的主要 identifies Xuanzang’s school with the elementary teaching, but sometimes he also mentions Madhyamaka, the school that maintains that the dharmas are conditionally originated and empty of self-nature. In contrast, the final teaching holds that the tathatā does not exist apart from conditions, but actively takes part in the origination of phenomenal world.\(^{349}\) This relationship is described, in typical Huayan terminology, as the interpenetration of principle and phenomena (lishi wuai 理事無礙). However, in Fazang’s panjiao system the interpenetration of phenomena (shishi wuai 事事無礙) plays a more significant role, as it is said to be the teaching propounded by the Buddhāvatamsaka-sūtra.\(^{350}\)

\(^{347}\) Liu 1981: 10-47.
\(^{349}\) Liu 1981: 23.
Chengguan 澄觀 (738-839) created the orthodoxy of the Huayan lineage by severely criticizing Huiyuan 慧苑 (673-743), the disciple of Fazang, for modifying Fazang’s *panjiao* system.\(^{351}\) He applied most of the philosophical concepts put forward by Fazang, thus he preserved the classification of five teachings. Establishing Huayan orthodoxy, however, did not prevent him from changing or elaborating further his predecessors’ teachings, or even formulating his own theories. His most well-known contribution to Huayan philosophy is the four *dharma-dhātu*: *dharma-dhātu* of phenomena (*shi fajie* 事法界), *dharma-dhātu* of principle (*li fajie* 理法界), *dharma-dhātu* of nonobstruction of phenomena and principle (*lishi wuai* 理事無礙法界) and *dharma-dhātu* of nonobstruction of phenomena (*shishi wuai* 事事無礙法界).\(^{352}\) Fazang emphasized the nonobstruction of phenomena, the interrelated relationship among all phenomena of the universe that is described by the famous metaphor of Indra’s net. The nonobstruction of phenomena and principle was only important for laying the ground for the nonobstruction of phenomena. As all phenomena could be traced back to the same source ontologically, thus their mutual identity (*xiangji* 相即) and mutual interpenetration (*xiangru* 相入) were substantiated. However, Chengguan attributed much more significance to the nonobstruction of principle and phenomena in its own right, as the link with the ultimate source of reality.\(^{353}\)

---

2. Passages connected to Yogācara and Tathāgatagarbha in the *Buddhāvatamsaka-sūtra*

a. Three realms are mind mind only

i. The original passage

One of the most famous teaching of the *Buddhāvatamsaka-sūtra* is that the three realms are mind only. This occurs in the following passage of the sixty fascicle version of the sūtra:

The three realms are illusion, created only by mind, the twelve chains of dependent arising rely on mind.

三界虛妄但是心作；十二緣分是皆依心

The same passage in the eighty fascicle version:

All existent things in the three realms are only one-mind. Thus the Tathāgata explained that the twelve branches of existence are established relying on one-mind.

三界所有, 唯是一心。如來於此分別演說十二有支，皆依一心，如是而立。

The Sanskrit and Tibetan versions of this passage are very close to the Chinese renditions. It is tempting to interpret this text as an evidence for the presence of Yogācāra, or even the Absolute mind in the *Buddhāvatamsaka-sūtra*, however, it is quite clear from the context that here mind is deluded due to ignorance about the Absolute truth, and this ignorance leads to the existence, death and suffering, which are described by the twelve chains of dependent arising. The *gāthā* section of the sixty fascicle version unequivocally attributes tainted aspect to mind:

354 *Da fangguang fo huayan jing* 大方廣佛華嚴經, T09, no. 278, p. 558, c10-11.
355 *Da fangguang fo huayan jing* 大方廣佛華嚴經, T10, no. 279, p. 194, a14-15.
356 For a comparative study of the various versions of this passage, see Tamaki 1960.
One understands that the three realms
Exist only from the craving mind,
knows that the twelve chains of dependent arising
Exist in one-mind.

Similarly, birth and death
Arise only from mind,
If mind becomes extinguished,
Birth and death will come to an end.\(^{357}\)

As existence comes into being due to the craving mind, we can be certain that one-mind mentioned in this passage is not the Absolute One-mind advocated by the famous Chinese apocryphal scripture, *The Awakening of Faith*.\(^ {358}\) It is interesting to note that mind (citta) is predicated as the source of existence, and it sets the twelve chains of dependent arising in motion. However, consciousness (vijñāna) is the third member of the dependent arising, consequently it also gains its existence from the mind. It is evident that in later Yogācāra the meanings of citta, vijñāna and manas were distinct, but in the Buddhāvataṃsaka-sūtra they seem to have the same denotation.\(^ {359}\) Being so, what does one-mind mean? It could refer to a previous existence, which accumulates karmic seeds for the future vijñāna and existence. As the stanza says, if this mind becomes extinguished, the next vijñāna, existence and death will not occur.

### ii. Interpretations of the passage

\(^{357}\) *Da fangguang fo huayan jing* 大方廣佛華嚴經, T09, no. 278, p. 560, a11-14.

\(^{358}\) For an old English translation, see Hakeda 1967. Frederic Girard recently has made an excellent French translation. See Girard 2004.

\(^{359}\) In the chapter, Manifestation of the Tathāgata it is asked what a bodhisattva should know about the citta, vijñāna and manas of the Tathāgata, where all these terms refer to the Tathāgata’s mental realm. See Hamar 2003a. For the English translation of relevant passage in the scripture, see Cleary 1993: 998, Chien 1993: 97-98.
As we saw above, it is quite certain that one-mind in the sūtra has nothing to do with the Absolute One-mind, and it is feasible to propose that this passage, in fact, cannot be linked to Yogācāra. Nonetheless, the famous Yogācāra philosopher, Vasubandhu in his commentary to the Daśabhūmika-sūtra seems to suggest that this passage indeed propounds Yogācāra teaching:

'Only made by one-mind’ means that everything in the three realms is evolved by only the mind. Why are there various mundane truths? Following the discernment of mundane truth one can realize the absolute truth.

Vasubandhu explains that all phenomena in the three realms are evolved by mind. As a result of this process we find a great diversity in the phenomenal world, but duly contemplating on these phenomena, one can realize the absolute truth, if one is able to see the source of phenomena.

In his work on substantiating consciousness-only, Viṃśatikā-kārikā [vṛtti] Vasubandhu refers to this passage in the Daśabhūmika-sūtra:

In the Great Vehicle, the three realms of existence are determined as being perception-only. As it is said in the sūtra: “The three realms of existence are citta-only.” Citta, manas, consciousness, and perceptions are synonyms. By the word “citta”, citta along with its associations is intended here. “Only” is said to rule out any (external) object of sense or understanding.

Vasubandhu interprets this passage as a proof for consciousness-only, and furnishes two important comments. First, he underlines the identity of the terms, citta, manas, consciousness, and perceptions. Second, he notes that the term, “citta” here also includes mind associates. It will become important in Fazang’s treatment of the ten levels of consciousness-only, as he makes difference among propositions whether they include mind associates, or not.

Xuanzang, who compiled the Cheng weishi lun 成唯識論, as a commentary on Vasubandhu’s Trimsıkā-kārikā, also refers to this passage:

---

360 Shidi jing lun 十地經論, T26, no. 1522, p. 169, a16-17.
361 This is a translation of the Sanskrit version. See Anacker 1984: 161. The Chinese version is 安立大乘三界唯識。契訶訶三界唯心。心意識名之差別。此中說心意兼心所。唯遮外境不遮相應。 See Weishi ershi lun 唯識二十論, T31, no. 1590, p. 74, b27-29.
According to what the [Daśabhūmika]-sūtra says, “The three realms are mind only.” Also, [the Saṃdhinirmocana-sūtra] says, “Objects are only manifestations of consciousness.” Also, [the Laṅkāvatāra-sūtra] says, “None of the dharmas is apart from mind.” Also, [the Vimalakīrti-nirdeśa-sūtra] says, “Sentient beings become impure or pure through mind.” It is also said, “Bodhisattvas who are provided with four knowledges can, in accordance with awakening, enter [the truth of] consciousness only and objectlessness.”

Here, we find this passage along with other citations from classical Yogācāra works, Saṃdhinirmocana-sūtra, the Laṅkāvatāra-sūtra, and the famous Mahāyāna sūtra, Vimalakīrti-nirdeśa-sūtra to prove that only consciousness exists, and there are no external objects.

It would be interesting to know how the Dilun school interpreted this passage, but, unfortunately, this relevant section has not survived in either Fashang’s or Huiyuan’s commentary to the Daśabhūmika-sūtra. However, Huiyuan alludes to this passage in his Mahāyāna Encyclopedia (Dasheng yizhang 大乘義章) twice. First, he says:

The sūtra says: The twelve chains of dependent arising is created by only one-mind. ’Created by only mind’ means that all forms and objects arise depending on the deluded mind. Just like all objects of dream arise dependent on the dreaming mind.

Here, Huiyuan attributed tainted quality to mind, which rises all objects in the phenomenal world. This understanding is very close to the original meaning of the sūtra. However, discussing the dependent arising, he lists three types of dependent arising: 1. phenomenal dependent arising (shixiang yinyuan 事相因緣), dependent arising based on deluded thinking (wangxiang yinyuan 妄想因緣), and absolute dependent arising (zhenshi yinyuan 真實因緣). Explaining the last one, he says:

364 Dasheng yizhang 大乘義章, T44, no. 1851, p. 550, a16-18.
The absolute is the essence of the previous dependent arising based on deluded thinking. Reaching the limit of the original nature, everything is collected only by the absolute dependent arising. Eventually, there is no delusion outside the absolute that could be attained. This is the principle of absolute dependent arising. As the [Daśa]-bhūmika-sūtra says: ‘all the twelve chains of dependent arising are created by one-mind.’ ‘All is created by mind’ means that created by the absolute mind.

In contrast to the previous citation, Huiyuan explains that one-mind, which creates the phenomena, is the absolute mind. If one understands the real nature of phenomenal dependent arising, one will realize that it relies on the dependent arising of absolute mind. These two quotations from Huiyuan works reflect his ambiguous stance regarding the nature of ālayavijñāna, the final reality: he attributes both impure and pure aspects to it.

Commenting on this passage, the second patriarch of the Huayan tradition, Zhiyan explains that it refers to two kinds of consciousness-only:

This text includes two kinds of consciousness-only. ‘The three realms are mind-only’ is the consciousness-only of root-consciousness. Later in the sūtra the gāthā says: ‘[three realms] exist from the craving mind,’ is the consciousness-only of mental consciousness.366

These two kinds of consciousness-only are the root-consciousness, or ālaya consciousness and the mental consciousness. Elsewhere he clarifies that the absolute consciousness and deluded consciousness are the essences of consciousness-only of ālaya and the consciousness-only of mental consciousness, respectively.

The first is the consciousness-only of ālaya, which takes the absolute mind as its essence; the second is the consciousness-only of mental-consciousness, which takes deluded consciousness as its essence.367

一梨耶唯識。即以真識為體。二者識唯識。即以妄識為體也。
Thus following the footsteps of Huiyuan, he also interprets the one-mind as both pure and tainted. However, he associates the tainted aspect of mind with the mental consciousness which is the first six consciousnesses in the Yogācāra, while the root-consciousness, or ālaya is connected with the absolute mind.

b. The Metaphor of Painter in the Buddhāvatamsaka-sūtra and its Chinese Interpretation

The famous mind-painter metaphor in the Buddhāvatamsaka-sūtra can be found in the chapter entitled Hymns recited in the palace of Yama. At the beginning of the chapter, through the magical powers of Buddha, the bodhisattvas of the ten great directions appear before him accompanied by an infinite number of bodhisattvas; then, receiving inspiration, they start to recite hymns one by one, extolling Buddha. The ninth among the declaimers is the bodhisattva called Forest of Awakening, who, like the others, recites ten stanzas. He compares the mind to a painter: just as the painter creates his picture, the mind creates the external world. It is plausible to identify the influence of Yogācāra philosophy in the poem, as the latter denies the existence of external objects, and only accepts the existence of the mind that projects external objects.

The mind-painter metaphor was extensively studied by Chinese and Japanese Buddhist masters; Chinese commentaries give detailed explanations of the meaning of the poem. In Japan, separate works were written to interpret these ten stanzas. The poem was taken out of the sūtra, and was called the Mind-only Poem (Weixin jie 唯心偈). The seventh and eighth stanzas were considered to be the central part of the text:

The Buddha is also like the mind,
and living beings are like the Buddha.
It must be known that the Buddha and the mind are, in their essence, inexhaustible.

If one understands that the activity of the mind

---

368 Commentaries written on the Mind-only Poem were collected meticulously by Kamata Shigeo. See Kamata 1989.
creates the worlds everywhere,
he will see the Buddha,
and understand the real nature of the Buddha.

The popularity of the poem is reflected in its influence on Buddhist legends. It is sometimes called the *Hell-Breaking Poem*, in reference to the following story:

There was a man of Jingzhao, whose family name was Wang, and his personal name was Minggan. Originally, he did not follow any particular religious practice, and did not cultivate any good deeds. He died in an accident, and two men took him to hell. In front of the gate of hell, he saw a monk who said that he was Bodhisattva Kṣitigarbha. Then he taught him to recite one poem:

If somebody wants to know
all the Buddhas of the three worlds,
he has to discern like this:

mind creates all the Tathāgatas.

The Bodhisattva, having finished the lesson, said: “By reciting this one poem, you can be saved from all the suffering of hell.” That man mastered the recitation of this poem, and went to see the king [of the underworld]. The king asked: “What virtue does this man have?” He replied: “I can recite only a poem with four lines.” He recited it as he was taught, and the king excused him. When he recited this poem, wherever his voice reached, all the suffering people were set free. After three days, he came back to life, and remembered this poem, and told all the monks and lay people. After investigating, he discovered that this poem comes from the chapter called Countless Bodhisattvas Assemble in the Heavenly Palace of Yama of the *Buddhāvataṃsaka-sūtra*. Wang told this to master Dingfa of the Kongguan temple.
The painter metaphor can be found in early Buddhist scriptures.\(^\text{371}\) The Therīgāthā says that the eyebrows of a young woman are as beautiful as if they were painted by a painter, but when she grows old, her eyebrows become ugly. The Samyuktāgama [or Khanda-samyukta?] says that living beings are determined by their anger, desire and ignorance. If the mind becomes tainted by these poisons, living beings will also be tainted, but if they remove them, they will become pure. This process is compared to the way a painter paints forms on the paper.\(^\text{372}\) Here, it is clearly described how the deeds or karma of living beings influence their future: our deeds determine the quality of our existence just as the painter creates the different forms.

In the Saddharma-smṛtyupasthāna-sūtra, also known as the Hīnayāna Buddhāvataṃsaka-sūtra, the painter metaphor occurs a number of times.\(^\text{373}\) In one instance it appears as follows:

> Mind creates every activity.
> As they come from the mind, all consequences come into being.
> This way, because of the different actions of the mind, different consequences are achieved.

> Mind is the skilful painter of all things;
> it can form all kinds of actions in the three dhātu.
> Mind pervades all forms of being,
> they are born at different places without end.

> Mind is the root of being bound or liberated;
that’s why it’s said that mind is the first.
Those who do good will be liberated;
those who do evil will be bound.

心能造作一切業
由心故有一切果
如是種種諸心行
能得種種諸果報
心為一切巧畫師
能於三界起眾行
為心所使遍諸趣
處處受生無窮已
心為繫縛解脫本
是故說心為第一
為善則能得解脫
造惡不善則被縛\(^\text{374}\)

---

\(^\text{372}\) Za āhan jing 雜阿含經, T2, no. 99, p. 69, c19-25.
\(^\text{373}\) Bussho kaisetsu dai jiten vol. 5, 330. For the analysis of this work, see Lin 1949.
The *Saddharma-smṛtyupasthāna-sūtra* says that mind creates karma, different deeds have different consequences, and thus living beings are reborn into various places in the course of their endless rebirths. Those who commit evil deeds are chained to *saṃsāra*, while those who accumulate merit can find the way out of suffering, and attain *nirvāṇa*. Mind is the most important factor, as, in generating karma, it depends on mind whether one can achieve liberation or must suffer. Consequently, mind is responsible for the world, the environment one lives in, and in this sense mind is said to create the world. Here, the creative power of mind is definitely interpreted on the soteriological level, and has much less to do with ontological issues.

ii. Translation and interpretation of the *Mind-only Poem*

In the following sections, we will analyze the Chinese and Tibetan versions of the poems, together with the commentaries of the Chinese masters. Tibetans are usually closer to the Sanskrit original, which enables us to estimate how the text changed in the process of translation into Chinese. Of course, we do not know the texts on which the Chinese and Tibetan translations were based, and there is no extant version of the poem in Sanskrit. Therefore, the exact relations between the versions cannot be determined.

It is also interesting to study what kind of commentaries the Chinese masters wrote on the poem, and in what context they placed them. We will analyze the commentaries of two Huayan masters, Fazang (643-712) and Chengguan (738-839); the former wrote a commentary to the sixty-fascicle Chinese translation of the *Buddhāvataṃsaka-sūtra*, and the latter to the eighty-fascicle version. The two masters explain the text similarly in many respects, but in some important questions they present very different viewpoints. Chengguan’s commentaries are characterized by the citation of a large number of other Buddhist and non-Buddhist texts, so his commentaries become something like an encyclopedia that contains all the knowledge an educated Tang dynasty monk was supposed to acquire.

Both monks base their explanation of the poem on the text entitled *Awakening of Faith in Mahāyāna* (*Dasheng qixin lun* 大乘起信論). This work, highly influential on the

375 For the Japanese translation of the three versions, see Tamaki 1989: 26-28. Yamaguchi Susumu attempted to reconstruct the original Sanskrit terms on the basis of the Tibetan text. See Yamaguchi 1949.
376 For an outstanding French translation, see Girard 2004; for an English translation, see Hakeda 1967.
development of East Asian Buddhism, says that the one-mind (yixin 一心) has two aspects: the absolute aspect (zhenru 真如) and the samsāra aspect (shengmie 生滅).\(^{377}\) The commentators compare the absolute mind to the painter, while external objects, the world of phenomena, are the painting that comes from the absolute mind. Chengguan, unlike Fazang, refers to the Faxiang school quite often, and quotes Xuanzang’s 玄奘 (602-664) translation of the Cheng weishi lun 成唯識論\(^{378}\), a summary of Yogācāra philosophy. Fazang, on the other hand, regarded the dependent arising of the dharma-dhātu as much more important than the mind-only school. This is proven by the fact that he omitted Yogācāra from the New Ten Mysteries. In the era of Chengguan, Chan Buddhism was especially popular, which may be the reason for his much greater appreciation of Faxiang, a school that studied mind in a scholastic way.\(^{379}\)

According to Fazang, “the first six stanzas tell us how mind creates the world of phenomena; the next four tell how mind gives rise to the Saint.” \(^{380}\) In other words, in accordance with the Awakening of Faith in Mahāyāna, the first six stanzas deal with the everyday aspect of the mind, while the last four stanzas explore the absolute aspect.

Chengguan says that this poem delineates how the real and the false become united (zhengwang hecheng 真妄合成), and it is called the “complete consciousness-only” (jufen weishi 具分唯識) because this poem not only elucidates how tainted phenomena originate, but also reveals the attainment of Buddha-mind. Thus it includes both aspects of absolute mind.\(^{381}\)

Chengguan arranges the poem differently than Fazang. According to him, the first five stanzas show the teaching from the viewpoint of the metaphor, while the next five stanzas explain the formation of the right approach based on the teaching. The first two stanzas of the first part clarify the matter from the point of view of phenomena, and the next three from the point of view of mind (大分為二。前五約喻顯法。後五法 合成觀。前中二。前二約事 後三約心。)\(^{382}\)

In the following, we first provide two Chinese and one Tibetan versions of the poem, then an English translation of the version made by Śikṣānanda. After this, we will compare these versions, and analyze the Chinese interpretations.

1. a. 譬如工畫師 分布諸彩色
   虛妄取異色 四大無差別

b. 譬如工畫師 分布諸彩色
   虛妄取異相 大種無差別

c. ji-ltar ri-mo’i las-rnams-la /
   mtshon-rnams sna-tshogs kun ’du-ba /
   kun kyang ’byung-ba chen-por mnyam /
   sems-kyis yongs-su brtags-pa yin /

Like when a painter
is spreading the paint:
the different forms are apprehended in a wrong way;
the components are not distinct.

The painter blends different colors, and people perceive them as different. In reality, however, the four elements (Earth, Water, Fire, Wind) that constitute the material world (*mahābhūta* 四大/大種, *byung-ba chen-po*), together with the colors, are “differentiated only by the mind”, as the Tibetan text says. Fazang explains this poem on the basis of the *Awakening of Faith in Mahāyāna* in this way: the four elements symbolize the absolute mind, while colors symbolize the empty forms that arise dependently. (四大喻真心也。彩色喻緣起虛相也。)

---

383 In the following, ‘a’ refers to Buddhhabhadra’s translation (see *Da fangguang fo huayan jing* 大方廣佛華嚴經, T 278: 9.465c16-466a6); ‘b’ refers to Śikṣānanda’s version (see *Da fangguang fo huayan jing* 大方廣佛華嚴經, T 279: 10.102a11-b1); ‘c’ denotes the Tibetan variant (see Tibetan Tripitaka Peking Edition, ed. by D. T. Suzuki, Kanjur, Phal-chen I. XXV. 135.3.7.-4.6.). The following English translation is based on ‘b’.

384 The French translation was provided by Frédéric Girard, for which I am very grateful.

385 For Fazang’s commentaries on the poem see *Huayan jing tanxuan ji* 華嚴經探玄記, T33, no. 1733, p. 215, b4-c29; for Chengguan’s one see *Da fangguang fo huayan jing shu* 大方廣佛華嚴經疏, T35, no. 1735, p. 658, a7-p. 659, a19; *Da fangguang fo huayan jing suishu yanyi chao* 大方廣佛華嚴經隨疏演義鈔, T36, no. 1736, p. 321, c9-p. 324, b18.

386 See *Huayan jing tanxuan ji* 華嚴經探玄記, T33, no. 1733, p. 215, b22-23.
Chengguan interprets the first stanza in accordance with the Three Natures teaching of Yogācāra. In the first line the painter is a summing up of everything (zong 总), symbolizing the one-mind that encompasses the absolute and the phenomena, the subject and object, all dharmas. The spreading of the paint in the second line symbolizes the process in which things come into being as a consequence of ignorance, according to the law of pratītya-samutpāda or dependent arising (suiyuan xunbian 随緣熏變). This is dependent nature. The third line reveals that living beings do not understand the process of dependent arising, so they differentiate between things wrongly. This is imagined nature. The last line tells us that if phenomena arising dependently are exhausted (yita xiang jin 依他相盡), that is perfect nature.

2.
   a. 四大非彩色 彩色非四大
      不離四大體 而別有彩色
   b. 大種中無色 色中無大種
      亦不離大種 而有色可得
   c. khams-la tshon-rtsi de-dag med /
      tshon-rtsi-la yang khams med-de /
      khams-rnams ma gtogs gzhan-na yang /
      tshon ces bya-ba gang yang med /

   In the composing element, there is no form.
   In the form, there is no composing element.
   Outside the composing element
   form cannot be apprehended.

The second stanza first ascertains that colors are not identical with the four elements, and conversely, that the four elements are not the same as colors. Then it goes on to say that colors cannot exist without the elements, as they are comprised of them.

Chengguan first explains their differences in a very practical way: the four attributes of the four elements (hardness, wetness, warmness, movement) belongs to the territory of touch, while colors are the objects of vision. The four elements are unchanging, but if one of the four

387 See Da fangguang fo huayan jing suishu yanyi chao 大方廣佛華嚴經隨疏演義鈔, T35, no. 1735, p. 658, a19-22; Da fangguang fo huayan jing suishu 大方廣佛華嚴經疏, T36, no. 1736, p. 322, a4-19.
becomes dominant, then different colors arise. The dominance of Earth creates yellow; that of 
water, white; fire makes red, and wind produces blue. Following this, Chengguan returns to 
the dichotomy of real and false (zhen wang 真妄), saying that false comes into being relying 
on the real. In other words, the world of phenomena is produced by the absolute mind, so 
subject and object are different. Similarly to the invariability of the four elements, buddha-
nature is also unchanging, but the world of phenomena is diverse, just as colors are different. 
The last two lines point out that phenomena cannot be separated completely from the source 
of their existence, the absolute mind, as they do not have another, separate essence (wu bieti 
無別體). Nature and phenomena blend into each other (xingxiang jiaoché 性相交徹). 
According to Chengguan, a question arises: is it possible to reverse the relationship between 
real and false; can real come into existence from false? His answer is a definite ‘no’. 
Commenting on this part Fazang points out that, despite the close relationship between 
phenomena and absolute, they are different, because their natures are different: phenomena 
are empty, while the absolute is real. At the same time, however, they are not separated, 
because the absolute can be manifested through emptiness:

The first half of the [second] stanza clarifies that the real and false are not identical. The first 
sentence shows that in the metaphor the creator is not the created. The real that includes the false is 
not identical with the false, because its nature is real. The next sentence illustrates that the created 
is not the creator. The false that relies on the real is not identical with the real, because its nature is 
empty. The second half elucidates that the false is not apart from the real. It means that emptiness 
penetrates the real, because the real is manifested if emptiness is eliminated. Thus we say they are 
not separated. They are neither separated, nor different, nor identical. Think about it!

後偈上半明真妄不即。上句明能造非所造喻。攝妄之真不即妄。以性真故。下句明所造非 
能造喻。依真之妄不即真。以性虛故。下半明妄不離真。謂以虛徹真虛盡真現故云不離。 
是故不離不異不即思之。388

3. 
a. 心非彩畫色 彩畫色非心
   離心無畫色 離畫色無心

b. 心中無彩畫 彩畫中無心
   然不離於心 有彩畫可得

In the mind, there is no colorful painting.
In the colorful painting, there is no mind.
Outside the mind, therefore,
the colorful picture cannot be apprehended.

While the first two stanzas are about the painter and the colors, mind appears here in the place of the painter. Similarly to the previous stanza, the difference and identity of the mind and the painter are discussed: in the first two lines, their difference, in the next two lines, their identity. It is interesting to note that in Buddhabhadra’s translation not only can painted colors not exist without the mind, but the mind cannot exist without painted colors either. This latter statement does not appear in the later Chinese and Tibetan versions. Chengguan, who comments on the text of Śīkṣānanda, emphasizes that similarly to what was said in the previous stanza, objects cannot exist without the mind, but the reverse is not true. This is why we talk of consciousness-only (weishi 唯識), not object-only (weijing 唯境). To put it in Yogācāra terms, mind is the percipient (jianfen 見分), while objects are the perceived phenomena (xiangfen 相分). Fazang says that mind is the root, and forms are the branches (xin ben xing mo 心本形末). They cannot be separated from each other. He emphasizes that these two are not identical and not different, and that objects are created by the mind.

4.

a. 彼心不常住　無量難思議
顯現一切色　各各不相知

b. 彼心恒不住　無量難思議
示現一切色　各各不相知

c. sems de rtag-pa ma yin-pa /
bsam-gyis mi khyab tshad med-cing /
phan-tshun shes-pa med-pa-vi /
gzugs-rnams thams-cad ston-par byed /
Mind does not remain forever
numberless and incomprehensible.
It manifests all forms
that do not know each other.

Fazang says that the non-constant mind is the root, and it brings phenomena into existence. The latter do not have their own essence, so they cannot be known. Chengguan presents a much more substantial exegetical explanation. First he quotes the *Awakening of Faith in Mahāyāna*, saying “the not-born and not-ceasing is connected to the born and the ceasing called ālayavijnāna.” Then he goes on to explain the fourth and fifth stanzas by quoting extensively from passages of the *Cheng weishi lun*. He writes that the ālayavijñāna is neither eternal nor ceasing: it evolves without interruption; it perishes and is born from moment to moment, entering new states all the time.\(^{389}\)

To clarify the last line, he cites the tenth chapter of the *Buddhāvatāṃsaka-sūtra* entitled *Bodhisattva requests explanation*:

The dharmas do not have functioning,
do not have essential nature.
So they mutually
do not know each other.

諸法無作用
亦無有體性
是故彼一切
各各不相知\(^{390}\)

Thus, similarly to Fazang’s view, Chengguan holds that phenomena do not know each other because they do not possess separate essential nature.

5.
   a. 猶如工畫師  不能知畫心
       當知一切法  其性亦如是

\(^{389}\) *Cheng weishi lun* 成唯識論, T31, no. 1585, p. 12, b28-c7. For English translation, see Cook 1999: 75.

\(^{390}\) *Da fangguang fo huayan jing* 大方廣佛華嚴經, T10, no. 279, p. 66, b6-7. For an English translation, see Cleary 1993: 298.
b. 譬如工畫師  不能知自心
        而由心故畫  諸法性如是

c. ji-ltar ri-mo-nkhan-gyi mams /
sems ni gang-gis ri-mo de /
bris-pa’i sms ni mi shes pa /
debzhin chos-kyi rang-bzhin-no /

        Just as in the case of the painter
        who does not know his own mind,
        but the painting comes from his mind
        – the nature of everything is like this.

Fazang does not give a detailed explanation of the fifth and sixth stanzas. Chengguan already referred to the description of ālaya consciousness in the Cheng weisihi lun; here he carries on with this, saying that given its never-ceasing change, the ālayavijñāna cannot be known. The previous moment has passed, but the next moment is not yet born, thus there is no essence that could know the previous moment. If mind is not able to know itself, how could it know objects?

Therefore, the fifth stanza has four meanings. First of all, it clarifies emptiness, because it reveals that the ever-changing mind does not have essence. Second, even if mind is empty, it does not obstruct the origination of objects (bu ai yuanqi 不礙緣起). Third, given the delusion about reality, the pseudo-world comes into being (mi zhen qi si 迷真起似). If one could understand the real nature of mind, false objects (wang jing 妄境) would not be originated. Fourth, objects come into being due to emptiness, as said in the Treatise on the Mean.391

That is why the last line says “the nature of everything is like this”—not only is mind empty, but dharmas are empty as well.

6.

a. 心如工畫師  畫種種五陰
        一切世界中  無法而不造

391 以有空義故, 一切法得成, 若無空義者, 一切則不成. See Zhonglun 中論, T30, no. 1564, p. 33, a22-23.
Mind, just like the painter,
can paint the different worlds.
The five skandha are born from it;
there is nothing it does not create.

At this point, Chengguan refers to the *Saddharma-smṛtyupasthāna-sūtra*, describing how the mind paints the different worlds: the mind-painter uses five colors (black, blue, red, yellow, and white) to paint the six forms of existence (man, god, demigod, animal, hungry ghost, hell-dweller). The *sūtra* characterizes the karma of living beings in the different forms of existence with more than one color. For example, the karma of animals is black because of their fear, and, in the same time, it is red because they destroy each other. According to the last line of the stanza, the *skandha, dhātu* and *āyatana*, that is to say, all dharmas come from the mind. Chengguan adds that the ten *dharma-dhātu* that include not only the above-mentioned six forms of existence, but also the four saints (*śrāvaka*, *pratyekabuddha*, *bodhisattva*, buddha), all come into existence from the mind.

---

392 See *Zhengfa nianchu jing* 正法念處經, T17, no. 721, p. 286, c28-p. 287, b9. It is interesting to note that blue (*qīng* 青) was not mentioned on the original sūtra.
The Buddha is also like the mind,
and living beings are like the Buddha.
It must be known that the Buddha and the mind
are, in their essence, inexhaustible.

The seventh stanza goes beyond the mind-painter metaphor that characterizes the
Yogācāra school; by establishing the identity of the buddhas and the living beings it moves
into the direction of the Tathāgatagarbha teachings, according to which living beings possess
buddha-nature, so they will sooner or later become buddhas. It is the translation of
Buddhabhadra that states this most clearly: “The mind, the buddhas and the living beings—
there is no difference between these three.” Śīkṣānanda’s version, which is identical to the
Tibetan variant, says “It must be known that the Buddha and the mind are, in their essence,
inexhaustible.” ‘Living beings’ are omitted from both the Tibetan and the later Chinese
translations, so it is Chengguan’s task to reconcile the two Chinese versions. Fazang,
commenting on Buddhabhadra’s translation, explains the identity of the three in the following
way:

This stanza interfuses the root and the branch. Three statements can be made on root and branch.
The first [statement] proposes only the root that is the real principle (zhèn lǐ 真理). Its nature is
pure and originally enlightened, thus it is called Buddha. The second [statement] includes only the
branch that refers to living beings evolved [from mind]. The third [statement] includes both [root
and branch] refers to mind that is able to evolve. It can evolve because it relies on the absolute.
These three are dependently originated, interfused, and unobstructed. One completely includes the
others. As their nature is not different, it says that they do not differ.

Fazang expounds the identity of the mind, the buddhas and the living beings inside the
framework set up by the Qīxin lūn. Root is the nirvāṇa aspect of the one-mind that holds the
absolute truth; thus, from among the three, it corresponds to the Buddha. Branch is the
sāṃsāra aspect of the one-mind that is equivalent to living beings experiencing the suffering.

---

393 *Huayan jing tanxuan ji* 華嚴經探玄記, T35, no. 1733, p. 215, c18-23.
of saṃsāra. And finally, mind includes both living beings and buddhas, as both come into existence from mind. Following this, Fazang uses typical Huayan rhetoric to assert the dependent arising, interfusion and unobstructedness of the three.

Chengguan, following in the footsteps of Fazang, writes that if someone understands that everything originates from mind, then pure dependent arising (jing yuanqi 淨緣起) happens, so the person becomes a buddha. He who does not understand this will become a living being through tainted dependent arising (ran yuanqi 染緣起). However, even if we can talk about pure and tainted dependent arising, in the case of buddhas and living beings mind is not distinct in its essence, as the consequence of buddhahood is contained in the mind. Therefore, similarly to the absolute, it is inexhaustible. Buddha also originates from mind, as the four wisdoms and the bodhi are created by the pure eighth consciousness, that is, the purified ālayavijñāna. Chengguan here points to the different views of Paramārtha (499-569) and Xuanzang on this question.394 Paramārtha describes this pure mind as the ninth consciousness above the ālayavijñāna, which he calls amalavijñānana. Xuanzang, on the other hand, states that during the process of becoming buddha, the eighth consciousness transforms into untainted consciousness (wugou shi 無垢識), so there is no separate ninth consciousness.395

In the case of the Buddha, it is easy to recognize his inexhaustibleness and infiniteness. In the case of living beings, however, this is a more difficult task, as they live in a tainted world, saṃsāra, so their minds are also tainted. Chengguan says that this is the reason why the Tang dynasty translation only mentions the inexhaustibleness of the mind and the buddhas. Tainted mind, however, in its essence, is just as pure as the mind of the Buddha, so we can say that the mind of living beings is also infinite. Thus, in this respect, the mind, the buddhas and living beings are identical. Chengguan here refers to the famous tenet of the Tiantai school, according to which Tathāgata also has evil nature (xing’e 性惡). According to the Tiantai interpretation, Buddha possesses evil nature, but he has ceased to perform evil deeds, so he can never become evil. He has understood the characteristics of evil nature, so in

---

394 Paramārtha was the first Indian master to introduce Yogācāra teachings to China, translating a number of important works into Chinese. The Shelun school of China was based on Paramārtha’s teachings, the most important of which was that there exists a pure consciousness in every living being, called amalavijñānā. Xuanzang, who mastered the Sanskrit language in India, and made new translations of many Yogācāra texts already rendered by Paramārtha, did not accept this new concept, and questioned the tenets of the earlier Chinese Yogācāra school. Zhiyan 智嚴 (602-668), the second patriarch of the Huayan school came to the defense of the old school, in order to preserve the teaching of tracing back the human existence to pure sources. Robert M. Gimello provides an excellent outline of this era in his doctoral dissertation (see Gimello 1976). On Paramārtha’s life and philosophy, see Paul 1984. By the time of Chengguan, this controversy seems to ease, as Chengguan attempts to reconcile these two opinions.

the course of proselytizing living beings he can use evil methods consciously; he can also descend to hell in order to save living beings. At the same time, there are the icchantika who lack the root of goodness; they, according to some earlier masters, can never become buddhas.\textsuperscript{396} The Tiantai master Zhiyi 智顗 (538-597) said, however, that icchantika had not cut the root of goodness, they just do not practice good; but under benevolent influence they can still do good things.\textsuperscript{397} Chengguan, as in other cases, explains this teaching in the spirit of Qixin lun. Evil and good dharma both originate from absolute nature, as samsāra and nirvāṇa are two aspects of the one-mind. The good nature of a living being cannot cease to exist, as the absolute cannot cease to exist. Chengguan, finally, lays down a theoretical basis for proving that the two translations are not contradictory, but complementary. In order to substantiate the identity of buddhas, living beings and mind, Chengguan divides each into pure and impure aspects. Their impure aspects have to do with their appearances in the world of phenomena, or samsāra, while their pure aspects are realized through leaving this world, and finally arriving at nirvāṇa. Given that each has pure and impure aspects, they are identical and interpenetrated:

The three above each have two aspects. These are two aspects of the comprehensive mind: first, being tainted and, second, being pure. These are the two aspects of a Buddha: first, in response to the faculty [of living beings] he follows the tainted, and second, in his equanimity he avoids the tainted. These are two aspects of living beings: first, they wander in samsāra turning away from Buddha, and second, the faculties of living beings ripen and generate belief in Buddha. In accordance with their first aspect, they do not differ in that they wander in the samsāra. In accordance with the second aspect, they do not differ in that they return from samsāra. Thus if we say that they are not different, it includes both their limit and limitlessness.

上三各有二義。總心二義者。一染二淨。佛二義者。一應機隨染。二平等違染。眾生二者。一隨流背佛。二機熟感佛。各以初義成順流無差。各以後義為反流無差。則無差之言含盡無盡。\textsuperscript{398}

8.

a. 諸佛悉了知 一切從心轉

\textsuperscript{396} According to the Mahāparinirvāṇa-sūtra, translated by Faxian 法顯 (cca. 337-cca. 422) in 418, icchantikas cannot become buddhas. In spite of this, Daosheng 道生 (360?-434) stated that every living being can attain buddhahood, and he was excommunicated for his views. Dharmakṣema’s translation, however, said that icchantikas could become buddhas. Following this, Daosheng became highly respected. See Kim 1990: 35.

\textsuperscript{398} Da fangguang fo huyan jing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 658, c14-19.
Appendix: Additional Translation Options

The eighth stanza is rather problematic, so we present a translation of the other two versions as well:

a. All buddhas know that everything develops from the mind. If someone understands this, he will see the real Buddha.

c. What the courses of the mind are like—buddhas know it very well. So buddhas, because of their nature, perceive how living beings come into existence.

The most obvious difference is that in the first two lines the two Chinese translations state that everything, that is to say, all worlds, originate from the mind. Buddha knows this truth, and other beings need to recognize it. This might be a result of the influence of Yogācāra on the Chinese translators. The Tibetan version, however, speaks differently. It says that buddhas know the courses of the mind very well (sems-kyi rgyud, citta-saṃtati). As a result, the poem goes on, buddhas know what kinds of rebirth await living beings. This ability of Buddha was taught by early Buddhism as well; this is the third of the six superior
knowledges (abhiñā), called ceto-pariyañña. The last two lines of the Chinese translations, on the other hand, say that those who understand that everything originates from the mind will see the real nature of Buddha.

This stanza shows us what the original meaning of the Mind-only poem could have been. In fact, the mind-painter metaphor can be interpreted here in the same way as in earlier works: our deeds have consequences, they will determine the circumstances of our existence in our next lives, so they paint the world in which we will have to live. Buddha, with his special ability, can see what kind of future awaits us, what kind of picture our mind is painting. Buddha sees it, and, as emphasized frequently in the Buddhāvatamsaka-sūtra, he helps living beings with different upāya, or expedient means.

Chengguan comments this stanza briefly: he notes that living beings apprehend the different forms wrongly, so they do not get to know the activity of the mind. If they realized that the activity of the mind created the worlds, then their delusion would end, and they would understand reality (zhenshi 真實).

9.

The mind does not dwell in the body, and the body does not dwell in the mind. However, it can still perform Buddha’s deeds freely and in an unequalled way.

Chengguan, in his commentary to the ninth stanza, shows that these parts are parallel to earlier lines. “The mind does not dwell in the body, and the body does not dwell in the mind” corresponds to the first two lines of the second and third stanzas: “In the composing element

399 See Guang 2005: 16.
there is no form, in the form there is no composing element”, and “In the mind, there is no colorful painting, in the colorful painting, there is no mind”. All these emphasize that two things are not identical. Mind is that from which things are formed (nengbian 能變), and body is that which is formed from mind (suobian 所變), so they cannot be the same. The following two lines (“However, it can still perform Buddha’s deeds, freely and in an unequalled way”) refer back to the second two lines of the second and third stanzas ("Outside the composing element, form cannot be apprehended”; “Outside the mind, therefore, the colorful picture cannot be apprehended”). These lines stress the identity of two things. Though mind is not contained in form, and form is not contained in mind, functioning comes into existence by virtue of essence (yi ti qi yong 依體起用). The absolute, therefore, can appear in the world of phenomena without losing its absolute character. Buddha appears in the world for the sake of living beings, he teaches them in order to save them from suffering, but meanwhile, his deeds do not become separated from the absolute, so they manifest themselves freely, they are unequalled, or, as the Tibetan version says, ‘marvelous’ (ngo-mtshar che).

    chos-kyi dbyings-su blta-bar-gyis /

If somebody wants to know
all the buddhas of the three worlds,
he has to discern the nature of dharma-dhātu:
everything is created by the mind.

The first two lines are identical in the other two versions, but the following two are different:
a. He has to discern like this:
   mind creates all the Tathāgatas.

c. All buddhas need to be viewed as the mind itself
   and as dharma-dhātu.

The two Chinese versions clearly reflect the Yogācāra tenet, according to which only
the mind exists, as “mind creates all the Tathāgata”, and “everything is created by the mind”.
The Tibetan version is less convincing in this respect. It seems more probable that the text
emphasizes the identity of the buddhas, the mind and living beings, similarly to the seventh
stanza. If the mind runs out of bad karma, this will lead to the state of buddhahood, so if one
wants to know the buddhas and the state of buddhahood, he has to strive to achieve a pure
mind. On the other hand, Buddha has to be sought for in the whole dharma-dhātu; this may
imply that there is buddhahood in every living being. This interpretation would mean that this
stanza goes beyond Yogācāra, and anticipates Tathāgatarbha teachings. This is similar to what
is said in the chapter entitled Appearance of Tathāgata, according to which the wisdom of
Buddha is present in every living being.

According to Fazang, one has to discern things relying on principle (yi li guan 依理觀),
which means that we have to reach reality by meeting the mind (hui xin ru shi 會心入實).
Chengguan says that this stanza refers adversely (fanhe 反合) to the metaphor according to
which the painter does not know his own mind. If he does not know his own mind, then he
will paint unreal objects; but if he realizes that everything is created by the mind, then he will
get to see the real Buddha. Following this, he explains this stanza in two ways.

On the one hand, he says that if someone wants to know Buddha, he has to discern the
nature of dharma-dhātu, which leads to the realization of everything being created by the
mind. If he can see the dharmas in an appropriate way, thus he must see Buddha. On the other
hand, Chengguan applies the paradigm of Awakening of Faith, saying that the discernment of
dharma-dhātus is the absolute aspect, while the discernment that everything is created by the
mind is the saṁsāra aspect. He proposes that the two kinds of discernment in Mahāyāna are
discernment regarding the truth of the absolute (zhenru shi guan 真如實觀) and discernment
regarding the truth of mind-only (weixin shi guan 唯心實觀). One-mind includes these two
kinds of discernment, and all the dharmas. He emphasizes that the two truths are
interpenetrated, unobstructed and one-flavored. The Buddha realized this teaching, thus those
who want to know him must realize this, too. This is most amazing (miaoji 妙極) thing, so
whoever can realize it is able to escape from hell. Here Chengguan cites the story, already quoted, in which a man escaped from hell with the help of the poem.

iii. Conclusion

In the preceding analysis we demonstrated that the mind-painter metaphor had already appeared in early texts and other Mahāyāna works, but the Buddhāvatsamsaka-sūtra is the first work in which it reflects a Yogācāra teaching, or, at least, Chinese commentators interpret it this way. Comparison between the Tibetan and the Chinese versions shows us that the Tibetan translation is rather different from the Chinese ones at many points: it lacks those parts that strengthen Yogācāra interpretation. The difference is most obvious in the eighth stanza. Here the two Chinese texts clearly state that the world is created by the mind, while the Tibetan version says that the buddhas know the course of the mind of living beings. We do not have a Sanskrit version, so it is impossible to establish the authenticity of one or the other translation. Because of the complicated genesis of Mahāyāna texts, even if we had a Sanskrit original that confirmed the Tibetan interpretation, we could not exclude the possibility of the Chinese versions being the exact translations of other, “original” versions, written probably in Sanskrit. It is true, however, that Śikṣānanda relies extensively on Buddhabhadra’s earlier translation; sometimes he copies the previous text word by word, or modifies some lines only for stylistic reasons. Buddhabhadra was heavily influenced by Yogācāra and tathāgatagarbha teachings, so it is possible that it was under his hands that the text was transformed, and took on a form that was easily interpreted as having a Yogācāra meaning.

From among the Chinese commentaries, we studied the interpretation of Fazang and Chengguan. We concluded that both masters found the doctrines of the Qixin lun in the poem: one-mind has two aspects, the nirvāṇa aspect that can be attained by the buddhas, and the saṃsāra aspect that is experienced by living beings. Thus, the painter in the poem refers to the one-mind that was the origin of the worlds of the buddhas and living beings.

As we have seen, Chengguan wrote much more substantial commentaries on the poem. While Fazang seems to have been satisfied with attaching a few Huayan terms to the text, Chengguan did real exegetical work. The latter compared the two Chinese versions, provided detailed explanations of the phrases, cited Buddhist literature extensively to clarify the texts, and revealed the relationship between the different parts of the poem. Of course, he did not forget about Huayan terminology as well.
Finally, we would like to interpret the mind-painter metaphor on the basis of the text and contents of the *Buddhāvataṃsaka-sūtra*, setting aside later interpretations. At the beginning of the work, Buddha sits under the bodhi tree after his enlightenment, then without leaving that place, visits different locations miraculously, accompanied by countless bodhisattvas, to start to spread his teaching. One of the places visited is the palace of Yama where ten bodhisattvas extol the limitless merits of Buddha. Like the other nine poems, the ninth one, studied in this chapter, is also a laudation of Buddha. Therefore, the mind-painter metaphor has to refer to Buddha’s mind, which is able to manifest itself differently in the world, and teach the audience, comprised of living beings on different intellectual levels, with different methods. It appears in the world, but is different from the phenomena of the ordinary world. Thus this poem, like the whole sūtra, reveals a concept of Buddha that had gone through great changes in Mahāyāna. Buddha is no longer a human being, but has transcendent attributes, and he appears in the world with the help of these transcendent attributes. This idea is expressed clearly in the tenth poem of the chapter:

Like the pearl that makes wishes come true,
displays all the colors;
it is colorless, but displays the colors
—Buddha is like this.

Like the pure space,
it has no form, and is invisible;
though it shows all forms,
space cannot be seen by anyone.

Buddhas are just like this:
they show countless forms.
They are not at places mind can travel to;
no one can see them.

譬如隨意珠 能現一切色
無色而現色 諸佛亦如是
又如淨虛空 非色不可見
雖現一切色 無能見空者
諸佛亦如是 普現無量色
c. The metaphor of great sūtra

The chapter *Manifestation of Tathāgata* is very remarkable in terms of Buddhology, as it clearly states that the reason why Buddha appeared in the world was to benefit sentient beings, and in order to accomplish his aim he had recourse to all kinds of skilful methods (*upāya*). The *sūtra* shows ten aspects of the Tathāgata: 1. the characteristics of the manifestation of Tathāgata, 2. the body of Tathāgata; 3. the voice of Tathāgata, 4. the mind of Tathāgata, 5. the realm of Tathāgata, 6. the deeds of Tathāgata, 7. the perfect enlightenment of Tathāgata, 8. the turning of the Dharma wheel by Tathāgata, 9. the *parinirvāṇa* of Tathāgata, 10. the merits originating from seeing, hearing and being associated with Tathāgata. Takasaki Jikidō emphasized that this *sūtra* is a precursor to the tathāgatagarbha theory, the concept that all living being are endowed with the capacity of Buddhahood. Even if the *sūtra* does not use the word *tathāgatagarbha*, it stresses that all living beings have the wisdom of the Buddha, but due to their defilements they are not able to see it. The Buddha's mission is to reveal this fact to living beings.

Further, children of the Buddha, there is no place where the wisdom of the Tathāgata does not reach. Wherefore? There is not a single sentient being that is not fully possessed of the wisdom of Tathāgata. It is only due to their false thinking, fallacies, and attachments that beings fail to realize this. If they could only abandon their false thoughts, then the all-encompassing wisdom, the spontaneous wisdom, and the unobstructed wisdom will clearly manifest themselves.

400 Da fangguang fo huyan jing 大方廣佛華嚴經, T10, no. 279, p. 102, b12-18.
401 Takasaki 1958.
402 Chien 1993: 105.
After this passage we can read the famous metaphor about the *sūtra* which is as large as the whole universe and comprises all phenomena, but this large *sūtra* can be comprised by a small particle of dust.

Children of the Buddha, just as if there was a great *sūtra*, as extensive as the great universe, in which are written down all phenomena in the great universe. That is to say, in it is written about the phenomena in the great enclosing iron mountains, as extensively as the great enclosing iron mountains; it is written about the phenomena on earth, as extensively as the earth; it is written about the phenomena in the small universe, as extensively as the small universe. In the same vein, all phenomena – be they of the four continents, or the great oceans, Sumeru mountains, the palaces of the gods on earth, the palaces of the gods in the heavens of the realm of desire, the palaces in the realm of form, and the palaces of the formless realm – are written down to an equal length. Even though this *sūtra* is as extensive as the great universe, it can be fully comprised within a single particle of dust. As it is with one particle of dust, so it is with all particles of dust.406

403 *Fo shuo rulai xingxian jing* 佛說如來興顯經, T10, no. 291, p. 607, c1-4.
404 *Da fangguang fo huayan jing* 大方廣佛華嚴經, T09, no. 278, p. 623, c23-27.
405 *Da fangguang fo huayan jing* 大方廣佛華嚴經, T10, no. 279, p. 272, c4-7.
406 Chien 1993: 106.
The next passage describes that a person, who must be a Buddha or a bodhisattva breaks the dust and takes out the sūtra in order to benefit all living beings.

Then a person with perfect wisdom, who has perfected the pure heavenly eye, seeing that great sūtra inside a particle of dust, without being of even the slightest benefit to all sentient beings, thinks, "I should exert myself to break that particle of dust and take out the sūtra so that it would be of benefit to sentient beings." Having thought thus, he contrives an expedient method to break the particle of dust and take out the great sūtra, thus enabling all sentient beings to obtain benefits. As he does with one particle of dust, it should be known that he does so with all particles of dust.

410 See Chien 1993: 106.
Next, the text confirms that living beings have the bondless and unobstructed wisdom of the Tathāgata, but they are unable to realise it.

Children of the Buddha, the wisdom of the tathāgata is also thus – boundless and unobstructed, universally able to benefit all sentient beings, it is fully present within the bodies of sentient beings. But those who are ignorant, prone to false thinking and attachments, do not know this, are not aware of it, and thus do not obtain benefit.

k ye rgyal ba'i sras de bzihin de bzihin gshegs pa'i ye shes / tshad med pa'i ye shes chags pa med pa'i ye shes / sems can thams cad nye bar 'tsho ba'i ye shes kyang sems can thams cad kyi sems la rim gis chud par gnas te / sems can gyi sems de dag thams cad de bzihin gshegs pa'i ye shes kyi tshad dang mnyam yang de bzihin gshegs pa'i ye shes de ni byis pa 'du shes su 'dzin pas / rnam par glags pa rams mi shes shing khong du mi chud la mgon tu mi byed nyams su myong bar mi

414 Chien 1993: 106.
Finally, Buddha sees that living beings are unable to realise their own wisdom thus he decides to help them to get rid of their attachment and realise their innate wisdom.

Then the Tathāgata with his unobstructed pure eye of wisdom, universally beholds all sentient beings in the dharma-dhātu, and says: 'Strange! How strange! How can it be that although all sentient beings are fully possessed of the wisdom of the Tathāgata, because of their ignorance and confusion, they neither know nor see that? I should teach them the Noble Path, thus enabling them to forever leave false thoughts and attachments, and perceive the great wisdom of the Tathāgata within themselves, not different from the Buddhas.' Having taught them how to cultivate the Noble Path so that they can forsake false thinking, after they forsake false thinking, they will realize the limitless wisdom of the Tathāgata, thereby benefiting and comforting all sentient beings.\textsuperscript{418}

3. Faxiangzong versus Faxingzong

a. The Origin and Meaning of Faxiangzong and Faxingzong

i. Introduction

Dan Lusthaus finds the origin of the paradigm *xing* 性 versus *xiang* 相 in the *Cheng weishi lun* 成唯識論 and concludes:

“Ironically, this very distinction became one of the major rhetorical weapons used by Fa-tsang against Hsüan-tsang’s school, calling them ‘[the mere] fa-hsiang’ (Dharma-Characteristics) school against his own Sinitic ‘fa-hsing’ (Dharma-Nature) school. This distinction became so important that every Buddhist school originating in East Asia, including all forms of Sinitic Mahāyāna, viz. T’ien-t’ai, Hua-yen, Ch’an, and Pure Land, came to be considered Dharma-nature schools.”\(^{422}\)

Whalen Lai also attributes the establishment of this paradigm to Fazang, referring to Zhili 知禮: “The name ‘Fa-hsiang’ was, however, attributed to it by its critics; it is a derogative term alleging that the school did not know thoroughly the deeper Fa-hsing (Dharma-essence). The contrast was intended to bring out the ‘Hinayānist phenomenalism’ [sic] inherent in the Wei-shih school and to highlight the ‘Mahāyāna essentialism’ of its critic. As recalled by Sung T’ien-t’ai master Ssu-ming Chih-li (959-1028), the distinction arose at the time of Fa-tsang’s (643-712) attack on the Wei-shih school:

“At the time [of Hua-yen (Avalōkiteśvara) patriarch, Fa-tsang,] there was widely held the theory of *chen-ju sui-yüan* (Suchness or *tathatā* accompanying the conditions [the *pratyaya* that brought *samsāra* into being]) and the theory of a (passive) Suchness that would not create (‘let rise’) the various existents (*dharmas*). From that is derived the distinction between a *hsing-tsung* ([Dharma] essence school) and a *hsiang-tsung* ([Dharma] characteristic school). This distinction was made by Fa-tsang and was unknown to our [T’ien-t’ai] master Chih-i.”\(^{423}\)

\(^{422}\) Lusthaus 2002: 372.
\(^{423}\) Lai 1986: 1.
They are right in that Fazang 法藏 introduced the term faxiangzong 法相宗 for the Yogācāra teachings of Xuanzang 玄奘 (600-664), and later this designation became widespread in East Asian Buddhism. In Japan, the Hossō 法相 school represented the most outstanding of the six schools (Sanron 三論, Hossō, Jōjitsu 成實, Kusha 俱舍, Ristu 律, Kegon 華嚴) of the Nara period (710-784). However, attributing the invention of the term faxingzong 法性宗 to Fazang is rather dubious, as it cannot be found in his works. The faxing 法性 is the Chinese equivalent of the Sanskrit dharmatā, which means ‘essence’ or ‘inherent nature.’ I will not delve into this frequently used term in Indian and Chinese Buddhism here as this would go beyond the scope of this thesis. Nonetheless, it should be pointed out that the founder of the Tiantai 天台 school, Zhiyi 智顗 (538-597), identified dharma-nature with Buddha-nature by saying: “Buddha-nature is dharma-nature 佛性即是法性.” He thus attributes Buddha-nature not only to the sentient beings but also to the non-sentient beings. Lusthaus’ other claim that Huayan “came to be considered Dharma-nature school” can also be called into question. In order to provide an answer as to whether Huayan belongs to the Dharma-nature school, I shall examine the origin and meaning of these two important terms in the history of Chinese Buddhist thought: the zong of dharma-characteristics (faxiangzong 法相宗) and the zong of dharma-nature (faxingzong 法性宗).

ii. Faxiangzong as Yogācāra in Fazang’s works

In his commentary on the Buddhāvataṃsaka-sūtra (Huayan jing tanxuan ji 華嚴經談玄記), Fazang relates the story of how he met a Central Indian monk, Divākara (Dipoheluo 地婆訶羅, or Rizhao 日照 613-688), in the Taiyuan 太原 monastery of Chang’an  in 684, with the assistance of Fazang, he translated the Ghanavyūha-sūtra (Dasheng miyan jing 大乘密嚴經 T 681.), on which Fazang wrote a commentary (Dasheng miyan jing shu 大乘密嚴經疏 X vol. 34.). In addition, they worked together on the translation of the parts of the last chapter of the Buddhāvataṃsaka-sūtra, the Gāndavyūha-sūtra, that were missing from Buddhabhadrā’s translation. See Liu 1979: 8-9.

428 Ng 2003: 78.
429 On Divākara, see Forte 1974.
430 Divākara is said to have translated 18 works between 676 and 687. Kaiyuan shijiaolu 開元釋教錄 T55, no. 55, p. 564, a12-17. With the assistance of Fazang, he translated the Ghanavyūha-sūtra (Dasheng miyan jing 大乘密嚴經 T 681.), on which Fazang wrote a commentary (Dasheng miyan jing shu 大乘密嚴經疏 X vol. 34.). In addition, they worked together on the translation of the parts of the last chapter of the Buddhāvataṃsaka-sūtra, the Gāndavyūha-sūtra, that were missing from Buddhabhadrā’s translation. See Liu 1979: 8-9.
and asked him whether Indian monks distinguish between provisional and actual (quanshi 權 實) teachings. In his reply, Divākara said that there were two famous Indian masters of the Nālandā monastery: Śīlabhadra ( Jiexian 戒 賢 529-645) and Jñānaprabha (Zhiguang 智光 ). He interprets their views on the different levels of Buddhist teachings in the following way.

Śīlabhadra, a disciple of Dharmapāla (Hufa 護法 530-561), who belongs to the lineage of Maitreya (Mile 彌勒) and Asaṅga (Wuzhu 無著 310-390?), establishes three levels of teachings on the basis of Saṃdhinirmocana-sūtra 聖法経 and Yogācārabhūmi Śāstra 摩訶止觀論. In the first period, Hīnayāna teaches the emptiness of living beings (shengkong 生空), but fails to realise the true principle (zhenli 真理) of the emptiness of dharmas (fakong 法空). In the second period, the Prajñāpāramitā-sūtras advocate the emptiness of dharmas. The correct principle (zhengli 正理) of Mahāyāna is revealed only in the third period, when the tenets of Yogācāra, i.e. three natures and three non-natures, are taught. In addition, these three levels of teaching are explained in terms of the capacity of the audience, the teaching, and the revelation of principle. In the first period, only śrāvakas are taught exclusively Hīnayāna teachings that reveal the principle of emptiness of the person. In the second period, only bodhisattvas are taught exclusively Mahāyāna teachings that show the emptiness of both the person and dharmas. In the third period, beings of various capacities are instructed in all vehicles that expose both emptiness and existence (kongyou 空有). As the third period comprises all capacities, teachings and principles, it represents the level of explicit statement (nītārtha, liaoyi 了義).

Jñānaprabha, who belongs to the lineage of Mañjuśrī (Wenshu 文殊) and Nāgārjuna (Longshu 龍樹 ca. 150-250), follows in the footsteps of Āryadeva (Tipo 提婆 170-270) and Bhāvaviveka (Qingbian 清辯 500-570). He distinguishes three levels of teachings on the basis

431 Empress Wu established this monastery by converting her mother’s residence after she passed away. She appointed Fazang as the first abbot. See Liu 1979: 8.
433 Śīlabhadra was Xuanzang’s 玄奘 (600-664) teacher at Nālandā, and is mentioned in his famous record of his travels, Xiyuji 西域記 T 2087. See Xiyuji 西域記, T51, no. 2087, p. 914, c2-p. 915, a2; p. 924, a3-7; Lusthaus 2002: 395-397.
434 Mochizuki 3571.
435 According to the legend, Maitreya took Asaṅga to the Tuṣita where Yogācāra works were given to him. Some scholars suspect that Maitreya could be a historical person, Asaṅga’s teacher, who is referred to as Maitreyanātha. See Williams 1989: 80-81.
436 It is interesting to note that Xuanzang’s biography (Da Tang Daciensi sanzang fashi zuan 大唐大慈恩寺三藏法師傳 T50, no. 2053.) by Huili 慧立 and Yanchong 彦悰 cites a letter by Xuanzang where Śīlabhadra is said to be the successor to both Āryadeva and Nāgārjuna. This contradicts Divākara’s alleged account that associates Śīlabhadra exclusively with Āryadeva and the Yogācāra. See Li 1995: 231.
of the Prajñāpāramitā-sūtras and Mālamadhyamakakārikā. In the first period, Buddha instructed people of small capacity in the Hīnayāna teaching, according to which both mind and objects exist (xinjing juyou 心境俱有). In the second period, the faxiang of Mahāyāna (faxiang dasheng 法相大乘) is taught to people of mediocre capacity. It explains that objects are empty, while the mind is existent (jingkong xinyou 境空心有), which is the principle of consciousness-only. However, these people cannot understand the equality of true emptiness (pingdeng zhenkong 平等真空). In the third period, the wuxiang of Mahāyāna (wuxiang dasheng 無相大乘) is taught to people of superb capacity. It argues that the equal emptiness of both objects and the mind is the level of true explicit statement (zhen liaoyi 真了義). In the first period, the audience consisted of the two vehicles which must refer to śrāvaka-śrāvaka and pratyekabuddha-yāna; in the second, it was made up of the followers of both Hīnayāna and Mahāyāna, and in the third, it was only bodhisattvas. In terms of teaching, the first period is the teaching of Hīnayāna, the second is that of three vehicles (sansheng 三乘), and the last period is that of one vehicle (yisheng 一乘). As regards the revelation of principle, the heretical view of self-nature (zixing 自性) is refuted in the first period, clinging to the essential being of those things that dependently arise is refuted gradually in the second, and the apparent existence still retained in the second period is refuted in the third.

The classification of the two Indian masters can be summarised in two tables:

(Classification by Jñānaprabha)
Śīlabhadra’s classification is quite well-known from the Samdhinirmocana-sūtra as the three turnings of the Dharma-wheel. According to this scripture, Buddha’s teaching can be divided into three successive periods. The first period is the Hīnayāna when the emptiness of self was preached. In the second period, the emptiness of all dharmas was proclaimed in the Prajñāpāramitā-sūtras. However, the hidden meaning of these sūtras was revealed only in the third period, which is the teaching of the Samdhinirmocana-sūtra. This is the explicit meaning of the teachings that require no further explanation.\(^{437}\) By the time Bhāvaviveka lived, doctrinal disagreements between the followers of Yogācāra and Madhyamaka had come to the fore. Though he was willing to borrow some methods from his opponents, he was critical of Yogācāra, and maintained the basic Madhyamaka principle of the emptiness of all dharmas, including consciousness.\(^{438}\)

Fazang introduced two names: Faxiang (characteristics of dharmas) and Wuxiang (without characteristics). He applied the first name to the Yogācāra, and though it was a rather pejorative designation, suggesting that it was a kind of Hīnayāna school dealing only with the characteristics of dharmas, it became the traditional name for this Indian school of Buddhist thought in East Asian Buddhism. He applied the term Wuxiang to the Madhyamaka school of thought, as it denied the existence of characteristics. Divākara’s account of the Indian classification of Buddhist teaching must have exercised a great influence on Fazang, because he refers to it in his other works as well.\(^{439}\) This small episode in the history of Chinese Buddhism sheds light on the process usually referred to as the ‘sinification of Buddhism’. Fazang’s encounter with Divākara shows that there was an active dialogue between Chinese and foreign monks during the transmission of Buddhism.\(^{440}\)

In his commentaries on the Awakening of Faith and on the Dasheng fajie wuchabie lun 大乘法界無差別論, in which he discussed the Indian Buddhist teachings, Fazang distinguishes four cardinal principles (zong 宗): (1) clinging to the [existence] of dharmas through their characteristics (suixiang fazhi zong 隨相法執宗); (2) real emptiness without characteristics (zhengong wuxiang zong 真空無相宗); (3) consciousness-only [established by] the characteristics of dharmas (weishi faxiang zong 唯識法相宗); and (4) the dependent

440 Robert Sharf has a different view, arguing that “whatever ‘dialogue’ transpired took place among the Chinese themselves”. Sharf 2002: 19.
arising of the tathāgatagarbha (rulaizang yuanqi zong 如來藏緣起宗). These four cardinal principles refer to the teachings of Hīnayāna, Madhyamaka, Yogācāra and Tathāgatagarbha, respectively. He defines these lineages with the help of the basic Huayan paradigm: phenomena (shi 事) and principle (li 理). Hīnayāna clings to the characteristics of phenomena. Madhyamaka reveals the principle by the coalascence with phenomena. Yogācāra provides a description of various aspects of phenomena that arise on the basis of principle. The Tathāgatagarbha discusses the interpenetration and non-obstruction of principle and phenomena. In addition, in his commentary on the Laṅkāvatāra-sūtra, he again furnishes these four kinds of cardinal principles, though with their names slightly changed: (1) existence of characteristics (youxiang zong 有相宗); (2) non-existence of characteristics (wuxiang zong 無相宗); (3) characteristics of dharmas (faxiang zong 法相宗); and (4) ultimate truth (shixiang zong 實相宗).

| names in the commentary on the Awakening of Faith | clinging to the [existence] of dharmas through their characteristics | real emptiness without characteristics | consciousness only [established by] the characteristics of dharmas | the dependent arising of the tathāgatagarbha |
| names in the commentary on the Laṅkāvatāra- | existence of characteristics | non-existence of characteristics of dharmas | characteristics of dharmas | real characteristics |

\(^{446}\) A master of the Sarvāstivāda school. Mochizuki 3543.

\(^{447}\) He is the author of Dasheng fajie wu chabie lun 大乘法界無差別論, T31, no. 1626, 1627. Fazang wrote a commentary on it titled Dasheng fajie wu chabie lun bingxu 大乘法界無差別論疏并序, T44, no. 1838. Mochizuki 925-926.
iii. The interfusion of xing and xiang in Fazang’s works

While Fazang’s Huayan master Zhiyan mainly applied various tenets of Yogācāra philosophy, Fazang often referred to Madhyamaka in his works. As Kamata Shigeo demonstrated, the great master of the Sanlun 三論 lineage, Jizang 吉藏 (549-623), had a considerable impact on Fazang’s philosophy. Fazang intended to transcend the scope of Yogācāra by incorporating elements of Madhyamaka. In his commentary on the Laṅkāvatāra-sūtra, in which he discussed the nature of dependent arising (yuānqí xǐng 緣起性), he argued that it is actually both existent and empty, that these two concepts complement one another and form one unity. Nāgārjuna explained that existence does not differ from emptiness (you bù yì kōng 有不異空), as Asanga made clear that emptiness does not differ from existence (kōng bù yì you 空不異有). However,

“The later generation of philosophers lived in a degenerate age and their wisdom was slight. If they heard about the emptiness [of dependent arising], they said that [this concept] interrupts causality. If they heard about the existence [of dependent arising], they said that [this concept] obstructs real emptiness (zhènkōng 真空). Therefore, Bhāvaviveka refuted the existence that is in contradiction with emptiness. Making this extreme view return to emptiness is the only way to show the existence that is identical with emptiness (jíkōng zhì you 即空之有). Thus, causality is not lost. Dharmapāla and others refuted the emptiness that extinguishes existence. To establish causality is the only way to reveal the emptiness that is identical with existence (jíyōu zhī kōng 即有之空). Thus, real nature (zhēnxìng 真性) is not hidden. Each of these two masters refuted one extreme; thus, they show the middle path together. Their views mutually become complete, and are not contradictory.”

---

448 For an introduction to Jizang’s philosophy, see Liu 1994: 82-187.
This passage can be regarded as a Huayan contribution and solution to the well-known debate between the followers of Yogācāra and Madhyamaka on the theory of the three natures advocated by the Yogācārins. Yogācārins held that though the imaginary nature is empty the dependent nature and the perfect nature have both empty and real aspects. Those things that arise out of the seeds contained in ālaya are empty, but the ālaya and the seeds are real. The perfect nature is presented as the pure ālaya in the Cheng weishi lun; it must therefore be the ultimate reality, and cannot be empty. Being advocates of the emptiness of all dharmas, the Mādhyamikas refuted the existence of these two natures as well. In order to harmonize these two views, Fazang formulated a Huayan interpretation of the doctrine of three natures. He wrote that each of the three natures has an empty and an existent aspect:

“Each of the three natures has two aspects. The two aspects of the perfect [nature] are changlessness and responding to condition. The two aspects of the dependent [nature] are semblance of existence and being without self-nature. The two aspects of the imaginary nature appear to have being to the ordinary senses and have non-existence in reality.”

三性各有二義。真中二義者。一不變義。二隨緣義。依他二義者。一似有義。二無性義。所執中二義者。一情有義。二理無義。
As the empty aspects of the three natures are identical, and the existent aspects are also identical, the identity of the three natures is established. The former aspects are designated as “the eternal origin without destroying derivative 不壞末而常本,” and the latter aspects as “the eternal derivative without moving origin 不動本而常末.” With these designations he places the question into the context of Chinese philosophy. On the other hand, the empty aspects are not identical with the existent aspects; hence, the difference between the three natures is established as well. Fazang concludes with the typical Huayan statement that “reality includes the false derivative and falsehood penetrates the source of reality; it is the interfusion and non-obstruction of nature and characteristics 真該妄末妄徹真源。性相通融無障無礙.” Various versions of “interfusion of nature and characteristics,” such as interpenetration of nature and characteristics (xingxiang jiaoche 性相交徹) and perfect interfusion of nature and characteristics (xingxiang yuanrong 性相圓融), are found throughout Fazang’s works. Terms such as real-false and origin-derivative frequently occur in the Chinese Buddhist texts, but the paradigm of xingxiang seems to be a novelty. Where does it originate?

Lusthaus attributes this invention to Xuanzang, who was a prominent figure of his day and Fazang’s contemporary. In verses 5 and 7 of his translation of Trīṃśikā he – supposedly deliberately – altered the original Sanskrit text through the interpolation of xingxiang, though he is famous for the accuracy of his translations. In the definitions of mano-vijñāna and the five consiousnesses we read that “discerning perceptual-objects is its nature and characteristic” and “willing-deliberating is its nature and characteristic”, respectively. In the Cheng weishi lun, Xuanzang explains xing and xiang as self-nature (svabhāva, zixing 自性) and activity-characteristic (ākāra, xingxiang 行相), respectively. In the case of the five consciousnesses, discerning perceptual-objects is their self-nature, and the functioning (yong 用) of this nature is their activity-characteristic. In the same way, the willing-deliberating is the self-nature of the mano-vijñāna, and the functioning of this nature is its activity-characteristic. The text goes on to say that these natures and functions define each consciousness. This is to say that the self-natures of the consciousnesses are none other than their activities.

As Xuanzang’s usage of xing versus xiang is confined to a rather technical discussion of Yogācāra, other considerations should be taken into account in tracing Fazang’s application of

455 Yoshizu 1983.
456 For a discussion of xingxiang in Xuanzang’s translation, see Lusthaus 2002: 371-373.
First, it can be explained as emptiness of self-nature (zixing kong 自性空) because the ultimate nature of dharmas is emptiness. There is no doubt that this is the stance of Madhyamaka in this discussion. Thus, the interfusion of nature and characteristics is another sinitic explanation of the famous Mahāyāna formula, “emptiness is form and form is emptiness” just like “principle is phenomena”, advocated by the first patriarch of the Huayan lineage, Du Shun 杜順 (557-640). With the introduction of this short expression, interfusion of nature and characteristics, Fazang managed to achieve the same goal as with the discussion of the three natures: to harmonize Yogācāra and Madhyamaka. Second, xing can refer to tathāgatagarbha, or Buddha-nature that leads to another explication on the basis of the Chinese transmission of Yogācāra that includes Tathāgatagarbha teachings. One of the important tenets of Huayan Buddhism is the theory of nature-origination (xingqi 性起), which clarifies how the world evolves out of a pure mind. Thus, xing means the nature out of which the world evolves, and xiang represents the characteristics of the outer world evolved from nature. However, this Yogācāra is not the elementary teaching of Mahāyāna represented by the teachings of Xuanzang, but rather the advanced teaching of Mahāyāna, that is Tathāgatagarbha. Nonetheless, this deeper level of interfusion apropos of xing and xiang would later be discovered and discussed by the fourth patriarch of the Huayan lineage, Chengguan 澄觀 (738-839), who was the most loyal disciple of Fazang, though they never met.

iv. Ten differences between faxingzong and faxiangzong

Fazang’s disciple, Huiyuan 慧苑 (673-743), did not discuss the teachings of the two Indian masters elaborated in great detail by Fazang, putatively because the tenet of dependent arising did not play a central role in his philosophy. Chengguan, however, took up this topic again in his commentary on the Huayan jing. At the beginning of his account of Yogācāra and Madhyamaka, he recapitulates the two versions of three periods summarised by

---

457 This name originates from the title of chapter 32 of the sixty-fascicle Huayan jing, Baowang rulai xingqi pin 寶王如來性起品. The version of the eighty-fascicle Huayan jing will be discussed below.
459 Yoshizu 1983: 308-309. For a recent study on Huiyuan’s philosophy, see Li 2000.
the third patriarch.\textsuperscript{460} He uses the names faxiang dasheng and wuxiang dasheng introduced by Fazang, but he often refers to them as two zongs 宗. Like Fazang, he arrives at the conclusion that these two zongs complement one another; neither of them can stand alone, and they must be combined. It is important to note that at the end of this section in his Subcommentary on the Buddhāvatamsakasūtra (Da fangguang fo huayan jing suishu yanyi chao 大方廣佛華嚴經隨疏 演義鈔), Chengguan identifies Madhyamaka as faxingzong:

“From the aspect of the first school, the faxiangzong is the ultimate [meaning of the teaching] and faxingzong is not ultimate. From the aspect of the second school, the faxingzong is the ultimate, and the faxiangzong is not ultimate. Therefore, they are both ultimate and not ultimate, and equally share the principle.”

As Chengguan continues, in order to combine these two lineages first the differences between them should be known. He lists ten differences:\textsuperscript{462}

(1) one vehicle or three vehicles 一乘三乘
(2) one nature or five natures 一性五性
(3) consciousness is only real or false 唯心真妄
(4) the tathatā is dependent arising or immovable 真如隨緣凝然
(5) the emptiness and existence related to the three natures are identical or different 三性空有即離
(6) the number of living beings is not increasing or not decreasing 生佛不增不減
(7) the two truths are identical or different, as well emptiness and existence are identical or different 二諦空有即離
(8) the four characteristics are simultaneous or successive 四相一時前後
(9) the subject and the object of enlightenment are identical or different 九能所斷證即離
(10) the body of Buddha is unconditioned or conditioned 佛身無為有為

\textsuperscript{460}Da fangguang fo huayanjing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 510, b23-c22. Da fangguang fo huayan jing suisha yanyi 大方廣佛華嚴經隨疏演義, T36, no. 1736, p. 52, c7-p. 53, b27. Xinxiu Huayan jing shuchao 新修華嚴經疏鈔 vol. 1, 547-564.
\textsuperscript{461}Da fangguang fo huayanjing shu 大方廣佛華厳經疏, T35, no. 1735, p. 511, a2-6.
In each of the ten statements, the first part is the tenet of the faxingzong whereas the second is that of the faxiangzong. For example, one nature and one vehicle form part of the doctrines of faxingzong, and the three vehicles and five natures are proclaimed by faxiangzong.

The first two differences are lumped together as the one vehicle, and three vehicles are closely associated with one nature and three natures, respectively. If the doctrine of five natures is regarded as the ultimate teaching, then the doctrine of three vehicles is evident. Those who have the śrāvaka-nature belong to the śrāvaka-vehicle, those who have the pratyekabuddha-nature belong to the pratyekabuddha-vehicle, those who have the bodhisattva-nature belong to the bodhisattva-vehicle. Those who do not have a determinate nature can belong to any of the three vehicles, while those who do not have an untainted nature do not belong to any of the three vehicles but to the vehicle of men and gods. Thus, the five vehicles are established. In contrast to this stance, the faxingzong accepts the doctrine of one nature, i.e. universal salvation, as the ultimate teaching; it therefore proclaims the one vehicle.

In fact, the question of Buddha-nature is a long debated topic in East Asian Buddhism. It is a well-known story in the history of Chinese Buddhism that Daosheng 道生 (ca. 360-434) was bold enough to argue against the so-called southern translation of the Nirvāṇa-sūtra which says that icchantikas can never become Buddha. After the northern translation of this sūtra supported Daosheng’s claim, the view of universal liberation became widespread in China. However, Xuanzang took up the orthodox Yogācāra position and excluded icchantikas from salvation. But even some of his disciples did not share the opinion of their teacher. His most talented student, Fabao 法寶 (early 8th c.), claimed in Yisheng foxing jiujing lun 一乘佛性究竟論 that one vehicle was the actual teaching (shijiao 实教) and the three vehicles were only provisional teachings. His other disciple Huizhao 慧沼 (650-714) refuted Fabao’s views in his Nengxian zhongbian huiri lun 能顯中邊慧日論. Approximately during Chengguan’s lifetime, a long debate on this problem raged in Japan between the Hossō 法相...

463 This is discussed in great detail in the Commentary and Subcommentary. See Da fangguang fo huyan jing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 511, a6-p. 512, b13; Da fangguang fo huyan jing saishu yunyi 大方廣佛華嚴經隨疏演義, T36, no. 1736, p. 54, a25-p. 61, b10. Xinxiu Huayan jing shuchao 新修華嚴經疏鈔 vol. 1. 566-642.

464 For Daoan’s view on icchantikas, see Kim 1990: 34-38. The Fo shuo daban nihuan jing 佛說大般泥洹經 (T12, no. 376.) translated by Faxian 法顯 and Buddhabhadra was called the southern text, while the Daban nieban jing 大般涅槃經 (T12, no. 374.) translated by Dharmakṣema was known as the northern text. See Ch’en 1964: 113-114. For a study on the Buddha-nature in the Nirvāṇa-sūtra, see Liu 1982.

466 T45, no. 1863.
monk Tokuitsu 德一 (780?-842?), and the founder of the Tendai 天台 school, Saichō 最澄 (767-822), resulting in several works by these two eminent scholars.467

The next eight differences are discussed under the rubrics of the elementary and advanced teachings of Mahāyāna.468 On the level of the elementary teaching, mostly the characteristics are elaborated, the nature of dharmas, i.e. their absolute aspect, appears only as one of the hundred dharmas.469 On the other hand, the advanced teaching mainly expounds on the nature of dharmas, and the way in which characteristics can revert to nature. This is to say that the dharmas, like skandhas, are empty, and their emptiness is their nature. The faxingzong also teaches about the characteristics, but its main purport is to reveal nature as the enigmatic subtlety (xuanmiao 玄妙). This explanation seems to be in accord with the tenets of Yogācāra and Madhyamaka, as Yogācāra teaches the doctrine of a hundred dharmas, and Madhyamaka emphasises emptiness as the ultimate reality of dharmas. The third and fourth differences touch upon the nature of the ālayavijñāna, which is a key issue in the Chinese transmission of Yogācāra and Tathāgatagarbha philosophies.470

According to the faxiangzong, the eighth consciousness, the ālayavijñāna, possesses only the aspect of samsāra and is only tainted; Chengguan therefore depicts it as “false”. This impure consciousness is the cause of both rebirth in samsāra and attaining nirvāṇa. He cites Xuanzang’s translation of Mahāyāna-saṃgraha as a source for this statement.471 In contrast to this, the faxingzong argues that this consciousness also has an aspect of the absolute mind (zhenxin 真心) due to the untainted tathāgatagarbha. He refers to the famous statement from the Awakening of Faith in Mahāyāna (Dasheng qixin lun 大乘起信論) according to which the samsāra and that which is beyond samsāra are fused in ālayavijñāna.472

The issue at stake is the relationship between the absolute and phenomena.473 Is the tathatā the Absolute dependent arising, or is it immovable? Does the Absolute have anything to do with the phenomenal world? According to the interpretation of the final teaching of

---

467 In this debate, Saichō often referred to the arguments of Fabao. See Groner 2000: 91-106.
469 The tathatā is one of the unconditioned dharmas (asaṃskṛta-dharmas). See Lusthaus 2002: 553.
470 Paramārtha (499-569) played a crucial role in spreading Yogācāra and Tathāgatagarbha philosophies in China, although these teachings had been known to the Dilun 地論 masters before his arrival in China. For the process of the transmission of Yogācāra and Tathāgatagarbha teachings, see Paul 1984 and Gimello 1976: 212-337.
473 Whalen Lai translated and analysed the relevant part of the Huayan yisheng jiaoyi fenzhi zhang 華嚴一乘教義分齊章. See Lai 1986.
Mahāyāna (i.e. faxingzong), the Absolute and phenomena can be described with the ‘water and wave’ metaphor. Due to the wind of ignorance, waves of phenomena rise and fall, yet they are not different in essence from the water of the Absolute. In contrast with this explanation, the elementary teaching of Mahāyāna (i.e. faxiangzong) can be presented by the metaphor of ‘house and ground’. The ground supports the house but is different from it.\textsuperscript{474}

Referring to the same scriptural sources as Fazang does, Chengguan claims that the dependent arising of tathatā is taught on the level of advanced teaching. However, he also emphasises that tathatā not only has a dependent arising aspect, but also an immovable one. It can be immovable because it is dependent arising, and it is dependent arising because it is immovable. If the water were to be deprived of its nature of moisture, how could it create waves under the influence of wind? Phenomena can be established by retaining the self-nature of the Absolute. On the other hand, if tathatā is not dependent arising, its essence cannot penetrate conditions (bianyuan 遍緣). If its essence cannot be found in conditions, how can it be unchanged (bubian 不變)? These two aspects are not contradictory, but complement one another.

The next topic touches upon the question of differing opinions between the followers of Yogācāra and Madhyamaka on the status of the three natures. Chengguan seems to be quite aware of the dispute on this matter in Indian Buddhism. As we saw above, Yogācāra attributed emptiness only to the imaginary nature, retaining some kind of existence of the other two natures. Chengguan explains that the dependent nature has a resembling existence and is therefore not nonexistent (siyou buwu 似有不無). Thus, it cannot be identical with the perfect nature that is revealed through the absence of self-nature. However, according to the faxingzong, the absence of self-nature in the dependent nature is identical with the perfect nature, and as absence of self-nature is emptiness, the perfect nature is identical with emptiness. This way, faxingzong demonstrates that the perfect nature is empty, just like the imaginary nature. The dependent arising (yinyuan 因緣) includes all three aspects, being identical with both emptiness and existence; hence, these are not separate.

The fifth difference is related to the first and second differences. According to the five natures of faxiangzong, beings of the fifth nature divested themselves of Buddha-nature forever and can never become Buddha. Consequently, they can never leave the realm of living beings; they are sentenced to maintain this world. Thus, this realm cannot decrease. The faxingzong teaches that the one principle is ubiquitous (yili qiping 一理齊平), that is to say

\textsuperscript{474} Ibid. 2-3.
the potency of becoming Buddha is inherent in all living beings including icchantikas. The realm of living beings cannot decrease, while the realm of Buddha cannot increase. Why? Because both living beings and Buddhas have already been in the domain of faxing, and faxing cannot increase faxing. This is similar to how the Eastern space cannot add anything to the Western space, i.e. the Western space cannot increase with the decrease of the Eastern space. In other words, Buddha and sentient beings share the same absolute nature; there is therefore nothing to increase or decrease.

In the next topic, two questions are discussed: first, the identity or difference of two truths; then, the identity or difference of emptiness and existence. These are closely related as emptiness and existence are regarded, especially by Madhyamaka, as absolute truth and mundane truth, respectively. According to faxiangzong, the mundane truth and the absolute truth are different, while according to faxingzong they are in fact identical, and as the Nirvāṇa-sūtra states it is only an upāya that there are two truths. The Absolute is not beyond the mundane, it is absolute if it is identical with the mundane. The former concentrates on discriminating the two truths, while the latter tends to fuse them. Chengguan warns against clinging to any of these positions one-sidedly. The faxiangzong argues that the cause ceases when the fruit is produced (guosheng yinmie 果生因滅). This way, the extremes of nihilism and eternalism are avoided, as existence is not eternal due to the cessation of cause, and is not interrupted due to the production of fruit. The way in which the faxingzong avoids the two extremes is to underline that emptiness is the emptiness that is identical with existence (jiyou zhi kong 即有之空), and existence is the existence that is identical with emptiness (jikong zhi you 即空之有). It is therefore empty but not interrupted, and existent but not eternal. Non-existence and existence are neither identical, nor different. This is how the middle way is achieved. If they were identical, then the meaning of existence and non-existence would be abolished. If they were different, then it would lead to the extremes of nihilism and eternalism. As is quite obvious, the differing views of Yogācāra and Madhyamaka on the absolute truth are found here. As we discussed above, Yogācāra does not accept the emptiness of absolute nature that is the absolute truth, while Madhyamaka strongly argued for it.

475 For the relevant passage cited by Chengguan, see Daban niepan jing 大般涅槃經, T12, no. 374, p. 443, a7-19.
The faxiangzong propounds the successiveness of the four characteristics (birth, duration, differentiation, cessation),\footnote{For the relevant passage from *Cheng weishi lun* cited by Chengguan, see T31, no. 1585, p. 6, a8-17. For the English translation, see Cook 1999: 34-35.} which is to say that something that was not existent is born due to various conditions. It then endures and in this duration it changes, and finally it reverts to non-existence. According to the faxingzong, the past, present and future are all empty; their essential natures are therefore extinct, and this is what Chengguan calls returning to nature through coalescence with characteristics (*huixiang guixing* 會相歸性). In this way, faxingzong establishes that the four characteristics are simultaneous.

The ninth difference concerns the result of religious practice. The faxiangzong states that the object and subject of enlightenment are different. It says that there are two aspects of wisdom: wisdom that eliminates delusion (*duanhuo* 斷惑) and wisdom that realises principle (*zhengli* 證理). According to one of the interpretations, the fundamental nondiscriminating wisdom (*genben zhi* 根本智), i.e. Buddha’s absolute wisdom, is able to eliminate the propensities (*suimian* 隨眠) of delusions concerning both principle and phenomena, while the subsequently acquired wisdom (*houde zhi* 後得智), i.e. wisdom related to the ordinary world, cannot. The other opinion is that this latter wisdom can eliminate only the propensities of delusions concerning phenomena.\footnote{This is discussed in *Cheng weishi lun* which is cited by Chengguan. See *Cheng weishi lun* T31, no. 1585, p. 54, c29-p. 55, a6. For the English translation, see Cook 1999: 337-338.} Consequently, the fundamental wisdom and the subsequently acquired wisdom are different. Regarding the wisdom that realises the principle, it says that wisdom that is the subject of enlightenment is conditioned (*youwei* 有為), but the principle that is realised by this wisdom is unconditioned (*wuwei* 無為). Thus, the subject and object of enlightenment are not identical. The faxingzong also discusses two aspects of wisdom. It shows that in both cases wisdom and the object of wisdom are not different. The wisdom that eliminates the delusion (*huo* 惑) and the delusion that is eliminated, in fact, share the same substance. If we search for the origin of delusion, it cannot be found anywhere; it is thus has a nonabiding origin (*wuzhuben* 無住本). Therefore, the origin of delusion is nonabiding; that is to say, it does not have an origin (*wuben* 無本). Next, this nonabiding origin is nothing more than a different name for the ultimate truth (*shixiang* 實相). Thus, the origin of the delusion is the essence of wisdom, and consequently their essences are not different. Regarding wisdom that realises the principle, Chengguan argues that the essence of wisdom is being without thought (*wunian* 無念), and it can be defined only with the help of
delusion; thus, wisdom does not have a self-nature (zixing 自性). This absence of self-nature is also the essence of tathātā that is realised in the process of enlightenment. As wisdom, subject, and the tathātā, object, have the same essence, i.e. not having self-nature, the identity of subject and object is established.

The last topic revolves around the conditioned or unconditioned nature of the body of Buddha. The main divergence lies in what the two lineages regard as the support of the transcendental wisdom. According to the faxiangzong, it is the seeds of the saṃsāric consciousness (shengmie shizhong 生滅識種), while according to the faxingzong it is the tathāgatagarbha. The Cheng weishi lun 成唯識論 clearly states that the four kinds of wisdom include all conditioned qualities of the stage of Buddha.478 As the four kinds of wisdom are born of seeds, they must therefore be conditioned. In addition, if the consciousness that gives birth to wisdom has a nature of saṃsāra, wisdom that is born out of it must be conditioned. The four kinds of wisdom are included in the three bodies of Buddha. Moreover, one of these four kinds of wisdom, the great perfect mirror wisdom (mahādarśana-jñāna, dayuanjing zhi 大圓鏡智), creates what a Buddha receives for his own use or enjoyment (zi shouyong 自受用); therefore, the body of retribution (sambhogakāya, baoshen 報身) is conditioned and uncontaminated (youwei wulou 有為無漏). However, the tathāgatagarbha, the supporter of wisdom is eternal, thus, that which is supported, i.e. wisdom, must also be eternal. The Awakening of Faith distinguishes between two kinds of enlightenment: one is that which beings originally possess (benjue 本覺), the other is that which is attained through cultivation (shijue 始覺).479 Consequently, the former is eternal as it exists as a principle (liyou 理有), whereas the latter is not because it requires conditions in order to be generated. Chengguan abolishes the distinction between these two kinds of enlightenment, stating that they are both eternal. On the one hand, enlightenment attained through cultivation from the aspect that it is generated it must be regarded as conditioned. On the other hand, it is identical with the nature of tathāgatagarbha, and thus is unconditioned. Even the nirmāṇakāya of the three bodies of Buddha is therefore eternal. If this is eternal, then the more subtle sambhogakāya must be eternal as well. Chengguan adds that wisdom must be identical with essence because if it existed outside essence then it would not be eternal.

479 Girard 2004: 30-37.
In order to evaluate the content of these differences it is worth examining the scriptural sources that Chengguan quotes to substantiate his statements. As we might expect, Chengguan often refers to the Cheng weishi lun and other Yogācāra works in discussing the teaching of faxiangzong, and cites Madhyamaka and Tathāgatagarbha scriptures to demonstrate the arguments of faxingzong. However, we also find Yogācāra works (Laṅkāvatāra-sūtra, Vasubandhus’s commentary on the Daśabhūmika-sūtra) and Mahāyāna sūtras (Lotus Sūtra, Nirvāṇa-sūtra, Vimalakīrti-sūtra) under the rubric of faxingzong. It is important to note that the Laṅkāvatāra-sūtra and Prajñāpāramitā scriptures are cited by both faxiangzong and faxingzong.

Fazang’s classification of teachings was at variance with that of his master Zhiyan (602-668) in that he exclusively identified the Huayan jing 華嚴經 with the perfect teaching while his master related it to the sudden teaching as well. In addition, they both regarded the Huayan jing as the separate teaching, and the Lotus Sūtra as the common teaching, but Fazang degraded the Lotus Sūtra to the level of the advanced teaching of the Mahāyāna.\textsuperscript{481} He thus established the superior position of Huayan, and his awareness of it was certainly enhanced by the lavish support that he received from Empress Wu 武 (r. 684-705). Fazang was eager to demonstrate that the one vehicle of Huayan is different from the one vehicle of Lotus Sūtra and from the one vehicle of Nirvāṇa-sūtra, proclaiming that the one vehicle of Huayan is the basic one vehicle (genben yisheng 根本一乘). Chengguan, however, identifies

\textsuperscript{481} Gregory 1991: 128-129; in his comprehensive book, Yoshizu Yoshihide discusses the separate teaching of one vehicle as a central concept of Fazang’s teachings. He demonstrates the distinction between separate and common teachings in Zhiyan’s writings; then he treats various aspects of this question in Fazang’s works. See Yoshizu 1991.
all one vehicles as faxing, accepting them as his own tradition. On the other hand, though he, unlike Fazang, does not draw a sharp distinction between separate and common teaching, he retains the superiority of Huayan:

“The ocean of this teaching is vast and profound; there is nothing that it does not include. Form and emptiness exchange their brightness, merit and function interpenetrate. Concerning its content, it contains the five teachings in their entirety. It comprises all teachings as far as the teaching of men and gods. This is the only way to reveal its profundity and broadness. It is similar to how rivers do not include the ocean, but the ocean must include rivers. Though it includes all rivers, it tastes salty everywhere. Therefore, every drop of the ocean is different from rivers. The previous four teachings do not include the perfect teaching, but the perfect teaching must include those four teachings. Although the perfect teaching includes the four teachings, it goes beyond them. Thus, ten virtues and five prohibitions can also be found in the perfect teaching, but they are not those of the third and the fourth teachings, not to speak about those of the first and the second teachings. [These four teachings] have teachings in common [with the perfect teaching], but they do not hold the same position. As this perfect teaching is described as broad, it is named immeasurable vehicles. It is said to be profound because this teaching reveals the one vehicle. There are two kinds of one vehicle. The first is the one vehicle of common teaching that is common in the sudden and real [final] teachings. The second is the one vehicle of separate teaching that perfectly comprises all merits. The separate teaching includes the common teaching, and the perfect teaching comprises all teachings.”

vi. Conclusion: is Huayan faxingzong?

It is quite clear from the discussion above that it was Chengguan who introduced the term faxingzong, and started to use the paradigm of faxiangzong versus faxingzong. In doing
so, he had recourse to philosophical frameworks established by Fazang. First, in treating Divākara’s classification of Indian Mahāyāna philosophies, Chengguan identified Madhyamaka with faxingzong. Second, on the basis of the paradigm of xing versus xiang propounded by Fazang, Tathāgatagarbha teachings also came to be included in faxingzong. Thus explaining the ten differences between faxiangzong and faxingzong, the stance of faxingzong is described by the teachings of Madhyamaka and/or Tathāgatagarbha. In terms of scriptures that represent faxiangzong and faxingzong, we have seen that some scriptures belong to both categories. The paradigm of faxiangzong versus faxingzong is thus a hermeneutical, ‘transscriptural’ device for the classification of Mahāyāna teachings. It is more flexible than the classical Huayan classification of five teachings advocated by Fazang, which simply qualifies Yogācāra and Madhyamaka as elementary teachings of Mahāyāna, and Tathāgatagarbha as the final teaching of Mahāyāna. This paradigm attempts to sort out some principles in the giant corpus of Mahāyāna literature, and one group of principles or guidelines is called faxiangzong while the other is referred to as faxingzong. Consequently, the term zong 庸 should be rendered as a principle or guideline and definitely not as a ‘school’.

When Chengguan elaborates on the ten differences, he says that faxiangzong is the elementary teaching of Mahāyāna while faxingzong is the final teaching of Mahāyāna. If faxingzong is the final teaching, it cannot be identified with Huayan, which represents the perfect teaching, the highest of all teachings. The final teaching claims that the tathāgatagarbha is not isolated from the world of life and death; it is thus described as the non-obstruction of principle and phenomena (lishi wuai 理事無礙) using the Huayan terminology. The perfect teaching also includes this important tenet, but it goes one step further. It advocates the notion that on the basis of the non-obstruction of principle and phenomena, the interrelatedness of phenomena becomes established. This interrelatedness is depicted as the non-obstruction of phenomena (shishi wuai 事事無礙). As we have seen above, the perfect teaching includes the set of advanced principles called faxingzong, but they are not identical: “although the ocean includes all rivers, it tastes salty everywhere.”

---

b. A debate between Faxingzong and Faxiangzong on the nature of Buddha’s mind

The *Buddhāvataṃsaka-sūtra*, one of the largest Mahāyāna *sūtras*, consists of numerous chapters that treat the teachings of emptiness, *upāya*, the bodhisattva career and other major Mahāyāna tenets. Some of these chapters were circulated independently before the compilation of this collection of *sūtras* as attested by their early Chinese translations. The most famous *sūtras* are undoubtedly the *Daśabhūmika-sūtra* and the *Gaṇḍavyūha-sūtra*.\(^{486}\) Although the *Buddhāvataṃsaka-sūtra* has been preserved only in Chinese and Tibetan translations,\(^{487}\) the Sanskrit originals of these two works are extant.\(^{488}\)

As Takasaki Jikidō pointed out, another remarkable part of this collection is the *sūtra* entitled *Manifestation of the Tathāgata*. He regards it as a precursor of the *tathāgatagarbha* theory, as the *sūtra* says that all beings are endowed with the wisdom of *Tatahāgata* but due to their ignorance, delusion and grasping they cannot realise it. The reason why Buddha appeared in the world is to teach living beings in order to enable them to realise their inner potencies.\(^{489}\) On the basis of the Tibetan translation he reconstructed the Sanskrit title as *Tathāgata-utpatti-sambhava-nirdeśa-sūtra*.\(^{490}\) Today we have five versions of this work, four in Chinese, one in Tibetan:

1. *Fo shuo rulai xingxian jing* 佛說如來興顯經 (T10, no. 291, p. 592, a1–p. 617, b7)
2. *Baowang rulai xingqi pin* 寶王如來性起品 (T9, no. 278, p. 611, b1–p. 631, b5)\(^{491}\)

\(^{486}\) For a study of *Gaṇḍavyūha*, see Gómez 1967. The chief protagonist of this work is a boy called Sudhana who meets spiritual friends (*kalpyanamitra*) along the way in his search for enlightenment. This story was often depicted in Asian Art. See Fontein 1967. Recently, paintings of Sudhana’s journey along with the inscription of the Tibetan text were discovered in the temple of Ta Pho. See Steinkellner 1995, 1999.

\(^{488}\) For the bibliographical information of the editions of these Sanskrit texts, see Nakamura 1980: 195–196.

\(^{489}\) For Takasaki’s discussion of this *sūtra* from the aspect of the development of Tathāgatagarbha theory, see Takasaki 1974: 574–602. For a recent summary, see Zimmermann 2002: 11–93.

\(^{490}\) Takasaki 1958. Although the Sanskrit title has not survived, the text’s famous metaphor of the big book that is as big as the world and describes the whole world but can enter one particle of an atom is cited by the *Ratnagotravibhāga*. See Takasaki 1966: 189–192. For an analysis of the title, see Itō 1967.

\(^{491}\) For a detailed study of this version, see Kaginushi 1972a. The Chinese exegetes of the 80-fascicle *Huayan jing*, Huiyuan and Chengguan, remarked that the word *xing* in the title had been added by the translator. See *Xu huayan jing lueshu karding ji* 頒華嚴經略疏刊定記, X03, no. 221, p. 828, b5–8 // Z 1:5, p. 260, b16-c1 // R5, p. 519, b16-p. 520, a1; *Da fangguang fo huyanjing shu* 大方廣佛華嚴經疏, T35, no. 1735, p. 872, a11–12. According to the Tibetan translation of the *sūtra*, *utpatti* (skyê-ba), or *sambhava* (*byung-ba*), or combinations of them, were rendered as *xingqi* by the translator. See Takasaki 1960: 282–289. Nonetheless, one major tenet of *Huayan* Buddhism, nature-origination, took its name from this
3. *Rulai chuxian pin* 如來出現品 (T10, no. 279, p. 262, a15–p. 278, c22)

4. *Da fangguang rulai xingqi weimizang jing* 大方廣如來性起微密藏經 (Kimura 1999)

5. *De-bzhin-gshegs-pa skye-ba 'byung-ba* (Peking 761: 75b2–142b4)

The first is the earliest Chinese translation done by Dharmarakṣa between 265 and 289. This early translation clearly shows that it is an early Mahāyāna sūtra, and had existed independently before it came to be a chapter in the *Buddhāvatamsaka-sūtra*. The second and third renditions are included in the 60- and 80-fascicle *Huayan jing*, respectively. The fourth version has been lost in China but was found in Japan among the manuscripts discovered recently in the Nanatsudera temple of Nagoya. However, this text seems to be a version of the *Baowang rulai xingqipin* as it is very similar to it, but contains several errors, probably due to unreliable copying. This demonstrates the popularity of this *sūtra* because it was taken out of the *Huayan jing* and was circulated independently. The fifth version is a chapter from the Tibetan translation of the *Buddhāvatamsaka-sūtra*.

At the beginning of the *sūtra*, Buddha appears as emitting light that illuminates all the worlds and extinguishes the suffering of all beings. Finally, the light enters the head of the bodhisattva Wondrous Quality of the Origination of Tathāgata-nature. Inspired by the light of the Buddha the bodhisattva asks who is able to reveal Buddha’s teaching. Then Buddha emits light from his mouth again which arrives at the mouth of bodhisattva Samantabhadra. In reply to the question of bodhisattva Wondrous Quality of the Origination of Tathāgata-nature, he relates that Buddha shows this kind of transformation before declaring the teaching of the manifestation of Tathāgata. Next, bodhisattva Wondrous Quality of the Origination of Tathāgata-nature poses ten questions, to which Samantabhadra replies in the remaining part of the title. This reveals how the absolute becomes manifested in the phenomenal world. For studies of this important teaching, see Kamata 1957, 1965: 565–574, Endō 1965, 1966, 1967, Kaginushi 1972b, 1986, Gimello 1976: 442–445, Yoshizu 1983b, Nakajō 1988, Chung 1991, and Gregory 1991: 187–192, 242–243.

Kawano Satoshi collated this version with the Tibetan translation, and concluded that it has several interpolations that are due partly to the impact of Dark Learning (*xuanxue* 玄學) and partly to the inclusion of Dharmarakṣa’s own commentaries on the text. See Kawano 1995. Kagawa Takao showed that due to the early production of this version, the theory that all living beings are endowed with Tathāgata-jñāna is not as well formulated as in the other later versions. See Kagawa 1967. For Dharmarakṣa’s method of translation, see Boucher 1996 and Karashima 1998.

For a report on this discovery, see Ochiai 1991. For pictures and an edition of the text, see Kimura 1999.

The first Chinese source that records the existence of this *sūtra* is the *Lidai sanbao ji* 歷代三寶記 written by Fei Changfang 費長房 in 597. See T49, no. 2034, p. 68, a22. According to this, it was translated during the Yuankang 元康 period (291–299) of Western Jin, and its translator is unknown (68b1–2). Prior to the discovery of the manuscript in Nanatsudera, Kaginushi Ryōkei had demonstrated that this translation cannot antedate the 60-fascicle *Huayan jing*. See Kaginushi 1973, 1974. His hypothesis was substantiated by the manuscript.

I have been working on the critical edition of the Tibetan text, collating the following versions: Peking, Phug-brag, Narthang, Lithang, Derge, Lhasa, Stog Palace, London, and Tokyo.
the sūtra. These ten topics are as follows: 1. the characteristics of the manifestation of Tathāgata; 2. the body of Tathāgata; 3. the voice of Tathāgata; 4. the mind of Tathāgata; 5. the realm of Tathāgata; 6. the deeds of Tathāgata; 7. the perfect enlightenment of Tathāgata; 8. the turning of the Dharma wheel by Tathāgata; 9. the parinirvāṇa of Tathāgata; 10. the merits originated from seeing, hearing and being associated with Tathāgata.\[496\]

i. The original passage in the Buddhāvatsāka-sūtra

The passage we will study here is found at the beginning of the fourth topic where the mind of Tathāgata is described.

1. Buddha said: “Sons of Buddha, how can the bodhisattva enter the [realm of] mental activity of Tathāgata, Arhat and the completely enlightened being? The Tathāgata cannot be a thought of mind, neither a name that is discrimated, and neither a consciousness that [one] can be aware of. Only if [the bodhisattva understands that] Tathāgata has no mind, can he enter [the realm of] infinite thought.”

2. Son of Buddha, how should the bodhisattva mahāsattvas know and see the mind of Tathāgata, Arhat and the completely enlightened being? Sons of Buddha, the bodhisattva mahāsattvas know that Tathāgata cannot be defined by mind (citta), thought (manas) and consciousness (viññāna). However, they know that as the wisdom of Tathāgata is infinite, his mind is also infinite.\[499\]

3. Son of Buddha, how can the bodhisattva mahāsattvas know and see the mind of Tathāgata, Arhat and the completely enlightened being? Sons of Buddha, the bodhisattva mahāsattvas know that Tathāgata cannot be defined by mind (citta), thought (manas) and consciousness (viññāna). However, they know that as the wisdom of Tathāgata is infinite, his mind is also infinite.\[499\]

---

\[496\] The presumably earliest Mahāyāna sūtras preserved, the Prajñāpāramitā sūtras emphasised the śūnyatā of Tathāgata. A major shift in the Avatamsaka Sūtra is the development of the soteriological aspect of Tathāgata. This is to say that the Tathāgata appeared in the world in order to liberate all living beings. See Guang 2002: 132–136. For a study of the description of Tathāgata in this sūtra, see Kawanabe 1976. Itō Zui’ei investigates this sūtra in connection with the Daśabhūmika-sūtra. The former sūtra explains the realisation of Tathāgata-jñāna-guṇa from the aspect of fruition, while the latter one teaches the realisation of Tathāgata-jñāna-guṇa from the aspect of bodhisattva deeds as cause. See Itō 1988: 966–987.

\[497\] Buddha said: “Sons of Buddha, how can the bodhisattva enter the [realm of] mental activity of Tathāgata, Arhat and the completely enlightened being? The Tathāgata cannot be a thought of mind, neither a name that is discrimated, and neither a consciousness that [one] can be aware of. Only if [the bodhisattva understands that] Tathāgata has no mind, can he enter [the realm of] infinite thought.”

\[498\] Son of Buddha, how should the bodhisattva mahāsattvas know and see the mind of Tathāgata, Arhat and the completely enlightened being? Sons of Buddha, the bodhisattva mahāsattvas know that Tathāgata cannot be defined by mind (citta), thought (manas) and consciousness (viññāna). However, they know that as the wisdom of Tathāgata is infinite, his mind is also infinite.

\[499\] Fo shuo rulai xingxian jing 佛說如來興顯經, T10, no. 291, p. 605, a1–18.

\[500\] Da fangguang fo huyan jing 大方廣佛華嚴經, T10, no. 279, p. 271, a23–25.
Son of Buddha, how should the bodhisattva mahāsattvas know the minds of Tathāgatas, Arhats and the completely enlightened being? Sons of Buddha, the mind (citta), thought (manas) and consciousness (viññāna) of Tathāgata cannot be grasped, but given his infinite wisdom the mind of Tathāgata should be known.\(^{501}\)

4. 佛子。云何菩萨摩诃萨。知见如来应供等正觉心。此菩萨摩诃萨。知心意识非即如来。但知如来心。 (Kimura 1999: p. 617.)

Son of Buddha, how should the bodhisattva mahāsattvas know and see the mind of Tathāgata, Arhat and the completely enlightened being? Sons of Buddha, the bodhisattva mahāsattvas know that Tathāgata cannot be defined by mind, thought and consciousness. However, they know...

The bodhisattva mahāsattva Wondrous Quality of Being Born in the Family of Tathāgata told bodhisattva mahāsattva Samantabhadra: “Son of Buddha, how should the bodhisattva mahāsattvas know the origination of the mind of Tathāgata, Arhat and the completely enlightened being?” After saying this bodhisattva mahāsattva Samantabhadra told bodhisattva mahāsattva Wondrous Quality of Being Born in the Family of Tathāgata: “Sons of Buddha, the Tathāgatas cannot be established by means of mind, thought or consciousness. The origination of the mind of Tathāgata should be known as the infinite wisdom of Tathāgata.”\(^{503}\)

\(^{501}\) Cleary’s translation: “How should great enlightening beings know the mind of Buddha and truly awake? The mind, intellect, and consciousness of Buddha are ungraspable. One can know the mind of Buddha only in terms of infinity of knowledge.” Cleary 1993: p. 998. Cheng Chien’s translation: “Children of the Buddha, how should all Bodhisattva-mahāsattvas know the mind of the Tathāgata, Arhat, Perfectly Enlightened One? Children of the Buddha, the mind, thought, and consciousness of the Tathāgata are unobtainable (anupalabhya). It should be known that only because wisdom is boundless that one can know the mind of Tathāgata.” See Chien 1993: 97–98. Etō Sukō’s Japanese translation: “佛子よ、諸菩薩摩訶薩は、応に云何か如来応正等覚の心を知るべきや。佛子よ、如来の心意識は倶に不可得なり、但応に智の無量なるを以ての故に、如来の心を知るべきや。” See Etō 1959: 89.

\(^{503}\) Takasaki Jikidō’s Japanese translation of the Tibetan version is as follows: 偉大なる如来性起妙德菩薩は、偉大なる善現菩薩に向かひ、次に之を習得した。「ジナの子よ、菩薩大士は、正しく完全さをとらえた者、真実を掩することを知る如来たちの心の生起を、どのように理解すべきであろうか」かく言われて、偉大なる善現菩薩は、偉大なる如来性起妙德菩薩に向かひ、次のように述べた。「ジナの子よ、如来たちは、心によっても想定されず、意によっても想定されず、認識によっても想定されない。ジナの子よ、如来の心の生起は、無量なる如来の知恵をもって理解すべきである。See Takasaki 1981: 210.
The question here is how the bodhisattvas should understand the mind of Buddha. It is stated in various scriptures that the wisdom or awareness (jñāna) of Buddha does not resemble any kind of mental activity. However, it is also stated that his wisdom is different from the state of cessation of sensation and conceptualisation (samjñāveditanirodha), and belongs to the categories of mind and mental associates (cittacaitta). The only way to resolve this contradiction is to say that his wisdom is different from all other mental activities to such an extent that its being a mental activity can be denied. Thus The Manifestation of the Tathāgata says that Buddha does not have the discriminating mind that can be called citta, manas or vijñāna, but his mental activity, his production of intention (thugs skye-ba, cittotpāda) can be depicted in terms of his infinite wisdom (jñāna). This is a crucial issue as Buddha is described as having appeared in the world with the intention of teaching living beings. However, in accordance with the explanation of the sūtra, this intention cannot be classified as a kind of mental activity, but rather it should be attributed to the infinite wisdom of Buddha.

It is interesting to note that only Dharmarakṣa’s early translation has an equivalence for the Tibetan term thugs skye-ba, which is xinsuo nianxing 心所念行, while in the 60- and 80-fascicle Huayan jing only xin can be found. Moreover, the ambiguity regarding the mental activity of Buddha discussed above seems to haunt in the 80-fascicle Huayan jing when it says, “the mind, thought and consciousness of Tathāgata cannot be grasped” 如來心意識。俱不可得. Is this to say that the mind of Tathāgata cannot be grasped because it does not exist, or because his mind is quite different from the ordinary deluded mind? This question was raised by the Chinese commentator of the 80-fascicle Huayan jing, the renowned fourth patriarch of the Huayan lineage, Chengguan 澄觀 (738–839).

ii. Chinese interpretations

Before turning to Chengguan’s interpretation, first we study how other Huayan masters preceding Chengguan explained this passage. Fazang 法藏 (643–712), the third patriarch,
in his commentary on the 60-fascicle *Huayan jing, Huayan jing tanxuanji* 華嚴經探玄記, explains this passage under the rubric of five teachings. According to the elementary teaching of Mahāyāna, that is the Faxiangzong, the Yogācāra teachings introduced by Xuanzang, the Tathāgata has eight pure consciousnesses, and thus on this level the existence of his mental activity is confirmed. On the level of the final teaching of Mahāyāna this is rejected with the statement that only his wisdom exists. The sudden teaching states that at the level of Buddhahood the great wisdom is inherently identical with the real nature because its illumination is identical with the quiescent nature of all things 佛地大智內同真性, 以照即寂故. The perfect teaching includes the previous three explanations without obstruction, emphasising the identity of principle and wisdom, as well as the identity of the king, i.e. mind and the subordinate, i.e. wisdom.

Fazang commenced to write a commentary on the 80-fascicle *Huayan jing* but was unable to finish it; the task of completing it thus fell to his disciple Huiyuan 慧苑. This work is entitled *Xu Huayan jing lueshu kandingji* 續華嚴經略疏刊定記. Although Huiyuan leaves out the categories of five teachings, he also discusses four different interpretations of the passage. According to the first explanation, neither the mind nor dharmas of the Tathāgata are defiled; the mind and dharmas with which he is endowed are pure. On this undefiled level wisdom is strong and consciousness is weak (zhiqiang shilie 智強識劣). If there were no king, i.e. mind, what would the supported (suoyi 所依), i.e. wisdom rely on? In the second explanation, Buddha is said to have no mind because he does not discriminate. Still, he has a kind of mind (xin zhonglei 心種類), because his mind is the cause of the attained stage of Buddhahood due to “perfuming” (vāsanā). According to the third view, the Tathāgata actually does not have a mind or any mental dharmas, as he possesses only wisdom. The fourth position points out that both the existence and nonexistence of the mind of Buddha are right and wrong in some respects. In terms of the nonexistence of the defiled aspect (ranfen 染分) he has no mind, and in terms of the existence of the pure aspect (jingfen 淨分) he has a mind. However, if we clung to the nonexistence of his mind it would lead to the nonexistence of his
form and voice, and if we clung to the existence of his mind it would lead to the defiled nature of his mind. Huiyuan does not provide an account of sudden teaching, but instead he inserts a new interpretation as the second level. However, the first, third and fourth interpretations correspond to the elementary, final and perfect teachings propounded by Fazang, respectively.

Chengguan is definitely indebted to both Fazang and Huiyuan in his interpretation of the passage. He also explained the text from the aspect of different philosophical views but unlike Fazang he did not apply the system of five teachings but introduced two categories, the Faxiangzong and Faxingzong. The Faxiangzong 法相宗, the lineage of dharma-characteristics (dharma-laksana), refers to the Yogacāra teachings that were brought from India to China by the famous Chinese pilgrim, Xuanzang 玄奘 (600–664). It was Fazang who provided this pejorative name implying that this school is preoccupied with the characteristics of dhammas and is thus a quasi-Hīnayāna school.\footnote{Yoshizu 1983a.} The other category, Faxingzong 法性宗, the lineage of dharma-nature (dharmanatā), is regarded as an invention of Fazang, too, and understood as the Chinese school of Yogacāra.\footnote{For this view, see Lusthaus 2002, 372 and Lai 1986.} In fact, it was not Fazang but Chengguan who invented and construed this term, and it would be difficult to substantiate that it covers only Yogacāra teachings as it includes Madhyamaka elements as well.\footnote{Chengguan found ten differences between Faxingzong and Faxiangzong: 1. one vehicle or three vehicles 一乘三乘; 2. one nature or five natures (i.e. gotras) 一性五性; 3. consciousness only is real or false 唯心真妄; 4. the Tathatā is dependent-arising or is immovable 真如隨緣凝然; 5. the emptiness and existence of three natures are identical or different 三性空有即離; 6. [the number of] living beings and buddhas is not increasing or not decreasing 生佛不增不減; 7. the emptiness and existence of two truths are identical or different 二諦空有即離; 8. the four characteristics are simultaneous or successive 四相一時前後; 9. the subject and the object of enlightenment are identical or different 能所斷證即離; 10. the body of Buddha is conditioned or unconditioned 佛身無為有為. See Da fangguang fo huyan jing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 511, a2–6.}

In addition to introducing these terms, he expanded the scope of the discussion by setting up a polemic framework. His commentary on this passage thus came to be a short essay that is worth studying in its own right. At the first step, he gives an account of Faxiangzong and Faxingzong/Wuxiangzong 無相宗 providing the reason and scriptural evidences with which they prove their theses. Two masters of Faxiangzong state that Buddha in fact has mental activity. The first master argues that the mind and mental associates with which Buddha is endowed are pure, and we know that he must have a mind as wisdom evolves by relying on consciousness. The second master says that eight consciousnesses are found at the level of Buddhahood, but they are associated with four kinds of wisdom; the ālayavijñāna thus does not accumulate karma, the manas does not regard ālayavijñāna as an ego, and the first six consciousnesses do not discriminate objects. In conclusion, Buddha has
the essence of a mind but does not possess its function. In contrast with the opinions of masters of Faxiangzong, the Faxingzong/Wuxiangzong state that Tathāgata does not have a mind as on the level of dharma-kāya only Suchness and the wisdom of Suchness exist.

Next, he interprets the tenets of Faxiangzong and Faxingzong/Wuxiangzong from the aspect of Huayan Buddhism. First, he demonstrates that neither of these two views can be correct as they are in contradiction to the doctrine and text itself. The doctrine referred to is that the dharmas are both existent and nonexistent, a tenet that Chengguan adopted from the Cheng weishi lun. Both lineages are one-sided as they either emphasise existence or nonexistence. In addition, they fail to conform to the text of the sūtra. If the mind of Tathāgata were existent, then why does the sūtra say, “his mind cannot be grasped”? If it were nonexistent why does it say, “given his infinite wisdom the mind of Tathāgata should be known”? Moreover, Chengguan also stresses that it is not valid to say that either both assertions or neither of them is correct. It is important to note here that the reason why these two assertions cannot be merged is that “they are fixed in advocating either the existence or the nonexistence [of the mind of the Tathāgata] (dingwei youwu 定謂有無)”. It is these two fixed positions that Chengguan challenges next.

He shows that these two positions can be merged or harmonised: “existence that is identical with actuality (jizhenzhi you 即真之有) and actuality that is identical with existence (jiyouzhi zhen 即有之真) are two aspects that become complete together (eryi xiangcheng 二義相成). It is the nonobstruction of existence and nonexistence”. He argues that the mind of Tathāgata cannot be described one-sidedly using terms like existence, nonexistence, pure, impure, “one”, various, animate or inanimate. In fact, these are in perfect interfusion without obstruction (yuanrong wuai 圓融無礙). Finally, he arrives at the conclusion that the mind of Tathāgata is both existent and nonexistent. Formerly, he refuted this assertion because of the fixed nature that was attributed to existence and nonexistence by Faxiangzong and Faxingzong. However, after eliminating the sharp lines between these two concepts by the Huayan way of interfusion and penetration, he managed to reconstruct this thesis on a different plane. Nonetheless the stage of fruition has remained ineffable, as Chengguan points out.

The Faxiangzong in Chengguan’s discussion is congruent with the elementary teaching of Mahāyāna in Fazang’s commentary and the first and second views in Huiyuan’s work. The tenets of the first and second masters of the Faxiangzong are identical with the first and second views, respectively. The Faxingzong can be related to the third view and the final teaching. However, the Faxingzong is also called Wuxiangzong, which is none other than the
sudden teaching which Chengguan identified with the *Chan* lineage.\textsuperscript{514} The [Huayan] lineage is the perfect teaching and the fourth view.

iii. Conclusion

The philological study of this short passage sheds light on certain aspects of medieval Chinese Buddhism.

1. As we saw, Indian Buddhist texts are ambiguous about the existence of mental activity in Buddha. Chinese Buddhism is frequently accused of misunderstanding or misinterpreting Indian Buddhist concepts. The sinification of Buddhism thus sometimes has the connotation of altering the “pure model” of Buddhism.\textsuperscript{515} However, an analysis of this passage showed that the ambiguity of Indian texts about the nature of Tathāgata was recognised and carefully investigated by Chinese masters of Buddhist texts. In addition, they attempted to resolve this contradiction by applying the system of *panjiao* 判教, which enabled them to interpret the teachings on different levels. No doubt, for *Huayan* monks the perfect teaching is the *Huayan*, which proclaims the infinite interpenetration of all things, tenets, etc. Apropos of this topic, this means that mental activity in Buddha both exists and does not exist without obstruction.

2. This study of Chinese commentaries reveals the development of the *Huayan* exegetical tradition. Fazang who definitely paved the way for the next generation of *Huayan* exegetes with his authoritative explanations of the scripture wrote the first sentence-by-sentence commentary of the *Huayan jing*. However, on the foundation laid by Fazang,

\textsuperscript{514} While Fazang treated the sudden teaching as the fourth teaching, Chengguan degraded it to the level of third teaching, and identified it with the *Chan* teachings. This shift must be attributed to the growing popularity and influence of *Chan* by the second half of the Tang dynasty against which Chengguan emphasises the importance of doctrinal study. See Yoshizu 1985.

\textsuperscript{515} For a discussion of the term sinification in Buddhist studies, see Sharf 2002: 1–27.
Huiyuan and Chengguan modified the interpretation of the passage. Huiyuan left out the framework of five teachings that played a central role in Fazang’s philosophy, and he simply listed four views in connection with the text of the *sūtra*. Moreover, Chengguan who otherwise sharply criticised Huiyuan for his heretical views, and intended to reestablish the orthodoxy of Fazang, in fact, introduced two new categories, *Faxingzong* and *Faxiangzong*, instead of five teachings for the interpretation of the text.\(^{516}\) One reason for the differences is that they were commenting on different versions of the *Huayan jing*. The other reason could be the different socio-religious backgrounds of these monks. Fazang who enjoyed the generous support of Empress Wu\(^ {517}\) did not wish to compromise with other Buddhist teachings and proclaimed the superior position of the *Huayan* teaching. Although Chengguan was an eminent and highly recognised monk in his day, by the second half of the Tang dynasty it became more important for the Buddhist community to establish unity in the face of waning imperial support. The emphasis in his teaching, therefore, shifted away from the superiority of *Huayan* to its all-inclusiveness.

3. Last but not least, it is important to underline the role of commentary as a genre in Chinese Buddhism. As in other traditional cultures, commentary was held in high esteem in China, and its prevalence cannot be overemphasised.\(^ {518}\) If we examine the *Taishō* edition of the Chinese Buddhist canon we find that eleven and a half volumes (33–44) include the commentaries while the treatises fill only four and a half volumes (44–48). The method of writing a Buddhist commentary evolved through the centuries and reached its apogee during the Tang dynasty.\(^ {519}\) Chengguan’s commentary and subcommentary on the 80-fascicle *Huayan jing* are masterpieces of this genre. They include a very elaborate outline, *kepan* 科判 or *kewen* 科文, which is a Chinese invention in Buddhist exegesis. His commentaries represent not only explanations of the *sūtra* text but also an encyclopedia, or *Summa Theologiae*, of the Buddhist knowledge of medieval China. In what follows, you will find an outline and translation of Chengguan’s commentary and subcommentary on the passage studied in this chapter. To the best of my knowledge, this is the first time that a section of his *Magnum Opus* has been made available in English.\(^ {520}\)

182
SON OF BUDDHA, HOW SHOULD THE BODHISATTVA MAHĀSATTVAS KNOW THE MIND OF TATHĀGATA, ARHAT AND THE COMPLETELY ENLIGHTENED BEING?

SONS OF BUDDHA, THE MIND, THOUGHT AND CONSCIOUSNESS OF TATHĀGATA CANNOT BE GRASPED, BUT GIVEN HIS INFINITE WISDOM THE MIND OF TATHĀGATA SHOULD BE KNOWN.

/1. explanation of the meaning of the text/ “THE MIND, THOUGHT AND CONSCIOUSNESS OF TATHĀGATA CANNOT BE GRASPED” is the negative statement (zhequan 遮詮) from the aspect of essence, and “BUT GIVEN HIS INFINITE WISDOM THE MIND OF TATHĀGATA SHOULD BE KNOWN” is the positive statement (biaoquan 表詮) relying on function.

Subcommentary (hereafter S): The mind is the king, the mind is treated as the essence and thus wisdom is subordinate. Function is clarified from the aspect of the subordinate. Essence cannot be described using positive statements; therefore, only negative statements [can be applied]. Features of function can be clarified; therefore, positive statements are applied. However, function is also referred to using negative statements, as it is identical with essence and is immeasurable. If it were described only using negative statements, it could not manifest its subtlety (miao 妙). Therefore, positive statements are used to discuss the Enigmatic Supreme (xuanji 玄極). Relying means that by relying on the subordinate the king is manifested. By relying on function essence is manifested.

---

521 I am very grateful to Professor Aramaki Noritoshi for his invaluable assistance in understanding this text while I was a visiting researcher at the Ōtani University in 2002. However, I take full responsibility for all the mistakes in the translation. For my translation, I used the edition that contains the sūtra along with Chengguan’s commentary and subcommentary. This edition was organised by Chiang Tsu Chuang 將竹莊 in 1936 in Shanghai, and during this project more than twenty different versions were collated. A reprint edition was made by Nanting 南亭 in Taiwan in 1966: Huayan jing shuchao 華嚴經疏鈔, 10 vols. Xinwenfeng chubanshe, Taipei. Recently, a revised edition of this work, Xinxiu Huayan jing shuchao 新修華嚴經疏鈔, has been undertaken by the Huayan Society 華嚴蓮社 in Taipei under the guidance of Master Chengyi 成一. The chapter Manifestation of the Tathāgata has not been published yet, as only 10 of the scheduled 20 volumes have been released to date; I thus had to rely on the previous edition in my translation. This new edition includes references for all works that Chengguan quotes; therefore, it is a very useful work for those studying Chengguan’s writings. For the relevant parts in the Taishō edition, see Da fangguang fo huyanjing shu 大方廣佛華嚴經疏, T35, no. 1735, p. 878, a10–p. 878, c5; Da fangguang fo huyanjing suishu yanyi 大方廣佛華嚴經隨疏演義, T36, no. 1736, p. 617, c27–p. 619, b18.
Function and mental associates (xinsuo 心所) both have negative implications. In this context we only rely upon their positive [sense] in order to illumine their profundity.

/2. separately expounding varying explanations/  
/2.1. introduction/ There were many explanations of this passage in the past.  
/2.2. other views/  
/2.2.1. two masters of the Faxiang lineage (Faxiangzong 法相宗)/  
/2.2.1.1 the first master/  
/2.2.1.1. thesis (zhengming 正明)/ The first [master] says that there are two kinds of consciousness: defiled and pure. At the level of Buddha, that [kind of] mind and mental associates that is under the sway of impurities (sārśrava, youlou 有漏) [and hence] defiled is absent, but mind and mental associates belonging to the pure [kind] do exist.

Someone may [object] asking: “If it is like that, then the king and the subordinate both exist. Why does the [sūtra] say that as for the king, it CANNOT BE GRASPED?” This is why it is explained that at the stage of fruition the consciousness is weak. This is the reason for saying CANNOT BE GRASPED. As wisdom is strong, it is said to be immeasurable. Consciousness is weak means that it has only pure aspects of the two aspects; it is not identical with that of sentient beings whose discrimination is strong. Wisdom is strong means that there is no being unwise (dausprajña, ehui 惡慧), because determination (viniscaya, jueduan 決斷) is dominant.

/2.2.1.1.3. contraposition (fancheng 反成)/ If there is no king, how can the dependent be established?

522 There are six groups of mental associates: always-active (sarvatraga, bianxing 遍行), specific (vinīyata, biejing 別境), advantageous (kusala, shan 善), mental disturbances (kleśa, fannao 煩惱), secondary mental disturbances (upakleśa, sui fannao 隨煩惱), and indeterminate (aniyata, buding 不定). Altogether, there are 51 mental associates. See Lusthaus 2002: 542–543.  
523 Nakamura 1975: 18b.  
524 The expression fancheng literally means “reverse establishment”. It might be the Chinese translation of the Sanskrit logical term vyatireka, though Nakamura gives the Chinese word yuanti 遠離 for this Sanskrit term. See Nakamura 1975:
Wisdom is a mental associate. Without the mind-king what could wisdom rely on?

/2.2.1.4. scriptural evidence (yinzheng 引證) / That is why the third volume of Cheng weishi lun 成唯識論 cites Rulai gongde zhuangyan jing 如來功德莊嚴經 saying: “The undefiled mind (amala-vijñāna, wugoushi 無垢識) of the Tathāgata is the pure realm without impurities; it is liberated from all obstacles and is associated with the wisdom of the perfect mirror (ādarśa-jñāna, yuanjingzhi 圓鏡智)”526 therefore it is clear that [even in the case of the Buddha] there is the king (i.e. citta exists).

The pure realm without impurities means that impurities are defilement. The undefiled mind means that [the Tathāgata] has consciousness. It is associated with the perfect mirror wisdom makes clear that his mind-king exists and is associated with the subordinate. The subordinate is not established independently. Thus it concludes that it is clear that [even in the case of the Buddha] there is the king (i.e. citta exists).

/2.2.1.5. refutation of objection again (chongtong fangnan 重通妨難) / Transmutation of consciousness (zhuanshi 轉識) means that wisdom evolves by relying on consciousness, but it is not the case that [when attaining Buddhahood] one transmutes the essence of consciousness [into wisdom].

Someone may object saying that as it was said the four kinds of wisdom are completed by the transmutation of eight consciousnesses. 527 It is thus clear that only wisdom exists and consciousness does not exist. This is the reason for explaining here that wisdom evolves by relying on consciousness. Wisdom evolves by relying on consciousness means that consciousness is the ruler (zhū 主), and wisdom is not. Still, [in order to explain why earlier sources like Mahāyānasamgraha express themselves in such a way as if] “consciousness only” were transmuted, we have the opinion of three masters. Here, all of them are referred to. This is one of them. [When it was stated] above that [in the state of Buddhahood] wisdom is strong and consciousness is weak, this is [the opinion of] another master.528

140b. The classical example for vyatireka in Buddhist logic is “wheresoever there is no fire, neither is there smoke”. See Stcherbatsky 1930–1932: vol. 1, 301–303. In our context: if there is no mind, there is no wisdom.

525 This sūtra has not been translated into Chinese. See Kamata 1999: 644.

526 Cheng weishi lun 成唯識論, T31, no. 1585, p. 13, c24; Cook 1999: 82. For other translations of the Cheng weishi lun 成唯識論, see La Vallée Poussin 1928 and Wei 1973.

527 The four kinds of wisdom are acquired by the transmutation of the mental dharmas associated with the eighth, seventh, sixth, and first five consciousnesses, respectively. 此轉有漏八七六五識相應品, 如次而得. Cheng weishi lun 成唯識論, T31, no. 1585, p.56, b2–3. See Cook 1999: 348–349.

528 Chengguan here paraphrases the following passage from the Cheng weishi lun 成唯識論: 智雖非識 而依識轉識為主故說轉識得. 又有漏位智劣識, 而依識轉識為主故說轉識得. Cheng weishi lun 成唯識論, T31, no. 1585, p. 56, b3–4. In
2.2.1.2. The second master

2.2.1.2.1. Thesis As the [Tathāgata] does not have [the mental activity of] accumulating [karma], thinking, etc., his mind is said not to be grasped. His nondiscriminative wisdom manifests in innumerable ways. It is not that it does not have the essence of the mind (心體).

Accumulating [karma] is called the mind; thinking is called thought; discrimination is called consciousness. Now, at the stage of fruition the eighth [consciousness, i.e. ālayavijñāna] manifests [actual cognitions] without accumulating [karmic] seeds. The seventh [consciousness, i.e. manas] does not think the eighth [consciousness] to be an ego. Etc. refers to the first six [consciousnesses] that do not discriminate objects. The reason for this is that all of them are associated with the four kinds of wisdom. Therefore, it is said that they do not exist. However, this is not to say that [the Tathāgata] does not possess the nonaccumulating eighth [consciousness], nonthinking seventh [consciousness], and nondiscriminative six [consciousnesses]. It thus concludes that it is not that it does not have the essence of mind.

2.2.1.2.2. Scriptural evidence Therefore, the eighth fascicle of Mahāyānasamgraha[-upanibandhana] says: “The support of the nondiscriminative wisdom is not mind, because it is not reflection on meaning.”

is not mind, because it is not reflection on meaning clarifies that the eighth [consciousness] does not accumulate, the seventh [consciousness] does not think, etc.

2.2.1.2.3. Refutation of objection (遮救) “Nor is it [the case that it] has non-mind as its support (suoyizhi 所依止), as it is a kind of mind (xinzhonglei 心種 類). The mind is regarded as [its] cause. Through the power of the repeated cultivation [of the mind] the stage [of fruition] is attained by [the Tathāgata]. Therefore it is called a kind of mind.”

Cook’s translation: “Even though knowledge is not consciousness, it nevertheless evolves supported by consciousness. Inasmuch as consciousness is ‘king,’ [knowledge] is said to be acquired by the transmutation of consciousnesses. Also, in an impure state, knowledge is weak and consciousness is strong, while in a pure state knowledge is strong and consciousness is weak.” See Cook 1999: 349.

529 There are four kinds of wisdom: 1. wisdom of the great, perfect mirror (ādārśa-jñāna, yuan jingzhi 圓鏡智) that reflects all forms without discrimination; 2. wisdom of sameness (samatā-jñāna, pingdengxing zhi 平等性智) that treats everything equally; 3. wisdom of wonderful observation (pratyaveksanā-jñāna, miao guancha zhi 妙觀察智), which sees the real nature of everything; 4. wisdom of achieving the task (kṛtya-anusthāna-jñāna, cheng suozuo zhi 成所作智) that benefits living beings with three kinds of deed (mental, verbal, and physical). For a discussion of these terms in Cheng weishi lun 成唯識論, see T31, no. 1585, p. 36, a12–p. 57a12; Cook 1999: 347–353.

530 Here Chengguan quotes from Asvabhāva’s commentary on Mahāyānasamgraha: 論無分別智所依非心, 非思義故. 亦非非心為所依止之種類故以心為因, 教習勢力引得此位, 名心種 類. See She dasheng lun shi 攜大乘論釋, T31, no. 1598, p. 430, a5–8. It comments on the following verse from the Xuanzang’s version of Mahāyānasamgraha: 論菩薩所依非心是無分別智, 非思義種類. See She dasheng lun ben 攜大乘論本, T31, no. 1594, p. 147, c4–5. Paramārtha’s
S: Someone might raise an objection saying that if [the Tathāgata] does not have an aspect of mind, then nondiscriminative wisdom must rely on matter (rūpa, 色). Hence it is shown that the king that is support is not completely without essence. Above this is generally stated (zongbiao 總標) that [the Tathāgata] has [a mind]. Next, starting at it is a kind of mind [the commentary] explains what it means for [the Tathāgata] to have [a mind]. How could it be non-mind if it is said to be a kind of mind? Next from the mind is regarded as [its] cause it explains again [why] his mind is a kind of [mind]. The stage refers to the stage of fruition. This is to say that because the eight pure consciousnesses of the stage of fruition are attained by means of the accumulating mind, etc. as the cause, the [basis of non-conceptual insight of the bodhisattvas] cannot be called a non-mind. It is like the nonindicative form (avijñapti-rūpa, wubiaose 無表色) that is born relying on the indicative form (vijñapti-rūpa, biaose 表色). This is the reason why it is called form. It is on these grounds that the non-accumulating mind, etc. received their names.

/2.2.2. conclusion of the topic above and introduction to a new one (jieqian shenghou 結前生後)/ The two explanations above both clarify that the mind, thought and consciousness of [the Tathāgata] exist.

S: It concludes the two [explanations] by Faxiangzong and introduces one explanation by Faxingzong. Question: What is the difference [between the two explanations by Faxiangzong] if both of them [state that the Tathāgata] has [a mind]? Answer: The former explains that [the Tathāgata] has a pure [mind] but not a defiled one. The latter expounds that [the Tathāgata] has an essence but not a function. Therefore, their meanings are different. Still, two meanings are completed mutually: as [the Tathāgata] does not think, etc. he does not have a defiled [mind]; as he does not have a defiled [mind], he does not have the aspect of accumulation, thinking, etc.

/2.2.3. masters of Wuxiangzong 無相宗 and Faxingzong 法性宗/

/2.2.3.1. thesis/ Buddha in fact does not have a mind, thought or consciousness, nor any dharmas of the mind (citta-dharma, xinfa 心法). [That is why the Sūtra] says CANNOT BE GRASPED. He has only great wisdom; this is why it says GIVEN HIS INFINITE WISDOM THE MIND OF Tathāgata is KNOWN.

rendition: 諸菩薩依止非心非非心是無分別智非思疾類故, T 31, 1593: 128a18–19. “For all bodhisattvas the support is/ Neither thinking nor the absence of thinking:/ For non-imaginative wisdom is not a not-thinking / But is something that rapidly [issues from thinking].” See Keenan 1992: 93–94. Vasubandhu also uses the expression “a kind of mind” in his commentary on the Mahāyānasūtra: 此智所依不名為心, 不思義故, 亦非非心, 心所引故, 此生所依是心種類, 亦名為心因彼而生. She dasheng lun shi攝大乘論釋, T31, no. 1597, p. 364, b1-4.

531 In the English version of La Vallée Poussin’s translation it is “non-informative” and is defined as follows: “This is an action which does not cause anything to be known to another, and in this it resembles mental action; but it is matter (rūpa), in that it resembles bodily and vocal action.” See La Vallée Poussin 1991: 136–137. For a demonstration of nonexistence of indicative and nonindicative forms in Cheng weishi lun成唯識論, see T31, no. 1585, p. 4, c8–p.5, a6. Cook 1999: 27–28.

532 Eight consciousnesses are called dharmas of mind. See Lusthaus 2002: 542.
/2.2.3.2. **scriptural evidence** This is why the Suvarna-prabhāsa-uttama-sūtra and the Paramārtha’s translation of Mahāyānasamgraha[-bhāya] say: “Only Suchness (tathatā, ruru 如如) and the wisdom of Suchness exist alone.”

According to the Buddhabhūmivākhyāna, five dharmas contain the nature of great awakening (dajuexing 大覺性): the one real dharma-dhātu (yizhen fajie 一真法界) and the four kinds of wisdom of enlightenment (sizhi puti 四智菩提).

It does not mention any other dharmas.

The Treatise [Mahāyānasamgraha] says “the body of self-nature means dharma-kāya (fashen 法身)”. It is explained that only Suchness and the wisdom of Suchness exist alone. This is called dharma-kāya.

/3. coalescence of explanations through a return to [the Huayan] lineage
/3.1. errors of one-sidedness
/3.1.1. topic (biao 標) The two lineages discussed above are both one-sided; therefore, they are refuted.
/3.1.1.1 explanation
/3.1.1.1.1. separate refutation (lipo 離破)
/3.1.1.1.1.1. refutation of Faxiangzong
/3.1.1.1.1.1. direct refutation (duopo 奪破)
/3.1.1.1.1.1.1. in contradiction to doctrine (weiyi 違義) If the former [interpretation that the Tathāgata] has a mind is accepted, then [the extreme of] increase (zengyi 增益) is not avoided.

---

The sources state this in connection with dharma-kāya; 惟有如如如智。是名法身, Hebu jin guangming jing 合部金光明經, T16, no. 664, p. 363, a6; 云何知此法依止法身，不離清浄及圓智。即如如如如智故, She Dasheng lun shi 摄大乘論釋, T31, no. 1595, p. 249, c26-28.

The expression duopo literally means “grasping refutation”.

According to the Faxiangzong, there are two erroneous views regarding self and dharmas. One of them is to think that self and dharmas in fact exist. It is called “increase”. The other one is to think that self and dharmas do not exist at all. It is called “decrease”. For the occurrence of this term in the Cheng weishi lun 成唯識論, see T31, no. 1585, p. 1, b13. The Cheng weishi lun 成唯識論 concludes: “These forms are metaphorical constructions based on the transformation of consciousness.” See Cook 1999: 10.
It cannot [complete the definition] of being identical with both existence and emptiness (jiyou jikong 即有即空); therefore, it becomes increase.

/3.1.1.1.1.1.1.2. in contradiction to the text (weiwen 違文)/ Thus it cannot explain the meaning of CANNOT BE GRASPED.

The text says that THE MIND, THOUGHT AND CONSCIOUSNESS OF TATHĀGATA CANNOT BE GRASPED; it does not say that the defiled [MIND, THOUGHT AND CONSCIOUSNESS OF TATHĀGATA] CANNOT BE GRASPED.

/3.1.1.1.1.2. indirect refutation (zongpo 縱破)/ Why does the Sūtra not mention the pure aspect (jingfen 淨分)?

If we suppose that [the Tathāgata] has a pure [mind] but does not have a defiled [mind], why does the sūtra not mention that [his mind] has a pure aspect?

/3.1.1.1.1.3. refutation of objections (zhejiu 遮救)/

/3.1.1.1.1.3.1. first objection/ Is the undefiled consciousness not mentioned [elsewhere]?

We are afraid that somebody could raise an objection saying that pure characteristics (jingxiang 淨相) are difficult to describe; thus it is not elaborated. Now, it is refuted with the question [in this case] why the [Rulai gongde] zhuangyan jing mentioned the consciousness without “impurity” (wuloushi 無漏識).

/3.1.1.1.1.3.2. second objection/ Why does the sūtra not say that the defiled [mind] CANNOT BE GRASPED?

We are afraid that somebody could raise an objection saying that CANNOT BE GRASPED refers to (yizai 意在) the defiled [mind]. It is thus refuted with the question [in this case] why [the sūtra] does not say that the defiled [mind] CANNOT BE GRASPED.

/3.1.1.1.2. refutation of Faxingzong/

/3.1.1.1.2.1 direct refutation/

/3.1.1.1.2.1.1. in contradiction to doctrine/ If the latter interpretation is accepted, then [the extreme of] decrease (sunjian 損滅) is not avoided.

---

538 The expression zongpo literally means “refutation by supposition”, which reveals the wrong consequences of a statement.
Emptiness obstructs existence (空礙有); therefore, it says decrease.

3.1.1.1.2.1.2. in contradiction to the text/ It cannot explain the meaning of THE MIND [OF TATHĀGATA SHOULD] BE KNOWN. [The sūtra] says GIVEN HIS INFINITE WISDOM THE MIND OF TATHĀGATA SHOULD BE KNOWN. It does not say that he does not have a mind that can be known. Thus it is obvious that this is not to say that he does not have a mind.

As it is stated in the text: GIVEN HIS INFINITE WISDOM THE MIND OF TATHĀGATA SHOULD BE KNOWN. It does not say that the wisdom of Tathāgata is to be known. Thus it is clear that relying on wisdom his mind is to be known. Therefore, he has a mind.

3.1.1.1.2.2. indirect refutation/ 3.1.1.1.2.2.1. in contradiction to doctrine/ If we [accept that] he does not have a mind, then how could wisdom be established alone [apart from a mind]?

If we suppose that as you [said] the mind does not exist but wisdom exists, this results in two errors. First, it is in contradiction to doctrine. As the mind-king is the most excellent (最勝), if yet you say that it does not exist, wisdom has nothing to rely on. How can it be established alone? Just like without a monarch (君主) how can there be a subject (臣下)?

3.1.1.1.2.2.2. in contradiction to the text/ This is not only in contradiction to the two texts above, but also to the meaning of the Nirvāṇa-sūtra, which says that in the state of nirvāṇa the impermanent consciousness is extinct, but permanent consciousness (常識) is obtained.

The two texts above refer to the [Cheng] weishi [lun] and the Mahāyānasamgraha. In the state of nirvāṇa the impermanent refers to the five aggregates (skandha, 蕖). The [Mahāparinirvāṇa]-sūtra says, “Kaupidinya, as the impermanent form is extinct, the permanent form is obtained. This holds true for form, feeling, conception, and volition.” As he has a permanent consciousness, he has a mind.

3.1.1.2. joint refutation (合破)/ If we accept both of the two doctrines [of the two lineages], contradiction is not avoided. If we reject both of them, it is better to avoid idle discourse (prapañca, 戏論).

539 The original text is slightly different. 翻時世尊告憍陳如, 色是無常, 因滅是色, 得到解脫常住之色。受想行識亦是無常, 因滅是識, 得到解脫常住之識。See Daban niepan jing 大般涅槃經, T 12, 374: 590c6–8. “At that time the World Honored told Kaupidinya: ‘Form is impermanent. As [in the state of nirvāṇa] this form is extinct, the liberated and permanent form is obtained. This holds true for feeling, conception, volition and consciousness. When this consciousness is extinct, the liberated and permanent consciousness is obtained’.”.
The joint refutation of the two lineages leads to the four denials (apavāda, bang 諗). Here we refute the objection. Someone could ask: “If the two lineages are one-sided, why would it be a mistake to merge them?” This is the reason for saying that contradiction is not avoided. Hence they are fixed in advocating either the existence or the nonexistence [of the mind of the Tathāgata (dingwei youwu 定謂有 無)]. It is not the nonexistence that is identical with existence (jiyouzhi wu 即有之無), and not the existence that is identical with nonexistence (jiwuzhi you 即無之有). [Someone could ask:] “Is it not plausible that both of them are rejected?” We answer that it is better to avoid idle discourse, as [in this case] there would be no right explanation.

/3.2. summary of the correct doctrine (zhengyi 正義)/

/3.2.1. link between the previous and the next parts (zhengqian qihou 徵前起 後)/ If it is like that, what is the right direction?

/3.2.2. two topics in two sections/ Now, we explain this [correct] doctrine. The first [topic] is the coalescence of the above two lineages; the second [topic] is the interpretation of the meaning of the sūtra (xiao jingyi 消經意).

/3.2.3. a different explanation of the two views/

/3.2.3.1. coalescence of the two lineages/

/3.2.3.1.1. Faxingzong/ Now, first [we turn to] the latter lineage which says that “only the wisdom of Tathatā [exists]”. As his mind is identical with actual nature (zhengxing 真性), it says “only Tathatā”. As the function of brightness (zhao yong 照用) is not lost, it says “the wisdom of Tathatā”. How could wisdom exist apart from the mind? Thus “only Tathatā” is not in contradiction to (bu guaiyu 不乖於) the existence [of his mind].

According to Faxingzong, his mind is identical with Tathatā, and his wisdom is the wisdom of Tathatā. [However,] there is no Tathatā apart from the mind; thus it is known that if he has Tathatā, he must have a mind. In addition, function that is identical with essence (jitizhi yong 即體之用) is called the wisdom of Tathatā, and essence that is identical with function (jiyongzhi ti 即用之體) is called Tathatā (zhenu 真如). It is like a bright pearl. The essence of the pearl is the Tathatā, and its brightness is the wisdom of Tathatā. How could Tathatā exist without a mind?

---

540 I.e. 1. denial of existence of the mind of Tathāgata, 2. denial of its nonexistence, 3 denial of both its existence and its nonexistence, 4. denial of neither its existence nor its nonexistence. This is the negative form of the four alternatives (catuṣkoṭi, siju 四句) of Madhyamaka. For the application of them in Chinese Madhyamaka, see Ng 1993: 90–123.
192

/3.2.3.1.2. Faxiangzong/ According to the former lineage, he has a pure mind due to the essence of immaculate Tathatā. His mind is identical with Tathatā. Why would it be wrong [to say] that he has a mind?

According to the Faxiangzong, [the] existence [of his mind] is identical with Tathatā. How could its existence be in contradiction to Tathatā? It is like objects that are identical with voidness. Thus it is not wrong to say that [the Tathāgata] has a mind.

/3.2.3.1.2. together/ From this it is known that existence that is identical with actuality (jizhenzhi you 即真之有) and actuality that is identical with existence (jiyouzhi zhen 即有之真) are two aspects that become complete together (eryi xiangcheng 二義相成). It is the nonobstruction of existence and nonexistence.

Existence that is identical with actuality refers to the Faxiangzong, and actuality that is identical with existence refers to the Faxingzong. If these two [views] are not separated, just then will the actual Buddha-mind that is nonobstructed be complete.

/3.2.3.2. explanation of the sūtra/ /3.2.3.2.1. brief clarification/ Second is the interpretation of the meaning in the sūtra. CANNOT BE GRASPED means that the definition of the mind [of Tathāgata] is profound and enigmatic (shenxuan 深玄). It cannot be described; thus its profundity is revealed through a reliance on negation. BUT DUE TO [INFINITE] WISDOM THE MIND OF TATHĀGATA SHOULD BE KNOWN means that depending on mental associates its profundity can be revealed through a reliance on positive statements.

It [discusses] the two topics of positive and negative statements.

/3.2.3.2.2. scriptural evidence/ That is the reason why the Jin [translation of] the sūtra says: “If somebody knows the immeasurability of the wisdom of Tathāgata, he/she knows the immeasurability of his mind.”

It proves both positive and negative statements. It says he/she knows the immeasurability of his mind; thus [Tathāgata] has a mind. There is no flaw in this.

/3.2.3.2.3. extensive explanation/ /3.2.3.2.3.1. negative statements/

541 This refers to Buddhahadra’s translation in 60 fascicles. See Da fangguang fo huyan jing 大方廣佛華嚴經, T9, no. 278, p. 622, b14.
3.2.3.2.3.1.1. one-sided expressions cannot completely convey its principle (jinli 盡理)

What does [the mind of Tathāgata] is profound and enigmatic mean?

(1) If someone wants to say that it exists, [this is wrong] as it is beyond characteristics (juexiang 絕相) like Tathātā. If someone wants to say that it does not exist, [this is wrong] as its apparitions (youling 幽靈) never cease. If someone wants to say that it is defiled, [this is wrong] as it is devoid of all burdens [of defilements]. If someone wants to say that it is pure [this is wrong] as it has not cut off its evil nature (xing’e 性惡). (3) If someone wants to say that it is “one”, [this is wrong] as there is nothing that it does not include. If someone wants to say that it is varied, [this is wrong] as its one-flavor cannot be distinguished. (4) If someone wants to say that it is animate (youqing 有情), [this is wrong] as it is not different from the nature of forms (sexing 色性). If someone wants to say that it is inanimate (wuqing 無情), [this is wrong] as there is no soul (you 幽) that it does not penetrate.

Here four pairs [of terms] are found: (1) existence or nonexistence, which are the opposite [views] of the two lineages; (2) pure or impure, which are the [views of] Faxiangzong; (3) “one” or varied, which are common [views] of the two lineages; (4) animate or inanimate, which also refer to the two lineages. (1) Phenomena (shi 事) are identical with principle (li 理); therefore, they do not exist. Principle does not lose (shi 失) phenomena; therefore, it is not nonexistent. (2) It is pure from the aspect that it is beyond characteristics, and it is defiled from the aspect that it unites [good and evil] natures. It has not cut off its evil nature means that “good” and “evil” are both the nature of the mind. If it cuts off its evil nature, it cuts off the nature of the mind. [However,] nature cannot be cut off. Moreover, icchantikas (chanti 闡提) have not cut off good nature. Characteristics that are identical with essence (jitizhi xiang 即體之相) can include the one-flavor of essence that is identical with characteristics (jixiangzhi ti 即相之體). (4) Essence that is identical with function (jiyongzhi ti 即用之體) is identical with form, and function that is identical with essence (jitizhi yong 即體之用) penetrates souls. It is not different from the nature of forms

---

542 Youling is the traditional Chinese designation of the spirit of a deceased person.
543 This is a reference to the thesis of evil nature of Tathāgata formulated by Zhiyi 智顗 (538–597), the founder of the Tiantai lineage. Zhiyi makes this conclusion on the basis of the mutual embodiment of ten realms which claims that the realm of the Buddha includes the ten such-likes of evil realms. He stresses that though the Tathāgata has the nature of evil, he does not practice evil. This evil nature enables Buddha to descend into the realm of hell to save beings destined to be reborn there. See Liu 1994: 240–242. For a recent publication on the philosophical implications of the evil nature of the Tathāgata, see Ziporyn 2000. Chengguan is said to have studied under the famous Tiantai master Zhanran. See Hamar 2002a: 38–39.
544 Whether icchantikas (those beings who cut off their roots of goodness) have a Buddha-nature or not has long been debated in Chinese Buddhism. First, it was Daosheng who boldly claimed that they have a Buddha-nature, though Faxian’s translation of Mahāparinirvāṇa-sūtra disproved this. However, later his statement was substantiated by Dharmakṣema’s translation of this sūtra. For Daosheng’s view on Buddha-nature, see Kim 1990: 34–38. When Xuanzang introduced his Yogācāra teaching it again became a subject of fierce debate, as according to Indian Yogācāra icchantikas can never become Buddha. For this teaching and the reaction of those Chinese masters who believed in universal enlightenment, see Gimello 1976: 352–362. It is interesting to note that the founder of the Japanese Tendai school, Saichō (767–822), also debated this question with the Hossō monk Tokuitsu (780?–842?). See Groner 2000: 91–106.
refers to the *Awakening of Faith in Mahāyāna* which says: “It is known that the nature of forms is identical with the nature of wisdom; therefore, it is called the body of wisdom. It is known that the nature of wisdom is identical with the characteristics of forms; therefore, it is called the *dharmakāya* that penetrates all places.” In addition, the chapter entitled *Religious Practice* says: “[enlightening beings] will know all things are the mind’s own nature”. How could the nature of animate and inanimate be different in terms of essence?

3.2.3.1.2. the unification of *xing* and *xiang* is unfathomable! If you want to discuss it, words will miss the point. If you want to think about it, thoughts will not reach it. Because the stage of fruition is ineffable.

3.2.3.1.3. inclusion of *xing* and *xiang* can only be revealed with the interfusion of the doctrines of the two lineages! [From the above statements] we know that the mind of Buddha is both existent and nonexistent, both phenomena and principle, both king and subordinate, both “one” and “many”.

3.2.3.1.4. as they are neither identical nor different, it is difficult to describe

3.2.3.1.4.1. the treatment of the mind-king from the aspect of eight consciousnesses!

In the mind (*xin* 心) there is no thought (*yi* 意), and it is not that there is not. In thought there is no mind, and it is not that there is not.

3.2.3.1.4.2. the treatment of the king and its associate in opposition!

The king does not have a subordinate, and it is not that it does not. The subordinate does not rely on the king, and it is not that it does not.

3.2.3.1.4.3. conclusion for all [doctrines]!

Each [doctrine] is like that. They are in perfect interfusion without obstruction (*yuanrong wuai* 圆融無礙). In this way, all the above doctrines follow one principle, not causing contradiction in the enigmatic purport (*bu shuang xuanzong* 不爽玄宗).

There is no means that they are not identical (*bu ji* 不即), as the two characteristics are different. It is not that there is not means that they are not different (*bu li* 不離), as they do not have

---

545 Chengguan quotes Paramārtha’s version, though it is slightly different. See *Da sheng qixin lun* 大乘起信論, T32, no. 1666, p. 579, c14–c16. For Śiksānanda’s version, see *Da sheng qixin lun* 大乘起信論, T32, no. 1667, p. 588, a13–a15. Hakeda’s translation: “Since the essential nature of corporeal form is identical with wisdom, the essence of corporeal form which has yet to be divided into tangible forms is called the ‘wisdom-body’. Since the essential nature of wisdom is identical with corporeal form, [the essence of corporeal form which has yet to be divided into tangible forms] is called Dharmakaya pervading everywhere.” See Hakeda 1967: 72.

546 This passage is found in the sixteenth chapter of the 80-fascicle *Huayan jing*. See *Da fangguang fo huyan jing* 大方廣佛華嚴經, T10, no. 279, p. 89, a2–3. For the English translation, see Cleary 1993: 403.
two essences. In addition, there is no means that they do not have two essences, and completely contain each other (互攝盡). It is not that there is not means [the individual characteristics] of the two are not destroyed, and their effects and function penetrate [each other] (力用交徹).

3.2.3.2. explanation of profundity using positive statements/ Its profundity can be revealed through a reliance on positive statements means that the mind [of Tathāgata] cannot be known by wisdom, but can be praised through a reliance on wisdom, as wisdom is an associate of the mind. Moreover, [the Sūtra] elucidates its enigmatic [feature] with ten metaphors. The mind which is a support enigmatic and enigmatic again (玄又玄). That is the reason why at the end of all the ten metaphors it concludes that it is a characteristic of the mind.

3.2.4. a humble conclusion/ If even Buddha did not speak about it, how would an ordinary person dare to think that he is endowed with the appropriate conditions? Thus relying on the principles of teachings I showed the enigmatic purport. I hope I did not make the mistake of being too complicated.

If even Buddha did not speak about it means that the Sūtra says: THE MIND, THOUGHT AND CONSCIOUSNESS OF [TATHĀGATA] CANNOT BE GRASPED. This is to say that it cannot be described. Śākyamuni shut himself in a room of Magadha [for meditation]. Vimalakīrti closed his mouth in Vaiśāli. In all cases Buddha did not speak about it. The ocean of fruition is ineffable. It is associated only with enlightenment (唯證相應); thus it cannot be spoken about. The appropriate conditions are the conditions of the four siddhāntas (四悉檀) when the speech of that which cannot be spoken about (無說之說) is received.

---

547 Here Chengguan refers to the ten metaphors that the sūtra discusses after the passage now being studied.
548 The expression "enigmatic and enigmatic again" is adopted from the first chapter of the Daode jing.
549 This refers to the 21 days after Buddha became enlightened while he did not teach but was absorbed in deep meditation. See Nakamura 1975: 111.
549 In the Vimalakīrti-nirdeśa-sūtra Mañjuśrī asks Vimalakīrti to express his understanding on the nonduality of dharmas, but he remains silent. See Weimojie suo shuo jing, T14, no. 475, p. 551, c23–24; Luk 1972: 100. For the translation of the Tibetan version, see Lamotte 1962: 318 and Thurman 1976: 77.
551 Siddhānta is point of view or method of teaching. The four siddhāntas are: the worldly point of view (laukika siddhānta, shijie xitan 世界悉檀), the individual point of view (prātipauruṣika siddhānta, gege weiren xitan 各各為人悉檀), the therapeutic point of view (prātipāksika siddhānta, duizhi xitan 對治悉檀), the supreme point of view (pāramārthika siddhānta, diyi yi xitan 第一義悉檀). See Swanson 1989: 23–30.
4. Huayan synthesis of Yogācāra and Tathāgatagarbha

a. Ten Levels of Consciousness-only in Huayan Buddhism

i. The original concept propounded by Fazang

It was Fazang’s innovation to formulate the ten levels of consciousness-only, however, he was indebted to Xuanzang’s disciple, Kuiji 窺基 (632-682) who, based on his understanding of Cheng weishi lun, advocated the five levels of consciousness-only. These are:

1. consciousness-only of rejecting nonexistence and retaining reality (qianxu cunshi shi 遗虚存实识),
2. consciousness-only of abandoning the overflowing and keeping the purity (shelan liuchun shi 捨滥留纯识),
3. consciousness-only of the return of branch to root (shemo guiben 撄末歸本識),
4. consciousness-only of concealing the inferior and revealing the superior (yinlüe xiansheng 隱劣顯勝識),
5. consciousness-only of rejecting the characteristics and realizing the nature (qianxiang zhengxing shi 遗相證性識).

These five levels represent more and more profound understanding of the teaching of consciousness-only. At the beginning level, one must understand that there are no external objects apart from consciousness. Next, after the rejection of external objects, objects are described as internal objects in order to encourage living beings to contemplate on mind to attain liberation. Here, Kuiji cites the ‘the three realms are mind-only’ from the Buddhāvatāṃsaka-sūtra. At the third step, one realizes that the subject and object of perception rely on consciousness, thus internal objects are also excluded, and the existence of consciousness is underlined. Next, one must see that mental associates are inferior to consciousness, while at the final level one realizes the real nature of the mind.

---

552 Kuiji explains this in the section, The forest of definition of consciousness-only (weiši yilin 唯識義林) in his work, Dasheng fayuan yilin zhang 大乘法苑義林章. See T45, no. 1861, 258, b21- 260, b10.
As the teaching of the *Buddhāvataṃsaka-sūtra* was degraded to the second level, Fazang, probably, was not satisfied with Kuiji’s scheme, and felt prompted to put forward his own interpretation of the levels of Yogācāra. His presentation, which arranges the various views from the perspective of Huayan Buddhism, is as follows:553

1. the proposition of consciousness-only in respect of existence of both object and subject of perception (*xiǎngjiān jùcún gu shuò wēishi* 相見俱存故說唯識),
2. the proposition of consciousness-only in respect of return of the object of perception to the subject of perception (*shéxiāng guījiàn gu shuò wēishi* 收相歸見故說唯識),
3. the proposition of consciousness-only in respect of return of the mind associates to the mind (*shèshū guīwáng gu shuò wēishi* 收數歸王故說唯識),
4. the proposition of consciousness-only in respect of return of the branches to the root (*yì mò guīběn gu shuò wēishi* 以末歸本故說唯識),
5. the proposition of consciousness-only in respect of return of the characteristics to [Buddha-]nature (*shéxiāng guīxìng gu shuò wēishi* 收相歸性故說唯識),
6. the proposition of consciousness-only in respect of establishment of phenomena through transformation of the Absolute (*zhuǎnzhēn chéngshì gu shuò wēishi* 轉真成事故說唯識),
7. the proposition of consciousness-only in respect of perfect interfusion of principle and phenomena (*lìshì jùróng gu shuò wēishi* 理事俱融故說唯識),
8. the proposition of consciousness-only in respect of mutual inclusion of phenomena (*róngshī xiāngrù gu shuò wēishi* 融事相入故說唯識),
9. the proposition of consciousness-only in respect of mutual identity of all phenomena (*quánshī xiāngjì gu shuò wēishi* 全事相即故說唯識),
10. The proposition of consciousness-only in respect of non-obstruction of Indra’s net (*diwāng wùwèi gu shuò wēishi* 帝網無礙故說唯識).

The first level admits the existence of the object and the subject of perception, however, objects are not external objects outside the consciousness, but they evolve out of consciousness, and are only images resembling objects. The division of perception into two parts, or aspects was suggested by Nanda, a Yogācāra master of Northern India in the sixth century. In addition to the subject, seeing part (*dārśana-bhāga*, *jianfen* 見分), and the object, seen part (*nimitta-bhāga*, *xiāngfen* 相分), a third part, the self-authenticating part (*svaṃvitti-bhāga*, *zìzhèng fēn* 自證分), was added by Dignāga, and a fourth part that authenticates the self-authentication (*svaṃvitti-saṃvitti-bhāga*, *zhèng zìzhèng fēn* 證自證分).

553 For a detailed explanation of Fazang’s text, see Nakamura 1991.
was added by Dharmapāla.\textsuperscript{554} Here, Fazang does not refer to the division into three or four parts. He writes:

1. The proposition of consciousness-only in respect of existence of both the subject of perception and the object of perception means that [consciousness-only] includes the eight consciousness, the mental associates and objects of perception evolved [out of consciousness] as original forms (bimba, benzhi 本質) and reflections (pratibimba, yingxiang 影像) completely. Due to the perfuming (vāsanā, xunxi 薰習) power of the members of existence, etc. the direct, the circumstantial and other retributions are manifested in the three realms. It is discussed extensively, for example, in Mahāyānasāṃgraha,\textsuperscript{555} Vijñaptimātrasiddhi-śāstra\textsuperscript{556} and other treatises.\textsuperscript{557}

Fazang divides the objects into two parts, the original forms and the reflections. The original form is the seed of a resembling object in the ālayavijñāna, and the reflection, the resembling object relies on this original form. Chengguan explains this level of Yogācāra that both mind and mental associates can be divided into a seeing part and a seen part, and the seeing part is the essential (dangti 當體). He concludes that this level represents the correct definition (zhengyi 正義) of consciousness-only.\textsuperscript{558}

This first position of Yogācāra is deconstructed on the second level, as it is shown that the objects, or, more precisely, the images resembling objects cannot be separated from mind. In other words, the existence of the seen part must be attributed to the seeing part. Fazang writes:

2. The proposition of consciousness-only in respect of return of the objects of perception to the subject of perception means that [consciousness-only] includes the mind and mental associates, but the objects of perception evolved out of consciousness are not born from different seeds.\textsuperscript{559} When subjectively viewing mind is born, it brings about the arising of reflections. It is explained completely in the Samdhinirmocana-sūtra,\textsuperscript{560} Vinśatikā\textsuperscript{561} and Ālambana parikṣa\textsuperscript{562,563}

\textsuperscript{560} T16, no. 675, no. 676
The third level is the deconstruction of the previous stage, revealing that not only objects rely on mind, but also mental associates, and consequently, consciousness-only includes only mind. Fifty one out of the one hundred dharmas of Yogācāra are regarded mental associates. There are six groups of mental associates: always-active (sarvatraga, bianxing 遍行), specific (viniyata, biejing 別境), advantageous (kuśala, shan 善), mental disturbances (kleśa, fannao 煩惱), secondary mental disturbances (upakleśa, sui fannao 隨煩惱), and indeterminate (aniyata, buding 不定). Fazang argues that all of them are dependent on the eight consciousnesses:

3. The proposition of consciousness-only in respect of return of the mental associates to the mind means that consciousness-only includes the eight consciousnesses. As the mental associates rely on consciousness, they do not have self-essence. They are also manifested by mind. It is discussed in Mahāyāna-sūtrāmaṇḍana.  

As all the seeds are contained in the ālayavijñāna, and all the seven consciousnesses evolve out of it, with further deconstruction we arrive at the root-consciousness, the ālayavijñāna. Fazang says:

4. The proposition of consciousness-only in respect of return of the branches to the root means that the seven evolving consciousnesses are the different function of root-consciousness, as they do not have distinct essence. The Laṅkāvatāra-sūtra says: “The ocean of storehouse-consciousness is ever abiding, but the wind of objects is moving, causing the various waves of consciousness

---

561 T31, no. 1590.  
562 This is Dignāga’s work, see T31, no. 1624.  
565 T31, no. 1604.  
The next stage is the last step in the process of deconstruction, when even ālayavijñāna dissolves, as, finally, it turns out not to have self-essence either, since it is the manifestation of Buddha-nature, or tathāgatagarbha. Here, we find the position of the old Yogācāra school in China, which advocates the purity of the final reality. Fazang explains:

5. The proposition of consciousness-only in respect of return of the characteristics to [Buddha-nature] means that the eight consciousnesses do not have self-essence, they are only equally manifested by the tathāgatagarbha, and all other characteristics extinguish. The [Vimalakīrti]-sūtra says: “all living beings are endowed with the features of nirvāṇa, they do not extinguish [the affictions] more.” 570 The Laṅkāvatāra-sūtra says: “the eight [consciousnesses] have the indestructible feature, it has no features, thus they also do not have features.” 571 Similar texts that can become proofs are not only one. 572

Fazang cites from the Laṅkāvatāra-sūtra, but, originally, this stanza referred to the relationship between the seven consciousnesses and the ālayavijñāna. The whole stanza in Suzuki’s translation: “The Citta, Manas, and Vijñānas are discriminated as regards their form;
[but in substance] the eight are not to be separated one from another, for there is neither qualified nor qualifying.”

As the eight consciousnesses rely on tathāgatagarbha, they do not have their own self-essence, thus they do not have characteristics just like the tathāgatagarbha. Fazang also understood this stanza this way, thus this could serve as canonical proof for his statement.

The sixth level starts a new process in establishing Yogācāra views that is the reconstruction of perception. After finding the final source, Fazang emphasizes that this source is not like the tathatā described by the new Yogācāra school. In contrast to the new school which propounds that tathatā is not touched by the world of phenomena, Fazang teaches that tathāgatagarbha plays an active role in establishing the realm of perception, the world of phenomena. He refers to those scriptures that reveal the Tathāgatagarbha teachings. He explains:

6. The proposition of consciousness-only in respect of establishment of phenomena through the transformation of the Absolute means that the tathāgatagarbha does not preserve its self-nature, but in accordance with conditions it manifests the eight consciousnesses, the mind, the mind associates, the objects of perception and various appearances. Thus the Luṅkāvatāra-sūtra says: “The tathāgatagarbha, due to the perfumation (vāsanā) of bad habits, is called storehouse-consciousness.”

The Ghanavyūha-sūtra says: “The Buddha said that 'the tathāgatagarbha becomes ālayavijñāna.' The impaired intelligence is unable to know that the tathāgatagarbha becomes ālayavijñāna.” It also says: “the pure garbha of the Tathāgata and the worldly ālayavijñāna are like the ring made of gold, they are mutually not different. In addition, the Śrīmālā-sūtra, the Ratnagotravibhāga-mahāyānottaratantra-śāstra, and the Awakening of Faith all teach this doctrine. There is not only one proof for that.

577 Dasheng miyan jing 大乘密嚴經, T16, no. 681, p. 747, a17; Dasheng miyan jing 大乘密嚴經, T16, no. 682, p. 776, a13.
578 Dasheng miyan jing 大乘密嚴經, T16, no. 681, p. 747, a19; Dasheng miyan jing 大乘密嚴經, T16, no. 682, p. 776, a15-16.
The next stage paves the way for the final Huayan view in that it applies the Huayan paradigm of principle and phenomena, and attempts to describe the relationship between the Absolute, the origin of phenomenal world and the phenomenal world. Fazang says:

7. The proposition of consciousness-only in respect of perfect interfusion of principle and phenomena means that the *tathāgatagarbha* with its whole essence in accordance with conditions accomplishes all phenomena, but its self-nature originally is not born, and does not annihilate. The principle and phenomena interfuse and are not obstructed, thus one-mind and the two truths are not obstructed. The *Awakening of Faith* says: “Relying on one-mind, there are two gates, the first is the gate of Absolute, the second is the gate of *samsāra*. These two gates comprise all dharmas.” 580 The *Śrīmālā-sūtra* says: “The mind, which is pure by its self-nature, is not tainted, and tainted. It is difficult to understand. It is tainted and not tainted. It is also difficult to understand.” 581 The explanation is as follows. ’It is not tainted and tainted’ clarifies that the pure [Buddha]-nature in accordance with the tainted [conditions] with its whole essence accomplishes the ordinary world. This is the gate of *samsāra*. ’It is tainted and not tainted’ elucidates that the tainted [conditions] are eternally pure, originally identical with the Absolute truth. This is the gate of Absolute. This explains that [on one hand] the tainted, which is identical with the pure, does not obstruct the Absolute, but it is eternally ordinary, and [on the other hand] the pure, which is identical with the tainted, does not destroy the ordinary, but it is eternally Absolute. Thus the one-mind is not obstructed to have two truths. In order to understand its meaning you must deeply contemplate on it. [The Perfection of Wisdom] Sūtra [for Humane Kings Protecting Their Countries] says: “in terms of truth they are two, in terms of liberation they are one.” 582 The [Mahāyāna-saṃgrahāpanibandhana] treatise says: The cognitive hindrances [cause] extreme blindness, which is the attachment to the discrimination of Absolute and ordinary.” 583 584

七理事俱融故說唯識。謂如來藏體隨緣成辨諸事。而其自性本不生滅。即此理事混融無礙。是故一心二諦皆無障礙。起信論云。依一心法有二種門。一心真如門。二心生滅門。然此二門皆各總攝一切法。勝鬘經云。自性清淨心。不染而染。雖可了知。染而不染。亦難可了知。解云。不染而染。明性清淨隨染舉體成俗。即生滅門也。染而不染。門即生滅淨本來真諦。即真如門也。此明即淨之染不礙真而恒俗。即染之淨不破俗而恒真。是故不礙一心雙存二諦。此中有味深思當見。經云於諦常自二。於解常自一。論云智障極盲闇。謂真俗別執。皆此義也。

The last three levels of Yogācāra, in fact, are the description of the Huayan insight into the realm of reality. The first aspect of this truth is the mutual inclusion of phenomena, which is the mutual interpenetration of all phenomena. Fazang writes:

8. The proposition of consciousness-only in respect of mutual inclusion of phenomena means that because the nature of principle is interpenetrated and unobstructed, and the principle accomplishes phenomena, thus phenomena are also interpenetrated, and are mutually not obstructed. Either ‘one’ can penetrate into ‘all’, [or] ‘all’ can penetrate into ‘one’, there is no any obstruction. The text of [the Buddhāvatamsaka-sūtra] says: “In one [thing] he can understand immeasurable [things], in immeasurable [things] he can understand one [thing].”585 The Vairocana Buddha chapter says: “In this ocean of Lotus-womb world every tiny particle includes the whole dharma-dhātu.”586 This chapter later says: “In every tiny particle it is manifested that all the three evil destinies, gods, humans, and asuras receive karmic retribution.”587 There are many similar passages in the [Avatamsaka]-sūtra.588

As all phenomena rely on the Absolute in their existence, Huayan teaches the mutual identity of all phenomena, which is often described in the Buddhāvatamsaka-sūtra. Fazang says:

585 Da fangguang fo huayan jing 大方廣佛華嚴經, T09, no. 278, p. 423, a1; Da fangguang fo huayan jing 大方廣佛華嚴經, T10, no. 279, p. 63, a1.
586 Da fangguang fo huayan jing 大方廣佛華嚴經, T09, no. 278, p. 412, c7-8.
587 Da fangguang fo huayan jing 大方廣佛華嚴經, T09, no. 278, p. 564, a20-21
588 Huayan jing tanxuan ji 華嚴經探玄記, T35, no. 1733: p. 347, b11-18
9. The proposition of consciousness-only in respect of mutual identity of all phenomena means that there is no differentiation among phenomena, which rely on principle. Principle has no differentiation of ‘this’ and ‘that’. It makes one phenomenon identical with all phenomena. The [Avatamsaka]-śūtra says: “If you know one world, you know all the worlds.”

It also says: “He knows that ‘one’ is identical with ‘many’, and ‘many’ is identical with ‘one’, etc.” It is often taught in the sūtra.

九全事相即故說唯識。謂依理事事事無別事。理既無此彼之異。令事亦一即一切。上經云知一世界即是一切世界。知一切世界即是一世界。又云知一即多多即一等。廣如經文說。

The tenth level is the most profound truth of Huayan Buddhism, which is the endless mutual interpenetration of all phenomena. This is described with the metaphor of Indra’s net in Huayan literature. Fazang writes:

10. The proposition of consciousness-only in respect of non-obstruction of Indra’s net means that ‘one’ includes the ‘all’, and that ‘all’ again includes the ‘all’. Thus in one gate it is repeated like that uninterruptedly. Every gate is like that. If you contemplate accurately, you can understand. The reason [the jewels] in Indra’s net repeatedly reflect one another is that the dharma-nature of mind, consciousness and tathāgatagarbha are in perfect interfusion, and this causes all phenomena to be unobstructed like this. It is often taught in the sūtra.

十帝網無礙故說唯識。謂一中有一切。彼一切中復有一切。既一門中如是重重不可窮盡。餘一一門皆各如是。思準可知。如因陀羅網重重影現。皆是心識如來藏法性圓融故。令彼事相如是無礙。廣如上下文說。

Finally, Fazang explains the ten levels in terms of his well-known panjiao system, the five teachings. The first of the five teachings, the Hīnayāna, of course, cannot be found here, as consciousness-only is a teaching of Mahāyāna. The first three levels belong to the elementary teaching of Mahāyāna, which is the Faxiang school and the Madhyamaka, the next four levels belong to the advanced and sudden teachings of Mahāyāna, and the last three

---

589 It is not cited precisely. The sūtra says: 知一世界即是無量無邊世界，知無量無邊世界即是一世界. See Da fangguang fo huayan jing 大方廣佛華嚴經, T09, no. 278, p. 450, c17-19; 知一切世界入一世界；知一切世界入一切世界. See Da fangguang fo huayan jing 大方廣佛華嚴經, T10, no. 279, p. 299, a14-15.

590 Da fangguang fo huayan jing 大方廣佛華嚴經, T09, no. 278, p. 446, a5.

levels represent the perfect teaching, the teaching of the *Buddhāvatamsaka*-sūtra. These are the distinct teaching of the Mahāyāna, while all ten gates belong to the common teaching. Fazang writes:

These ten gates [reveal] the principle of consciousness-only. The first three gates are the doctrines of the elementary teaching of Mahāyāna. The next four gates are the doctrines of final teaching of Mahāyāna and sudden teaching. The last three gates are the doctrines of distinct teaching of perfect teaching. All the ten gates belong to the common teaching. The explanation above is applied in the whole *Avatamsaka*-sūtra, is not limited to this [sixth] level [of the *Daśabhūmika*]. In addition, it is explained in terms of teachings, if we [explain] in terms of meditation and practice, there are also ten gates, just like in the first fascicle of the *Avatamsaka*-sūtra.\(^{593}\)

上來十門唯識道理。於中初三門約初教說。次四門約終教頓教說。後三門約圓教中別教說。總具十門約同教說。上來所明通一部經非局此地。又是約教就解而說。若就觀行亦有十重。如一卷華嚴三昧中說。

It is important to note that in terms of dependent arising, the first four levels describe the dependent arising of ālayavijñāna, the next three levels show the dependent arising of tathāgatagarbha, and the final three levels are the revelation of the dependent arising of dharma-dhātu, the central concept of Huayan Buddhism. Consequently, the fourth level, the return of seven consciousnesses to the ālayavijñāna should belong to the elementary teaching of Mahāyāna, however, Fazang classifies it as the final teaching of Mahāyāna.\(^{594}\)

At the end Fazang concludes that the discussion above elucidated the ten levels of consciousness-only from the perspective of teaching, theoretical knowledge. However, it can be treated from the perspective of meditation and practice, which also include ten gates. Here, he refers to a work, *The Huayan samādhi* in one fascicle as a source for this elaboration. Which work does he refer to? He probably refers to the work *The treatise on Huayan samādhi (Huayan sanmei zhang 華嚴三昧章)*, which was lost in China, but was discovered in Japan. It turned out to be identical with another work, *The treatise on Huayan vow of bodhicitta (Huayan fa putixin zhang 華嚴發菩提心章)*.\(^{595}\) Kamata Shigeo proposes that the section, *Meditation on the ten gates of the chapter of form and emptiness (sekong zhang shimen*
If we attempt to reconstruct how Huayan meditation could be practiced in the light of Fazang’s discussion of the ten levels of consciousness-only, we can surmise that it had two aspects, a deconstruction and a reconstruction. First, the practitioner deconstructs the ordinary way of perception, thus he/she reaches from the distinction of subject and object to the pure tathāgatagarbha. Second, he/she has to reconstruct his/her perception based on the tathāgatagarbha as the final reality which originates all phenomenal existence. Finally, he/she will realize the Huayan perception of the world, the endless interpenetration of all phenomena.

Here is the guideline for this practice based on the previous discussion:

A. Deconstruction

1. mind - mental associates, objects
2. mind – mental associates
3. mind
4. ālayavijñāna
5. tathāgatagarbha

B. Reconstruction

6. creative tathāgatagarbha
7. non-obstruction of tathāgatagarbha
8. non-obstruction of phenomena
9. identity of phenomena
10. Indra’s net

ii. Chengguan’s modification

Chengguan, the fourth patriarch of the Huayan school, explaining the meaning of the “three realms are only mind” in his commentary to the Buddhāvatamsaka-sūtra, puts forward his set of the ten levels of Yogācāra.

---

596 *Huayan fa putixin zhang* 華嚴發菩提心章, T45, no. 1878, p. 654, a29- 655, c24. Kamata 1965: 519-520.
597 *Da fangguang fo huayan jing shu* 大方廣佛華嚴經疏, T35, no. 1735; p. 806, b28-p. 807, a10.
1. the proposition of nonreal one-mind (jiashuo yixin 假說一心)
2. the proposition of one-mind in respect of existence of both object and subject of perception (xiangjian jucun gu shuo yixin 相見俱存故說一心),
3. the proposition of one-mind in respect of return of the object of perception to the subject of perception (shexiang guijian gu shuo yixin 撮相歸見故說一心),
4. the proposition of one-mind in respect of return of the mind associates to the mind (sheshu guiwang gu shuo yixin 撮數歸王故說一心),
5. the proposition of one-mind in respect of return of the branches to the root (yi mo guiben gu shuo yixin 以末歸本故說一心),
6. the proposition of one-mind in respect of return of the forms to [Buddha-]nature (shexiang guixing gu shuo yixin 撮相歸性故說一心),
7. the proposition of one-mind in respect of interfusion of nature and characteristics (xingxiang jurong gu shuo yixin 性相俱融故說一心),
8. the proposition of one-mind in respect of mutual inclusion of phenomena (rongshi xiangru gu shuo yixin 融事相入故說一心),
9. the proposition of one-mind in respect of mutual identity of all phenomena (quanshi xiangji gu shuo yixin 全事相即故說一心),
10. the proposition of one-mind in respect of non-obstruction of Indra’s net (diwang wuai gu shuo yixin 帝網無礙故說一心).

Two changes are very obvious at the first sight. First, instead of consciousness-only he applies the term 'one-mind' for Yogācāra. This is the one-mind of Awakening of Faith, which has the absolute and phenomenal aspects, and, of course, reflects the Sinitic understanding of Yogācāra philosophy. This way Chengguan underlined the main doctrine that lies at the kernel of the ten levels of Yogācāra, which paves the way for the Huayan interpretation of reality. Second, the first level of Yogācāra, the nonreal one-mind is actually not the Yogācāra school, but the Hīnayāna teaching. Chengguan very tersely describes the first level:
It says that actually external dharma exist, but they are moved by the mind. The next nine gates actually [teach] only one-mind.\(^{598}\)

謂實有外法但由心變動故。下之九門實唯一心。  

The meaning of “moved by mind” is rather obscure, but it may refer to the fact that the perception of the external objects is influenced by the mind, that is a proposition of a kind of subjectivity.

The next five levels of one-mind are completely identical with Fazang’s levels of consciousness-only from the first to the five, Chengguan repeats Fazang’s definitions almost word by word. However, the seventh level of one-mind which should correspond to the sixth level of consciousness-only is different. Chengguan excludes the category ‘establishment of phenomena through the transformation of Absolute,’ and he calls the seventh level ‘interfusion of nature and characteristics’. The definition of this seventh level, is identical with Fazang’s seventh level, although there it is called ‘interfusion of principle and phenomena.’ The remaining three levels correspond to Fazang’s system.

Why did Chengguan introduce these alterations? The Japanese Kegon monk, Gyōnen 凝然 (1240-1321), who studied the ten levels of consciousness-only and wrote several works on this topic, concludes that Chengguan wanted to interpret the ten levels of consciousness-only in terms of the four dhara\-\dhātu (dharma\-dhātu of phenomena, dharma\-dhātu of principle, dharma\-dhātu of nonobstruction of principle and phenomena and dharma\-dhātu of nonobstruction of phenomena),\(^{599}\) which was his contribution to Huayan philosophy.\(^{600}\) It seems possible, however, Chengguan never explicitly correlated the four dharma\-dhātus with the ten levels of one-mind in his works.

The reason why Chengguan included Hinayāna teachings could be traced back to a very essential feature of his philosophy that is its all-inclusiveness. Even if, of course, he maintained the superiority of Huayan thought, he was willing to accept all Buddhist teachings within his system of doctrines. As I showed elsewhere, the main difference between Fazang and Chengguan is their attitude toward Xuanzang’s imported teachings.\(^{601}\) While Fazang was very hostile toward Xuanzang’s school, Chengguan tried to harmonize the old and new

\(^{598}\)Da fangguang fo huyanjing shu 大方廣佛華嚴經疏, T35, no. 1735: p. 806, b28-29.

\(^{600}\)Gyōnen studied the ten levels of one-mind, and wrote several works on this topic. See Jin1989a,b; Muramaki 1995: 41-47.  
\(^{601}\)Hamar 2009.
schools of Yogācāra. This harmonization is realized while discussing the levels of Yogācāra, as Chengguan emphasized the ‘interfusion of nature and characteristics’ at the seventh level, which is the focus of the ten levels. For Fazang the central concept was the sixth level, ‘the establishment of phenomena through the transformation of Absolute.’ Fazang’s primary concern was to show the interrelated existence of phenomena, which is described in Huayan as the dependent arising of the dharma-dhātu. The interrelatedness could be claimed on the premise that all phenomena originate from the same source, i.e. the Absolute. Chengguan, in contrast, was much more concerned to show that all phenomena, all characteristics can be traced back to a pure entity, tahāgatagarbha/Buddha-nature/one-mind. On the seventh level, instead of using categories of principle and phenomena, he had recourse to terms, nature and characteristics, emphasizing the harmonious interfusion of Faxingzong and Faxiangzong, which include all conflicting views. This interfusion lays the ground for the Huayan interpretation of interrelated existence.

We saw above that Fazang related the ten levels of consciousness-only to the five teachings. Chengguan applied different headings for this purpose, he called the first level Hīnayāna, he used the term ‘provisional teaching’ for the next three levels, and the term ‘actual teaching’ for the next four levels. Similarly to Fazang, he regarded the Huayan teaching, the last three levels, as the perfect teaching.

iii. Zongmi’s modification

Chengguan’s disciple, Zongmi, who is regarded as the fifth patriarch, is at the same time, the patriarch of the Heze Shenhui Chan lineage. The main agenda of his teaching is the harmonization of doctrine and meditation (jiaochan yizhi 教禪一致). In his philosophy he is greatly indebted to his Huayan master, but he modified the classical, or orthodox Huayan doctrines formulated by Fazang and Chengguan in many ways. First of all, he dropped Fazang’s five teachings, and included the non-Buddhist teachings in his classification of teachings, and did not call the highest teaching as perfect teaching. He calls it the teaching that reveals the nature. Following Chengguan, he also emphasized the origin of all phenomena in order to lay the ground for Buddhist practice. In his interpretation of the ten

---

602 Jin1989b.
603 Sometimes Faxingzong is regarded as the Chinese Yogācāra, while Faxiangzong as Xuanzang’s school. In fact the meaning of Faxingzong is more complicated. See Hamar 2007.
levels of one-mind he also underlines the source of all phenomena, the pure, absolute, one-
mind.

Instead of dividing the one-mind into ten aspects, he first divides it into five aspects
according to five teachings. Following Chengguan, he includes Hinayāna as the first level,
and does not use the terms elementary and final, but, instead, applies the terms provisional
and actual. It is interesting to note that here Zongmi uses the term Perfect teaching. The five
categories are as follows:605

1. the śrāvakas, who are ignorant about [the emptiness of] dharmas, teach
   non-real one-mind (yufa shengwen jiao jiashuo yixin 愚法聲聞教假說
   一心),
2. the provisional teaching of Mahāyāna clarifies that the differential
   maturing (vipāka) ālayavijñāna is called one-mind (dasheng quanjiao
   ming yishu laiye ming wei yixin 大乘權教明異熟賴耶名為一心),
3. the actual teaching of Mahāyāna clarifies that tathāgatagarbha and
   ālayavijñāna are the only one-mind (dasheng shijiao ming rulaizang
   zangshi wei shi yixin 大乘實教明如來藏藏識唯是一心),
4. the sudden teaching of Mahāyāna teaches one-mind because it transcends
   purity and impurity (dasheng dunjiao minjue ranjing gu shuo yixin 大乘
   頓教泯絕染淨故說一心),
5. the perfect teaching teaches that all existent things are one mind (zonggai
   wanyou ji shi yixin 一乘圓教總該萬有即是一心).

The provisional teaching includes the second, third and fourth levels of Chengguan,
the actual teaching corresponds to the fifth and sixth levels of Chengguan. However, the
seventh level, the tathāgatagarbha doctrine, which is the highest teaching of the actual
teaching in Chengguan’s classification, is called the sudden teaching by Zongmi. It is
important to note that Chengguan and Zongmi identified the sudden teaching with Chan
Buddhism, while earlier Huayan masters, Zhiyan and Fazang described it as the silence of

---

605 Zongmi explains the ten levels of one-mind in two works of his: 1. his subcommentary to Chengguan’s commentary
to the forty fascicle Huayan jing, Huayan jing xingyuanpin shuchao 華嚴經行願品疏鈔, X05, no. 229, p. 245, b18-p. 246,
b21 // Z 1:7, p. 422, b16-p. 423, c1 // R7, p. 843, b16-p. 846, a1. his Great commentary to the Scripture of Perfect
Enlightenment, Yuanjue jing dashu 圓覺經大疏, X09, no. 243, p. 353, c2-p. 354, b12 // Z 1:14, p. 138, c2-p. 139, b6 // R14,
p. 276, a2-p. 277, b6.
Vimalakīrti, the right attitude in front of the ineffable truth.\textsuperscript{606} As a patriarch of Chan Buddhism, Zongmi secured a high position for Chan Buddhism in his scheme. In addition, he was much more concerned with the dichotomy of purity and impurity, which plays important role from the perspective of Buddhist practice. At the second level of actual teaching is showed that purity and impurity return to the *tathāgatagarbha* (*zongshe ranjing gui rulaizang* 總攝染淨歸如來藏), which is to say that the *tathāgatagarbha* is the source for all pure and impure deeds, while at the level of sudden teaching this dichotomy is transcended. Zongmi says:

The sudden teaching of Mahāyāna teaches one-mind because it transcends purity and impurity. It means that the pure root-mind originally does not have the dichotomy of purity and impurity. Due to the defilement of deluded conceptualization it is provisionally explained as purity. If the delusion is originally empty, purity as a characteristic ceases, and only the purity of originally enlightened mind becomes manifested.\textsuperscript{607}

In this passage, the Chan teaching is very obvious, the mind is originally pure, only due to delusion its purity is not seen. As soon as the delusion comes to an end, the enlightened nature of mind becomes manifested. Next, the perfect teaching advocates that all existing things are mind-only. At this level, the practitioner realizes enlightenment, and consequently, sees that mind is beyond characteristics, and eventually all phenomena are mind-only, they all can be traced back to the final source, the absolute mind. Due to their dependence on the absolute mind, the three aspects of Huayan insight, the mutual inclusion, the mutual identity, and the limitless interpenetration are revealed. Zongmi says:

The fifth is the Perfect teaching [according to which] all existent things are one mind. This means that he/she does not know that mind transcends all characteristics, but after enlightenment characteristics disappear, and this way mind-only becomes manifested. All phenomena perceived are mind. This is the apprehension of the ultimate mind-nature. As the *Avatāṃsakā*-sūtra says for

\textsuperscript{606} Gregory 1991: 137-141, 144-153.

\textsuperscript{607} *Yuanjue jing dashu* 圓覺經大疏, X09, no. 243, p. 354, a2-5 // Z 1:14, p. 138, d8-11 // R14, p. 276, b8-11.
In his description of the three aspects of Huayan insight, he keeps on underlying the dependence of phenomena on the absolute mind. He continues:

The first aspect is the mutual inclusion [of phenomena]. It means that all phenomena and dharmas are the absolute mind, and become manifested. One phenomena of the whole mind can pervade all phenomena in accord with mind. All phenomena of the whole mind can penetrate into one phenomena in accord with mind. In accord with mind, the mutual inclusion of phenomena is unobstructed. The second aspect is the mutual identity [of phenomena]. It means that one phenomenon is completely identical with the absolute mind, and as mind is identical with all phenomena, this one phenomenon is identical with all phenomena, and, this way, all phenomena are identical with one phenomenon. The third aspect is the limitless interdependence [of phenomena]. It means that given that all phenomena are completely mind, [one phenomenon] includes what the all phenomena include, as all phenomena are mind-only. Again [the other phenomena] include all phenomena, it is limitless and limitless. Every phenomenon is endowed with the absolute mind, and in accord with mind [phenomena] are unobstructed.

From this passage above, it is very clear that Zongmi gave priority to the absolute mind, as even in his explanation of the central Huayan tenets he keeps on emphasizing the absolute mind as a clue for understanding the ultimate truth of Huayan Buddhism, the interrelated existence of all phenomena.

---

iv. Conclusion

As we saw above, the scheme of the ten levels of consciousness-only was formulated by the third patriarch of the Huayan school, Fazang. His innovation was a kind of response to the levels of consciousness-only put forward by Kuiji, the master of the rival Faxiang school. Kuiji cited 'the three realms are mind-only' from the *Buddhāvatamsaka-sūtra* in his elaboration of this topic, which might have been the reason why Fazang connected his discussion of the ten levels of consciousness-only to the exegetical explanation of this famous slogan in his commentary to the *Avatamska-sūtra*.

First, we attempted to reconstruct the original meaning of the 'three realms are mind-only' in the light of the context of the sūtra. It was shown that this phrase, which is often cited in the Buddhist literature as the proof of Yogācāra philosophy, appears in connection with the tenet of the dependent arising. The sūtra says that our lack of understanding the Absolute truth leads to the existence and suffering. Although it is very obvious that the sūtra describes the deluded mind, Chinese masters of this scripture, Huiyuan and Zhiyan, under the influence of the *Tathāgatagarbha* teachings and the *Awakening of Faith*, interpreted this mind as both tainted and pure.

When Fazang explained this section of the scripture, he must have born in mind how his predecessors commented on it. The first three levels of consciousness-only, which are the views of Faxiang school, confirm that mind is tainted, while the next four levels, which reflect the opinion of old Yogācāra school, maintain that mind is ultimately pure. In fact, the fourth level can be regarded as a transitional stage, since the *ālayavijñāna* as the final reality is stated, but its nature is not determined. What Fazang added to the explanation of the 'three realms are mind-only' is the last three levels of consciousness-only, which describe the stance of the perfect teaching, Fazang’s own school. For him, the famous slogan is not only a proof of Yogācāra philosophy, or the Tathāgatagarbha teaching, but also a central concept which lays the foundation for the truth revealed in the *Buddhāvatamsaka-sūtra*, that is the interrelated existence of all phenomena.

Fazang’s scheme of the ten levels of consciousness-only was significantly refashioned in the hands of his successors, Chengguan and Zongmi. Chengguan was in the favor of including all teachings, thus he did not exclude even the Hīnayāna from this classification of teachings. In addition, at the seventh level, he emphasized the interfusion of nature and characteristics, which is in fact a harmonization of various conflicting views. For Zongmi,
being also the patriarch of Chan Buddhism, it was essential to show the clear and prestigious position of Chan Buddhism in the context of mind-only. Thus he rearranged the previous chart, and located the sudden teaching before the perfect teaching. Being concerned with Buddhist practice, he underlined the importance of the absolute mind as a prerequisite for the interrelatedness of phenomena.

b. Nature Origination: the manifestation of Absolute in the phenomenal world

i. Nature origination in Huayan studies

Nature origination is undoubtedly a central feature of Huayan Buddhism; one which cannot be ignored in any discussion of the special Huayan tenets, i.e. dharma-dhātu dependent arising (fajie yuanqi 法界緣起), phenomena and principle (shili 事理) ten profound gates (shi xuan men 十玄門), six marks (liu xiang 六相), four dharma-dhātus (si fajie 四法界), and so on. It is widely known that this term derives from the title of the thirty-second chapter of the 60-fascicle Huayan jing 華嚴經, Baowang rulai xingqi pin 寶王如來性起品. This can be translated as Nature Origination of the Jewel King Tathāgata (we will refer to it as Manifestation of the Tathāgata) translated by Buddhabhadra in 420. However, its meaning is thought to be primarily influenced by the Treatise on the Awakening of Faith in the Mahāyāna (Dasheng qixin lun 大乘起信論),610 which describes mind in two aspects: mind as suchness (xin zhenru 心真如) and mind subject to birth-and-death (xin shengmie 心生滅). Fazang identifies the former aspect with the Absolute (li 理) and the latter with the phenomenal (shi 事), and regards the manifestation of their unobstructed interaction as ālayavijñāna. Next, the ālayavijñāna, which is identical with tathāgatagarbha, is said to give rise to all dharmas.611

In Japanese Huayan studies nature origination is discussed from several points of view. Takasaki Jikidō extensively studied the formation and evolution of Tathāgatagarbha thought.612 He meticulously compared the various versions of the Sūtra Manifestation of the Tathāgata in order to find the possible original Sanskrit equivalent of the term ‘nature origination’ which appears not only in the title of the sūtra, but also in the text itself. In some versions, the compound ‘nature origination’ appears only in the name of the bodhisattva-interlocutor called Rulai zuxing chengshou 如來族姓成首 in Dharmarakṣa’s version, Rulai xingqi miaode 如來性起妙德 in Buddhhabhadra’s and Śikṣānanda’s version, and De-bzhin gshegs-pa’i rigs-su byung-ba’i dpal in the Tibetan translation. According to the Tibetan and Śikṣānanda’s versions, here this compound means “born into the lineage of Tathāgata.”

610 T32, no. 1666, no. 1667.
Takasaki reconstructed the original Sanskrit term as gotra (or kula) saṃbhūta. On the basis of the Tibetan title, De-bzhin gshegs-pa skye-ba 'byung ba and the Mahāvyutpatti, he reconstructed the original title as Tathāgata-utpatti-saṃbhava-nirdeśa-sūtra. He translated the Tibetan version into Japanese. He showed that this sūtra, which was translated first by Dharmarakṣa as an independent sūtra, is a precursor of tathāgatagarbha thinking. The term tathāgatagarbha (rulaizang 如來藏) appears only once in Buddhabhadra’s translation, but the other versions do not confirm the existence of this term in the original text, thus it must be Buddhabhadra’s interpolation. However, the text explicitly claims the presence of Buddha’s wisdom in all living beings, or at least, as we will see later, in almost all living beings.

Although there are several other studies of this very important early Mahāyāna sūtra, we will now turn our attention to the study of the Chinese exegetical tradition of this scripture. Even if nature origination is regarded as one of the most important Huayan innovations, anybody attempting to reconstruct the development of this concept must have recourse to a few passages scattered among the works of Huayan masters. In addition, these passages often seem to be rather terse and cryptic, thus demanding considerable hermeneutical effort on the part of the reader to decipher their meanings. In analysing these passages of Huayan commentaries the context of the sūtra is often neglected, so it is hardly surprising that the term “nature origination” and its meaning easily become detached from the sūtra.

We find several studies on the theory of nature origination as it was propounded by the second patriarch of the Huayan tradition, Zhiyan (602-668), who first used this term. It has been shown that the southern Dilun master, Huiyuan (523-592), strongly influenced his formulation of the concept. In Huiyuan’s work we find the term ‘dependent origination of absolute nature’ (zhengxing yuanqi 真性緣起). However, Zhiyan lays more emphasis on the tainted aspect of the mind than Huiyuan did in his philosophy. Other scholars study the change in the meaning of nature origination as taught by Fazang (法藏 643-712), who elaborated Zhiyan’s Huayan tenets and is regarded as the founder of the orthodox Huayan philosophy. As we might expect, Fazang actually discussed in greater detail certain

aspects of nature origination that were rather obscure in Zhiyan’s works. Even if we cannot find a thorough treatment of this term in the writings of Li Tongxuan 李通玄 (635-730), the lay hermit of Wutaishan, Kojima Taizan, argues that it played a crucial role in his philosophy; however, his understanding of nature origination was based on the Book of Change, and was thus at variance with Fazang’s.620 Kojima argued that actually there were two branches of Huayan tradition connected with two of the sacred mountains of Chinese Buddhism: the Zhongnanshan 终南山, near Chang’an and Wutaishan 五台山, the alleged abode of Mañjuśrī.621 The special emphasis on nature origination and the nonobstruction of principle and phenomenal was characteristic of the Wutaishan branch, while the nonobstruction of phenomena was the hallmark of the Zhongnan branch represented by Zhiyan and Fazang. Finally, Chengguan 澄觀 (738-839), the fourth patriarch of Huayan tradition, who spent time on both mountains, united the two branches. His theory of four dharma-dhātus included both the nonobstruction of principle and phenomenal and the nonobstruction of phenomena.622 Chengguan definitely represents a new phase in the history of Huayan Buddhism, and his innovations in Huayan philosophy became fully-fledged in the writings of his disciple, Zongmi 宗密 (780-841). They were influenced by the Tiantai doctrine of nature inclusion (xingju 性具) in formulating their doctrines of nature origination.623 We find several studies investigating the interaction between nature origination and nature inclusion. Finally, Zongmi defines very clearly the role of nature origination and its relationship with dependent arising of dharma-dhātu and Buddhist practice.624

As we saw above, studies of nature origination from different points of view have contributed to our modern understanding of this important Huayan concept. However, in most cases these studies either try to take this term out of the context of the Sūtra Manifestation of the Tathāgata and the whole Huayan jing in order to establish a kind of philosophical system in Huayan Buddhism, or surmise that this kind of system is consciously or unconsciously inherent in it. In the Huayan classification of teachings (panjiao 判教), the Huayan jing is ranked as the highest teaching of the Buddha, being the scripture which directly reveals the experience of enlightenment, the absolute truth without any mediation as the Buddha recognised it in his complete enlightenment. Huayan masters (Zhiyan, Fazang, Huiyuan, Li Tongxuan, Chengguan) devoted themselves writing extensive commentaries to this scripture,
which is one of the most voluminous Mahāyāna sutras. In the process of composing these works they tried to understand buddhavacana as faithfully as possible. All the Huayan tenets are in one way or another closely related to the vision of truth which the scripture offers, and the Huayan exegetes endeavour to explore this realm relying on their knowledge of other Buddhist scriptures and praxis. Consequently, nature origination should be understood in the context of the Huayan jing, and not as a term for which the scripture serves only as a pretext and which developed outside the framework of the sūtra.

ii. The meaning of nature origination in the sūtra

What is the Sūtra Manifestation of the Tathāgata about? What is its connection with the whole Huayan jing? At the beginning of the sūtra, the Buddha appears as emitting light that illuminates all the worlds and extinguishes the sufferings of all beings. Finally, the light enters the head of the bodhisattva Wondrous Quality of the Origination of Tathāgata-nature. Inspired by the light of the Buddha the bodhisattva asks who is able to reveal the Buddha’s teaching. Then the Buddha emits light from his mouth, which again arrives at the mouth of bodhisattva Samantabhadra. In reply to the question of bodhisattva Wondrous Quality of the Origination of Tathāgata-nature, he relates that the Buddha shows this kind of transformation before declaring the teaching of the manifestation of Tathāgata. Next, bodhisattva Wondrous Quality of the Origination of Tathāgata-nature poses ten questions, to which Samantabhadra replies in the remaining part of the sūtra. The ten topics are as follows: 1. the characteristics of the manifestation of Tathāgata; 2. the body of Tathāgata; 3. the voice of Tathāgata; 4. the mind of Tathāgata; 5. the realm of Tathāgata; 6. the deeds of Tathāgata; 7. the perfect enlightenment of Tathāgata; 8. the turning of the Dharma wheel by Tathāgata; 9. the parinirvāṇa of Tathāgata; 10. the merits that stem from seeing, hearing and being associated with Tathāgata. Each of the first four topics is described from ten aspects, and is discussed for twice as long than the remaining six topics. This might suggest that the first four topics are closely related, and that they might indicate a possible urtext of the sūtra. Although the term trikāya does not appear in the text, this sūtra exhibits clear signs of Mahāyāna Buddhology. According to this scripture the Buddha does not in fact appear in the world and does not enter parinirvāṇa, but remains in the pure dharma-dhātu (qingjing fajie 清淨法界) forever. However, he manifests
(shixian 示現) his nirvāṇa and performs other actions for the benefit of all living beings. Nonetheless, his appearance in the world is not real: it is described as illusion or vision. He acts spontaneously without effort or discrimination, responding to the needs of beings. He is present everywhere in the universe where living beings are in need; he is like the Sun, the Moon, the Earth, rain and space. To put it simply, the sūtra relates how the Absolute appears in the world of phenomena. This content is very much in accordance with the theme of Huayan jing, as the whole sūtra describes how the Buddha manifests himself and his teaching after attaining enlightenment.

Explaining the features of the mind of the Buddha, the Sūtra Manifestation of the Tathāgata states that all living beings are endowed with the wisdom of Tathāgata. In the text this is the tenth aspect of the mind of Tathāgata, claiming that his wisdom is omnipresent in living beings. As we saw above this statement can be interpreted as an early appearance of tathāgatagarbha thought. The wisdom of Tathāgata is inherent in all living beings, but due to false discrimination it cannot manifest. As soon as discrimination is eliminated all living beings can realize that their minds are no different from the enlightened mind of the Tathāgata, and then the non-discriminating mind of Tathāgata will appear in them. Once this mind is created in the course of enlightenment, the awakened person is detached from ordinary mental activities, and his mind comes to be described as wisdom. This wisdom is depicted in terms of three aspects here: it is omniscient, self-existent and nonobstructed. This passage seems to prove that the sūtra teaches the universal potential of Buddhahood as all living beings are said to possess Tathāgatajñāna and to be able to make it appear.

However, the seventh aspect of the mind of Tathāgata seems to contradict this assumption.

Son of Buddha, the Tathāgata’s wisdom, the great king of medicine called non-accomplished root does not come into being in two places. What are those two? It does not come into being in the śrāvakas and pratyekabuddhas who have fallen in the abyss of non-conditioned and in those vessels who have deteriorated faculty and motivation and who are filled with the water of craving. Son of Buddha, the Tathāgata’s wisdom, the great king of medicine has the character of not coming into being [in those two places], thus it does not come into being, [but] it does not have the character that it does not come into being completely. In bodhisattvas with highest intention and equal mind it comes into being. In accordance with the devotion and highest

The wording of the Tibetan text is quite different from all the Chinese versions, though we can find elements of it in Dharmarakṣa’s translation. This quite clearly proves that the Tibetan translation was made from the Sanskrit, and not from the Chinese, in spite of claims to the contrary in the comparative catalogue of Buddhist scriptures compiled under the Yuan dynasty. However, both Dharmarakṣa’s and Buddhabhadra’s texts, like the Tibetan version, state very clearly that the wisdom of the Buddha cannot grow in followers of Hīnayāna and in those beings who do not have the requisite capacity. In contrast to these versions, Śikṣānanda adds that the wisdom of Tathāgata does not detest or reject even those beings. 然亦於彼曾無厭捨. Śikṣānanda or his Chinese associates might have found the explicit statement that some beings are denied access to the wisdom of Tathāgata untenable in the Tang period, when the tenet of universal Buddhahood was prevalent. Nonetheless, as we do not have the Sanskrit text that Śikṣānanda used, we cannot completely exclude the possibility that the original text included this sentence. As we will see later, Chinese exegetes were to solve this contradiction, proving the universal presence of Buddha-nature.

Finally, let us examine the occurrences of the term “nature origination” in Buddhabhadra’s translation and its corresponding expressions in the other three versions of the Sūtra Manifestation of the Tathāgata:

632 Da fangguang fo huayan jing 大方廣佛華嚴經, T10, no. 279, p. 272, b6-11.
633 Qing Jixiang 慶吉祥 composed the catalogue titled Zhiyuan fabao kantong zonglu 至元法寶勘同總錄 in 1285-1287. For this claim, see T 99, 190b.
The first example is the name of the bodhisattva addressed by Samantabhadra, who actually expounds the teaching of the sūtra. This is the only example of the compound ‘nature origination’ in the other three versions. Most often (2-8) we find the expression the “correct dharma of nature origination of Tathāgata” (rulai xingqi zhengfa 如來性起正法) in Buddhahadra’s text when the first of the ten topics, the characteristics of the manifestation of the Tathāgata, is being described. The corresponding Tibetan phrase is “the teaching of the origination and appearance of the Tathāgata” (de bzhin gshegs pa skye ba ’byung ba bstan pa). As we saw earlier these two terms skye ba and ’byung ba can be identified as the Sanskrit utpatti and sambhava, respectively. Śikṣānanda translates it as appearance or manifestation (chuxian 出現), while Dharmarakṣa most often uses the term xingxian 興顯, but sometimes adds shixian 示現 or xianshen 現身 reflecting the original presence of two terms. In two
cases (9-10) we find only skye ba or 'byung ba in the Tibetan. In other contexts (11-13), we find “nature origination of the Tathāgata” (rulai xingqi 如来性起) or “the teaching of nature origination of the Tathāgata” (rulai xingqi fa 如来性起法) which are the lineage/family/class of Tathāgata (de bzhin gshegs pa’i rigs) in the Tibetan. Here rigs is the Sanskrit gotra or kula, which corresponds to the Chinese term xing 性 in Buddhabhadra’s text, zhong 種 in Śikṣānanda’s version and zhong 種, zhongxing 種性 or zuxing 族姓 in Dharamarakṣa’s rendition. In the last two examples (14-15) Buddhadharma’s translation seems to be very arbitrary as there is no corresponding expression in the other versions.

iii. The nature origination in early Huayan exegesis: Zhiyan

Let us now discuss how the term ‘nature origination’ was explained in Huayan exegesis. We will trace its development by selecting three eminent masters, Zhiyan, Fazang and Chengguan, each of whom represents a different stage in the evolution of Huayan ideas. The Buddhāvatamsaka-sūtra is a collection of formerly independently circulated sūtras, so establishing its coherence required great hermeneutical efforts by commentators. A narrative framework served as a convenient means for establishing closer links between the isolated chapters, thus commentators emphasised the "seven places and eight or nine assemblies" in and during which this sūtra was preached. To prove that the sequence of chapters is definitely not accidental but is arranged with a hidden meaning, Huayan commentators introduced the term lai yi 來意, the purport of coming, at the beginning of their commentaries to every chapter where they explain why the chapter they are about to comment on appears at that point in the sūtra. The Sūtra Manifestation of the Tathāgata is said to be closely connected with the preceding chapter, entitled The Practice of Samantabhadra. In this chapter Samantabhadra enumerates the hundred hindrances arising from anger, then introduces the sixty practices that a bodhisattva should always perform. The Huayan exegetes agree that this chapter is the cause and the Manifestation of Tathāgata is the result. As Zhiyan says:

The previous [chapter the Practice of] Samantabhadra clarifies the cause which can raise, and the next [chapter] discusses that which arose.
At the beginning of his commentary on the chapter *Manifestation of the Tathāgata* in his commentary on the *Huayan jing, Da fangguang fo Huayan jing shouxuanfenqi tongzhi fanggui* 大方廣華嚴經搜玄分齊通智方軌 Zhiyan gives a very terse definition of nature origination.

In the term ‘xingqi’ ‘xing’ means substance; ‘qi’ means the appearance [of substance] on the ground of the mind. 635

Zhiyi further elaborated this definition in his last work, *Huayan jing neizhangmen deng za kongmu zhang* 華嚴經內章門等雜孔目章.

Nature-origination clarifies the limit/boundary of the dharma-dhātu dependent arising of one vehicle. It is originally the ultimate and detached from cultivation and production. Why? Because it is detached from marks. It originates from the great understanding and great practice. It is in the bodhi mind which is detached from discrimination. Thus it is called origination. As this is the nature of dependent-origination, this is spoken of as origination. Origination is non-origination, and non-origination is nature origination. 637

性起者，名一乘法界緣起之際。本來究竟，離於修造。何以故？以離相故。起在大解、大行。離分別菩提心中，名為起也。由是緣起性故，說為起。起即不起，不起者是性起。 638

635 Kamata suspects that the use of the term ‘ground of mind’ shows the early impact of Chan Buddhism on Huayan. See Kamata 1957. Ming-Wood Liu relates this term to Dilun tradition, citing Vasubandhu’s commentary to the *Dasabhūmika-sūtra* 心地者：隨心所受三界中報。又隨心所行一切境界亦名心地。See *Shidi jing lun* 十地經論, T26, no. 1522, p. 129, a6-8; Liu 1995, Gimello 1976: 443.

636 *Da fangguang fo huayan jing shouxuan fenqi tongzhi fanggui* 大方廣華嚴經搜玄分齊通智方軌, T35, no. 1732, p. 79, b29-c2.

637 Robert Gimello’s translation: “The doctrine of nature-origination illustrates that the limits of the dharma-element dependent origination of the One Vehicle, its origin and its ultimate, are divorced from cultivation. How so? Because they are free of marks. Origination in the ‘great understanding’ and the ‘great practice,’ in the bodhi-mind divorced from discrimination, this is called ‘ch'i’. Because it is the [very] nature of the dependent origination, it is spoken of as ‘origination.’ [But this] origination is precisely a non-origination, [and so] it is really a non-origination which is ‘nature-origination.’” See Gimello 1976:443.

638 *Huayan jing neizhangmen deng za kongmu zhang* 華嚴經內章門等雜孔目章, T 45, no. 1870, p. 580, c4-8.
Nature origination is depicted as a process of the autonomic manifestation of inherently pure nature, and this spontaneous evolution does not depend on external conditions. It happens through understanding and practice while realizing the nondiscriminating nature of the mind. As soon as discrimination is eliminated, omniscient, self-existent and nonobstructed wisdom appears, as the sūtra says. Even though Zhiyan does not say so explicitly, it is quite evident that he discusses the realization of Buddha-nature or tathāgatagarbha or, as the sūtra puts it, the wisdom of Tathāgata.

Nature origination is different from the practice conditioned by external factors such as teaching, master, etc. If the conditions are not present it is impossible to carry out in practice, while the absence of conditions cannot exert any influence on nature-origination: the wisdom of Tathāgata remains inherent in living beings. This wisdom or Buddha-nature is not static or isolated, but can manifest itself without any phenomenal feature in accordance with the teaching. It is the way in which causality works on the level of nature origination. The sūtra itself also serves as an example for causation of nature origination. As we saw above, the sūtra discusses the result or fruit (guo 果) aspect of nature origination while describing the Tathāgata in ten topics. However, the causal (yin 因) aspect is also treated while relating the wisdom of Tathāgata in all living beings.

Question: If nature-origination transcends speech and is divorced from features, how can it have cause and result? [Answer:] It has two meanings. First, in the sūtra nature-origination is discussed as cause, and is clarified as result. Thus it has two [aspects]. Second, as nature does not abide, it originates. When it originates, it divorces features, and is in accordance with Dharma. Therefore, it has [the aspects of] cause and result.

Question: When it originates and divorces from features, what is the difference from cultivation based on conditions? Answer: If cultivation based on conditions is divorced from conditions, then it cannot be established, while nature-origination is not damaged even if there are no conditions. Thus they are different.

As we have seen Buddhabhadra’s version, which Zhiyan commented on, was quite clear in stating that śrāvakas and pratyekabuddhas and those beings who do not have the right

---

capacity cannot have the roots of the wisdom of Tathāgata. This was definitely unacceptable for Zhiyan, thus he argued that the text means that the sprouts of bodhicitta have not grown in these beings, but it does not say that they do not have fruit or leaves of the wisdom of Tathāgata. He points out that for these beings to be excluded would be in contrast with the passage saying that every mote of dust includes a sūtra, referring to the wisdom of Tathāgata being inherent in all beings. Zhiyan states that śrāvakas and infernal beings both have the essence of the wisdom of Tathāgata, however the infernal beings do not have any fruits or leaves of this wisdom, while śrāvakas are endowed with these results.

Question: If the śrāvakas and others have nature-origination, why does the text say that there are two places where the roots do not grow?
Answer: when it says ‘do not grow’ it means that the sprouts of the nature-origination of bodhi mind do not grow, it does not say that there are no fruits and leaves. If there were not, then there would be no sūtra in a mote of dust. It can be known on the basis of the simile. If it is explained in details then there are no fruits or leaves in hell but there is essence; the śrāvakas have essence and fruit and leaves.

問：若聲聞等有性起者，何故文云於二處不生根？答：言不生者，不生菩提心性起芽，不言無果葉。若無者，微塵中不應有經卷。准喻可知。若細分別，地獄無果葉有體，聲聞有體及果葉也。 640

He stresses that all living beings can realize the great bodhi tree: there is no difference here between ordinary beings and great bodhisattvas. Only the process of attaining enlightenment is different: those who are more advanced on the path can reach this state sooner than others. The reason is that all beings originally have (benyou 本有) the wisdom of Tathāgata. This originally-possessed capacity is depicted as the root and actuality of dependent origination. This is beyond language and verbal concepts, since it reveals the dharma-dhātu, the realm of reality through which an awakened person perceives the world. This is the state in which the ordinary concept of time ceases.

The ‘originally possessed’ means that it is the root and actuality of dependent origination. It is divorced from verbal expressions and affections, as the dharma-dhātu is manifested and the three periods (past, present, future) do not move. The [chapter on] nature origination says that the minds of living beings have a tiny sūtra and the great bodhi tree. The [ordinary] living beings

and the saints both realize it, some people realize it sooner and some later, [but] the trees are not
different. Thus it is known that they originally have it.

iv. The nature origination in classical Huayan exegesis: Fazang

The work Questions and Answers about the Huayan jing 華嚴經問答, attributed to
Fazang, very clearly elaborates the two terms ‘originally possessed’ (benyou 本有) and ’produced from cultivation’ (xiusheng 修生), introduced by Zhiyan. The text states that
there is no difference between these two teachings in importance, but Buddha teaches them
according to the capacity of the audience. The sequence of the two teachings is not fixed, it
depends on the people which teaching is taught first.642 However the authenticity of this work
was called into question both by the Japanese Kegon monk Gyōnen (?-1321) and by modern
scholars.643 Thus we turn our attention to Fazang’s commentary to the Huayan jing, Huayan
jing tanxuan ji 華嚴經探玄記, which gives a detailed account of the meaning of nature
origination.

First he gives a definition of nature origination based on the chapter tathāgatagarbha of
the Buddha-nature Treatise:

The chapter tathāgatagarbha of the Buddha-nature Treatise says that it comes from abiding self
nature. Having come, it arrives. Having arrived, it attains. Thus it is called Thus Came. The
changeless is called nature, the manifestation of function is called origination. This is the nature
origination of Tathāgata. Moreover, the absolute principle is called suchness and it is also called

641 Da fangguang fo huayan jing shouxuan fenqi tongzhi fanggui 大方廣佛華嚴經搜玄分齊通智方軌, T 35, 1732, p. 62, c29-p. 63, a3.
642 “If it is favourable for living beings that the natural seed is the first and seminal permeation is the second, then
[Buddha] teaches that originally existent is the first and production from cultivation is the second. If it is favourable for living
beings that production from cultivation is the first and originally existent is the second, then [Buddha] teaches that the natural
seed is the second and seminal permeation is the first. However, it is taught in accordance with the capacity of [the audience],
and in fact originally there is no ranking in teachings. As there is no ranking in teachings, [Buddha’s] excellence lies in
[deciding] the sequence of [his teachings]. Therefore the sequence of the doctrines of the sacred teaching is not fixed.”

若有機緣，眾生以性種為前，習種為後利益，即說本有前有，修生後有。若有眾生以修生為前，本有為後利益，
即說性種為後，習種為前。但隨機處中說耳。勿見法定本有前後。以其法無前後故。即善當於先後耳。是故諸聖教
之說前後不定。See Huayan jing wenda 華嚴經問答, T45, no. 1873, p. 610, a17-23.
643 See Endō 1965.
nature; the manifestation of function is called origination and also called coming. Thus the Thus Came is nature origination.\textsuperscript{644}

The Treatise propounds that \textit{tathāgatagarbha} does not change when it becomes realized. When it comes, it arrives and naturally attains the result. There is no difference between \textit{tathāgatagarbha} as a cause and \textit{tathāgatagarbha} as a result.\textsuperscript{646} Here, Fazang goes one step further than Zhiyan by explicitly identifying the nature of nature origination with \textit{tathāgatagarbha}.

He goes on to explain that the manifestation of function is called origination. This function is the manifested aspect of \textit{tathāgatagarbha} in the phenomenal world. It is similar to Zhiyan’s statement that the essence appears on the ground of the mind, i.e. in mental functions. As the absolute principle can denote both suchness and nature, just as the manifestation of function can be designated both origination and coming, Fazang identifies the two terms, nature-origination and Tathāgata. The appearance of the Absolute in the phenomenal world is what both terms mean, and finally it is what the \textit{sūtra} teaches. This is the appearance of Tathāgata in the world as a teacher for benefit of living beings and the appearance of the wisdom of Tathāgata in living beings.

Next, Fazang explains the purport (\textit{zongqu} 宗趣) of nature origination in ten aspects. First, he distinguishes three kinds of nature and origination on the basis of the \textit{Buddha-nature Treatise}.\textsuperscript{648} The three kinds of nature are principle, practice and fruit (\textit{li xing guo} 理行果).\textsuperscript{649} Although he uses different terms, their meanings are identical with those of the \textit{Treatise}. Principle-nature is the Buddha-nature inherent in all beings before they begin to practice Buddhism. Practice-nature is the Buddha-nature in those beings who practice Buddhism.

---

\textsuperscript{644} The original text is slightly different: “This Thusness nature comes from the [Buddha] nature that dwells in itself. Having come it arrives, and having arrived it attains. The essence of Thusness never changes; in this sense it is eternal.” See King 1991: 52.

\textsuperscript{645} \textit{Huayan jing tanxuan ji} 華嚴經探玄記, T35, no. 1733, p. 405, a10-13.

\textsuperscript{646} King 1991: 47-48.

\textsuperscript{647} Nakajō 1988.

\textsuperscript{648} \textit{Huayan jing tanxuan ji} 華嚴經探玄記, T35, no. 1733, p. 405, a21-26.

\textsuperscript{649} The Treatise says: Within the cause of attainability are three kinds of [Buddha] nature: the nature which dwells in itself, the emergent nature, and the attaining nature. The record says, the nature which dwells in itself is [Buddha nature] in the stage of ordinary person who has not yet begun Buddhist practice; the emergent nature is [Buddha nature] in the stage of Buddhist practitioner from the first awakening of mind up to the completion of the Path; the attaining nature is [Buddha nature] in the stage of the person who has completed the Buddhist path.” See King 1991: 41.
Fruit-nature is the Buddha-nature of those practitioners who have attained enlightenment. These three aspects of nature substantiate the definition given above by saying that Buddha nature is always present in beings: before cultivation, during cultivation, and after the result of cultivation is attained.

He explains nature origination on three levels of the Buddhist path. First, on the level of bodhisattva who has started to practice the Buddhist teaching, principle-nature is the nature and the accomplishment of practice-nature (xingcheng 行成) is the origination. This is different from the level of ordinary beings where although nature is present, there is no origination (youxing er wuqi 有性而無起). Here, Fazang separates the two elements of the compound ‘nature origination’, and states that ordinary beings have only nature, while Zhiyan preserved the unity of the compound, as we saw above, and taught that all beings have nature origination. On the level of Buddha principle-nature and practice-nature are nature and fruit-nature is the origination. This is to say that due to the inherent Buddha-nature and practice the fruit of enlightenment is attained. On the third level, the fruit attained through the perfect completion of principle-nature and practice-nature is nature and the function that is Buddha’s appearance in accordance with the capacities of beings and his teaching of various upāya are the origination. Fazang stresses that this final level is explained in the Sūtra Manifestation of Tathāgata. As we saw above, although the scripture definitely revolves around the manifestation of the Tathāgata in the world as a teacher, the wisdom of Tathāgata inherently existent in beings is also advocated.

However, Fazang emphasizes the priority of principle-nature, as practice-nature can be manifested only relying on principle-nature. In addition the function of fruit-nature is also subordinated to principle-nature, as the function of fruit-nature is the function of absolute nature. Moreover, practice-nature is identical with principle nature, as finally principle-nature is what appears.

Nature origination is not designated as dependent origination because in the case of dependent origination that which is originated appears as the [impure] conditions, while in the case of nature origination that which is originated is pure function (jingyong 淨用), and is in accordance with the realization of absolute nature (zheng zhenxing 證真性). Fazang goes on to discuss whether on the one hand impure dharmas are not included in nature origination as they belong to ignorance, or on the other hand nature origination includes all impure dharmas.

---

651 Huayan jing tanxuan ji 華嚴經探玄記. T35, no. 1733, p. 405, b4-18.
as Buddha saves living beings from these impure dharmas. This is a new aspect of the discussion of nature origination, but it is also closely connected with the meaning of Manifestation of Tathāgata. It sheds light on an important feature of Buddha’s appearance in the world. Even if Buddha’s enlightenment is completely pure, the only reason why he manifests himself in the world is to save beings from suffering. Thus the tainted world cannot be separated from his manifestation, as he would not come to the world if there were no suffering and impure dharmas.

Fazang provides the special Huayan reading of this sūtra. Generally, Mahāyāna Buddhism propounds that beings can have the causal aspect of Buddha-nature, implying that sooner or later they will attain enlightenment as the result of this inherent potential. As Huayan Buddhism teaches the mutual inclusion of beings and Buddha, Vairocana representing the completely enlightened Buddha, the aim of all Buddhist practices contains all living beings, and consequently the result aspect is present in all living beings before they attain enlightenment. Moreover, according to Mahāyāna, absolute nature pervades only animate beings and inanimate beings are excluded, thus only animate beings can attain enlightenment. Huayan Buddhism claims the mutual inclusion of all beings, animate or inanimate, so nature origination is extended to the whole universe including all animate and inanimate beings. Thus nature origination is the way in which the world is perceived by an enlightened person: it depicts the dharma-dhātu from the viewpoint of a Buddha. Finally, this is the vision revealed by Buddha immediately after his enlightenment in the Huayan jing. Here, nature origination is not only a term related to one chapter of the Huayan jing, but also a crucial principle that underlies the whole Huayan jing, depicting the experience of enlightenment.

If the teaching of three vehicles is concerned, there is only the causal aspect of [Buddha] nature in the minds of living beings; there is no feature of resulting function. According to the perfect [Huayan] teaching the resulting dharma of Vairocana includes the realm of living beings. Therefore there are also resulting features in the bodies of living beings…. If the teaching of three vehicles is concerned, the absolute nature pervades animate beings and does not pervade inanimate beings, since the enlightened Buddha-nature is limited only to animate beings…According to the perfect [Huayan] teaching Buddha-nature and nature origination pervade animate and inanimate beings.

Finally, this insight into the dharma-dhātu is described with well-known Huayan terminology. Absolute nature pervades the whole universe, and as one is all and all is one, every dharma completely includes this nature. It is like Indra’s net, the symbol of Huayan Buddhism.

This absolute nature includes and pervades everything. That which was originated [by this nature] also contains everything. The part and the whole are unlimited, all partial places are complete. There is not one which does not include the infinite dharma-dhātu. Therefore [absolute nature] pervades all times, all places, all dharmas, etc. It is like Indra’s net: there is nothing which is not included.

既此真性融遍一切故，彼所起亦具一切。分圓無際，是故分處皆悉圓滿。無不皆具無盡法界。是故遍一切時一切處一切法等。如因陀羅網無不具足。654

Fazang commenced writing his commentary on the 80-fascicle Huayan jing translated by Śikṣānanda in 699, but he could not finish it, so his disciple Huiyuan took over this work, entitled Xu Huayan jing lüeshu kanding ji 續華嚴經略疏刊定記. In Śikṣānanda’s version, the Manifestation of Tathāgata is the thirty-seventh chapter, and the title is Rulai chuxian pin 如來出現品. The compound ‘nature origination’ is not found here; it is replaced by the word chuxian, which means ‘appear’, ‘manifest’. Huiyuan compares this with the title of this chapter in the 60-fascicle version, Baowang rulai xingqi pin 寶王如來性起品 and concludes that the word rulai 如來 can be found in the original Sanskrit, the xing 性 is missing, and the word qi 起 is equivalent with chuxian 出現.655

v. The Huayan exegesis of nature origination under Chan influence: Chengguan

In his commentary, entitled *Da fangguang Huayan jing shu* 大方廣佛華嚴經疏, Chengguan writes in the introduction to his discussion of this chapter that although the word ‘nature’ was added, it is not a mistake, as it is reasonable 性字雖是義加未爽通理. He explains the title, *Rulai chuxian* 如來出現 in terms of three bodies of Buddha. He cites passages from the sūtra showing that these three aspects can be found there. By the aspect of *dharmakāya* (fashen 法身) Tathāgata means that all dharmas are suchness (zhufa ruyi 諸法如義), and manifestation means that the principle of suchness eternally appears (ruli changxian 如理常現). By the aspect of *sambhogakāya*, Tathāgata means to become enlightened on the path of suchness and actuality (cheng rushi dao 乘如實道), and manifestation is the sudden appearance of the merit of original nature (benxing gongde 本性功德). By the aspect of *nirmāṇakāya* Tathāgata means that the omniscient Buddha comes to teach living beings, and manifestation is the appearance of this great function in accordance with their capacities (yingji dayong 應機大用). He stresses that this function is not separated from the essence. Buddha always appears in response to the needs of living beings, thus he always responds in his absolute form (jizhen er ying 即真而應); and, on the other hand, his response follows his nature origination, thus he is absolute in his response (jiying er zhen 即應而真). The three bodies are completely interfused (sanfo yuanrong 三佛圓融), therefore the Buddha’s appearance in the phenomenal world to teach living beings is the manifestation of his absolute form.

When the following sentences in the commentary are explained by the subcommentary (*Da fangguang fo huayan jing suishu yanyi chao* 大方佛華嚴經隨疏演義鈔), the relationship between nature origination and dependent origination is discussed.

Although response is dependent on conditions, it does not contradict nature [origination]. There is nothing which is not originated from *dharma-dhātu*. As pure [features] transcend the impure [features], nature is identical with origination. Without conditions nature cannot be discussed. Below the [Tathāgata] blesses Nature Origination Bodhisattva, he propounds the teaching. Although the false is identical with the Absolute, it is not in accordance with nature.

---

656 *Da fangguang fo huayanjing shu* 大方廣佛華嚴經疏, T35, no. 1735, p. 872, a12.
dc_915_14

Here is the sub commentary to this passage:

The text from ‘Although response is dependent on conditions’ explains that the meaning of nature origination is in accordance with the meaning of the responsive appearance. Altogether there are six aspects which establish nature origination.

First is to establish the identity of principle, [dependent origination and nature origination] are not contradictory. Therefore the meaning of manifestation can be both dependent origination and nature origination. If the features are discussed, they manifest relying on conditions, thus it is called dependent origination. Due to the influence of karma of living beings Tathāgata manifests with his great compassion. The eight aspects of Buddha’s life are born from dharma-nature, thus it is called nature origination. Now, as it is dependent on conditions, it is dependent origination without [self-]nature, so it is called nature origination. In addition, pure dependent origination is eternally in accordance with nature [origination], thus it is also called nature origination. Therefore the [commentary] says ‘Although response is dependent on conditions, it does not contradict nature [origination].’

In the sub commentary, Chengguan brilliantly elaborates all those ideas that were formerly advocated by Zhiyan and Fazang, establishing a theological system of the manifestation of the Absolute in the phenomenal world. He shows this process from two points of view, one being dependent origination, the other being nature origination. Like the Sūtra Manifestation of Tathāgata he explains manifestation on two levels: the manifestation of Tathāgata in the world as a teacher to save all living beings and the manifestation of the

---

659 Da fangguang fo huayan jing sui shu yanyi chao 大方廣佛華嚴經隨疏演義釵, T36, no. 1736, p. 615, a7-9.
660 The eight aspects of Buddha’s life: (1) descent into and abode in the Tuṣita heaven; (2) entry into his mother’s womb; (3) abode there visibly preaching to the devas; (4) birth from his mother’s side in Lumbinī; (5) leaving home at 19 (or 25) to be a hermit; (6) attaining enlightenment after six years’ suffering; (7) rolling the Law-wheel, or preaching; (8) entering nirvāṇa at the age of 80. See Soothill 1937: 38.
661 Da fangguang fo huayan jing sui shu yanyi chao 大方廣佛華嚴經隨疏演義釵, T36, no. 1736, p. 615, a9-15.
wisdom of Tathāgata in living beings. First, he shows that these two kinds of manifestation are not contradictory, because the dependently originated phenomena lack any kind of self-nature: they are empty. From this point of view dependent origination is nature origination. Just like Buddha’s career in the world, all of his deeds are intimately connected with dharma-nature, thus it is also called nature origination.

The commentary says: ‘There is nothing which is not originated from dharma-dhātu.’ The second is the citation from the Liang Treatise662 as evidence. This is the aspect that [dependent origination and nature origination] mutually become completed, and it makes it clear that nature becomes completed by conditions. This nature origination has two meanings: first, as the dependent origination is without [self-]nature, this is nature origination; second, as dharma-nature follows conditions, this is called nature origination. The former statement is the first aspect, and the latter one is the second aspect. It also must be said that ‘there is nothing which does not return to and realize the dhammakāya.’663 Therefore conditions and the wisdom [of Tathāgata] mutually become completed. This is to say that conditions establish nature, this is the former aspect. However, above we emphasized that they are not contradictory, now we emphasize that they become mutually completed. Thus this is the aspect of mutual completion.

The close relationship between them is shown by the citation from the Commentary to the Mahāyāna-saṃgraha, which says that everything was born from dhammakāya and returns there. Chengguan changes the term ‘dharma-dhātu’ to dhammakāya. From the aspect of enlightenment all beings are related to the Absolute. We saw above that dependent origination is nature origination; they are not contradictory. Now, he argues that they mutually become completed. According to Huayan Buddhism, the Absolute is not fixed, is not detached from the phenomenal world, as Yogācāra claims, but is very active. This is called the dependent origination of tathāgatagarbha.665 To appear in the phenomenal world, the Absolute needs

---

662 This refers to the She dasheng lun shi 攝大乘論釋, Commentary on the Mahāyāna-saṃgraha translated by Paramārtha, who first went to the Liang dynasty to offer his services to emperor Wu. Unfortunately Wu soon died, so the Indian master did not get the support that he expected for his activity. (For his biography, see Paul 1984: 11-37.) Here Chengguan refers to the following passage: 無不從此法界流故者。第二引梁論證成。即相成門，明性成於緣故。此性起自有二義：一從緣無性而為性起，二法性隨緣，故名性起。前段即初義，今段即後義。亦應云無不還證此法身故。此乃緣智相成。即緣成性，即是前義。但前取無違，今取相成。是故此為相成門也。664

663 This too is a quotation from the Liang Treatise, see footnote above.
664 Da fangguang fo huayan jing sui shu yanyi chao 大方廣佛華嚴經隨疏演義鈔, T36, no. 1736, p. 615, a15-21.
conditions. Buddha’s appearance in the world is conditioned by the living beings who need instruction in order to get rid of suffering.

The commentary says: ‘As pure [features] transcend the impure [features], nature is identical with origination.’ The third [aspect] clarifies that [dependent origination and nature origination] mutually transcend. This is also to clear away obstacles. Someone might ask: Nature origination is pure and dependent origination includes impure [dharmas]. How can dependent origination be identical with nature origination? We will clear up this question. There are two kinds of dependent origination: one is impure, the other is pure. The pure one refers to the compassion of Tathāgata and all practices of bodhisattvas, etc. The impure one refers to the karmic influence of living beings, etc. If the impure [dharmas] transcend the pure ones, they belong to the [ordinary] living beings, and this is only dependent origination. Now, pure [dharmas] transcend the impure [ones], and this belongs only to Buddha, thus it is called nature origination.

Although they are identical, in certain respects they differ. Nature origination is undoubtedly pure, but dependent origination includes also impure dharmas, as the negative deeds of living beings are also dependently originated. On the level of ordinary beings who have not attained enlightenment the impure aspect transcends the pure aspect. On the level of Buddha, only pure dharmas are found, thus this dependent origination is called nature origination.

The commentary says: ‘Without conditions nature cannot be discussed.’ This is the fourth aspect, the mutual identity of [dependent origination and nature origination]. This is also to clear away obstacles. Someone might ask: Dependent origination is from the aspect of phenomena, and nature origination is from the aspect of principle. How can they be identical? We will clear up this question. Only if relying on conditions is without [self-] nature, can nature origination appear. Moreover, if conditions are seen, we can conclude that there is nature origination. If there are no conditions, which nature could be discussed? If there were nature without conditions, that would be the nihilism of emptiness.

---

666 Robert Gimello translates duo 奪 as sublate, as it includes the meanings of ‘to preserve’ and ‘to abolish’ just as the Chinese duo does. See Gimello 1976: 494.
667 Da fangguang fo huayan jing sui shu yanyi chao大方廣佛華嚴經隨疏演義鈔, T36, no. 1736, p. 615, a21-27.
Dependent origination is related to the world of phenomena which is designated as ‘shi’事 in Huayan Buddhism, while nature origination is the realm of Absolute called ‘li’理. These terms were introduced by the first patriarch of Huayan Buddhism, Dushun, in his famous treatise *Discernment of Dharma-dhātu (Fajie guanmen 法界觀門)*. Dushun 杜順 (557-640) substituted the words ‘form’ (se 色) and ‘emptiness’ (kong 空) for ‘phenomena’ and ‘principle’, respectively. The relation between them is expressed by the well known Huayan phrase, ‘unobstruction of principle and phenomena’ (lishi wuai 理事無礙). If nature could exist alone without conditions that would lead to the extreme of nihilism, the overemphasizing of emptiness.

The commentary says: ‘Below the [Tathāgata] blesses Nature Origination’. This fifth section cites this sūtra [Manifestation of Tathāgata] as evidence. The teaching is expressed by a person.

Here, Chengguan refers to the Bodhisattva Wondrous Quality of the Origination of Tathāgata-nature, the interlocutor of the sūtra, who has the compound ‘nature origination’ in his name.

The commentary says: ‘Although the false is identical with the Absolute’. The sixth aspect is that the false conceals the Absolute. Here, we are also clearing away obstacles. The obstacle could be the following. If dependent [origination] is identical with nature [origination], the false originally is empty of self-[nature], its essence is identical with nature [origination]. Why can the impure [dhammas] not transcend the pure [ones]? We will clear up this question. The pure dependent [origination] is in accordance with nature [origination], but the impure dependent [origination] is in contrast with it.

---

668 Da fangguang fo huayan jing sui shu yanyi chao 大方廣佛華嚴經隨疏演義鈔, T36, no. 1736, p. 615, a27-b3.
669 Da fangguang fo huayan jing sui shu yanyi chao 大方廣佛華嚴經隨疏演義鈔, T36, no. 1736, p. 615,b3-4.
Finally, the text stresses that even if the false is identical with the Absolute from one aspect, impure dependent origination is in contrast with nature origination. This final statement is very important in terms of Buddhist praxis. If everything were completely pure, there would be no any need for Buddhist cultivation. For a scholar monk, like Chengguan, it was essential to underline the theoretical grounds for Buddhist practice, especially in an age when Chan iconoclasm appeared. Chengguan’s disciple, Zongmi 宗密 (780-841), who was also the patriarch of Chan Buddhism, continued his teacher’s work: he further elaborated the relationship between dependent origination and nature origination, and emphasized Buddhist cultivation.

670 *Da fangguang fo huayan jing sui shu yanyi chao* 大方廣佛華嚴經隨疏演義鈔, T36, no. 1736, p. 615, b4-7.
V. Faith and Practice in the *Buddhāvataṃsaka-sūtra* and Huayan school
1. “Faith” in Buddhism

In the West it is quite common to think that Buddhism is different from other world religions in that it does not require its followers to have solid faith in a transcendental being. This faith is a prerequisite for Christians, who first have to accept the existence of God and of his will. Westerners who favour the rational aspect of Buddhism tend to regard Buddhism as a kind of philosophy or attitude towards life, and emphasise that Buddhism can be practiced without faith in an external God, as Buddha himself never relied on these forces.

As Luis O. Gómez says: “The most common English theological meanings are the ones that have the most questionable similarity to historical Buddhist belief and practice: acceptance of and secure belief in the existence of a personal creator deity (‘belief in’), acceptance of such deity as a unique person with a distinctive name, the unquestioned acceptance of this deity’s will, and the adoption of the articles of dogma believed to express the deity’s will.”

In terms of a creative God who can influence the lives of living beings, it must be true that Buddha and his early followers did not proclaim the necessity of this kind of faith. However, it is not true that Buddhism can be practiced without faith, even if the Buddhist faith is not related to a transcendental being. First of all, it is impossible to practice Buddhism without accepting the law of karma and rebirth. If someone does not believe that his/her deeds have a consequence for this life or even subsequent lives why follow the noble eightfold path of Buddha, why should one meditate, or bother about Buddhist ethics? Of course the law of karma and rebirth can be experienced at an advanced level of meditation, but unfortunately this level cannot be reached by the ordinary practitioner; thus they have to suppose or have faith that Buddhist practice is beneficial for their future. An early Buddhist text is aware of this risk, which the Buddha’s followers must take, but it recommends that followers pursue a moral life because even if karma and rebirth do not exist and they will not enjoy a better life in the future, at least they will be praised by wise people for their meritorious deeds.

In early Buddhism the historical Buddha was not regarded a transcendental being, and in this sense he was different from Jesus, who being the son of God was said to have a transcendental nature. Yet, Buddha’s followers must have had faith in Buddha as an authentic religious teacher and in Buddha’s teaching, which is supposed to help people eliminate

---

672 Harvey 1990: 44.
sufferings and bring happiness. As we saw, even in the early period of Buddhism faith played a crucial role in the process of proselytizing, and with the rise of Mahāyāna faith became an increasingly integral part of Buddhism.

After the nirvāṇa of the Buddha, he gradually became deified and was endowed with transcendental characteristics. Hirakawa Aikra was probably wrong to exaggerate the role of the laity in the stūpa cult, but he rightly pointed out that the service built up around this cult could have been essential in the process of Buddha’s elevation to the transcendental level. The Buddhology evolving out of the newly emerging genre of Buddhist literature of Mahāyāna Buddhism, the Mahāyāna sūtras, provided rich and complex details of Buddha’s transcendency. The Lotus sūtra introduced a paradigmatic change in the concept of the Buddha by claiming that Buddha’s nirvāṇa was only an upāya and that he, in fact, did not go to nirvāṇa; consequently Buddha is ever-abiding, always present, and people can have permanent contact with him. With the nirvāṇa of the Buddha, it seemed that the authentic teachings were no longer accessible, and that their transmission had ended forever. With the appearance of this new teaching, however, transmission could start again, and all the later scriptures attributed to Buddha could become authentic sources of Buddha’s word, the buddhavacana.

All these transcendental qualities - being ever-abiding, eternal, omnipresent, compassionate and so on, - paved the way for Buddha to become an object of faith, in the same way as God becomes the centre of worship in other world religions. It is hard to deny that this concept is in contradiction with the original aim of the founder, who spread the ascetic teaching of curbing desire in order to reach liberation. The art of Gandhāra served the ideal physical objects for the worship of Buddha, who is depicted as an idealised god with perfect harmony and transcendental wisdom.

2. Faith and the Buddhāvataṃsaka-sūtra

The Buddhāvataṃsaka-sūtra, or Buddhāvataṃsaka-sūtra, is said to be the most perfect teaching of the Buddha as it directly reveals the experience of enlightenment that Buddha went through under the bodhi tree. It shows the dharma-dhātu, the realm of reality which is the world of all phenomena but viewed from a spiritual level, that of Buddha. Of

---

673 Hirakawa 1963.
course this world-view is not easy to access, as it presupposes the experience of enlightenment that ordinary people have not realised.

It is not easy to imagine and accept that the whole world can be contained in a single particle of dust as taught in the *Buddhāvatāmsaka-sūtra*. However this world-view resulted from Buddha’s enlightenment, the teaching of the *sūtra* is *Buddhavacana* and thus it must be true. In this case the reader must have faith to acknowledge the statement of the *sūtra* as a valid teaching. The *sūtra* explicitly stresses the importance of this faith:

“Faith is the basis of the path, the mother of virtues,
Nourishing and growing all good ways,
Cutting away the net of doubt,
freeing from the torrent of passion,
Revealing the unsurpassed road of ultimate peace.

信為道元功德母， 長養一切諸善法，
斷除疑網出愛流， 開示涅槃無上道。 674

... Faith can go beyond the pathways of demons, And reveal the unsurpassed road of liberation. Faith is the unspoiled seed of virtue, Faith can grow the seed of enlightenment.” 675

信能超出眾魔路， 示現無上解脫道。
信為功德不壞種， 信能生長菩提樹 676

As the text says, faith is the “basis of the path” as the practitioner is convinced by faith about the meaningful purpose of the practice that is enlightenment or liberation from all sufferings. On the one hand, faith in the *Buddhāvatāmsaka-sūtra* is required to accept the teachings about the Buddha’s realm described in the scripture; on the other hand it is necessary for religious practice. Faith is mentioned as a prerequisite to proceed on the religious path in several chapters of the *sūtra*: it brings about positive results such as eliminating difficulties, or understanding the *Dharma*. Thus faith has a “causative” role. 677
The Bodhisattva Diamond Treasury hesitates to teach about the ten grounds, suspecting that the disciples gathered together do not have the necessary faith to listen to profound teaching. He starts teaching only after he has been assured of the presence of faith in the listeners.  

3. Fifty-two stages

In a detailed study Itō Zuiei showed that the central concept of the sūtra is the cause of enlightenment, the bodhisattva’s activity, the bodhisattva-caryā and the result of the practice, enlightenment. The cause aspect is depicted in the Daśabhūmika-sūtra, and the result aspect is the Tathāgatotpatti-saṁbhava-nirdeśa-sūtra. The two sūtras once circulated independently, but became incorporated into the Buddhāvatamsaka-sūtra. These two chapters might have served as a model for establishing the fifty-two stages which became the stages through which a bodhisattva must pass on the way from initial faith up to final enlightenment. The fifty-two stages include ten stages of faith (shixin 十信), ten abodes (shizhu 十住), ten practices (shixing 十行), ten dedications of merit (shihuixiang 十迴向), ten grounds (shidi 十地), virtual enlightenment (dengjue 等覺, also known as wugou di 無垢地), and marvellous enlightenment (miaojue 妙覺).

However the category of ten faiths does not originate from the Buddhāvatamsaka-sūtra, but can be found in the Sūtra of Benevolent King (Renwang hu guo bore luomiduo jing 仁王護國般若波羅蜜多經) and the Bodhisattvas’ Diadem Primary Activities Sūtra (Pusa yingluo benye jing 菩薩瓔珞本業經). The ten faiths are: 1. the stage of faith (xinxin 信心), 2. the stage of mindfulness (nianxin 念心), 3. the stage of endeavour (jingjin xin 精進心), 4. the stage of mental stability (dingxin 定心), 5. the stage of the wisdom of understanding emptiness (huixin 慧心), 6. the stage of pure self-restraint (jiexin 戒心), 7. the stage of the returning of merit (huixiang xin 迴向心), 8. the stage of maintaining the dharma within faith brings about wisdom. However, Fazang due to the Huayan doctrine of intercontainment, claims that faith must rely on prior understanding. See Vorenkamp 1997: 65-135.

oneself (hufa xin 護法心), 9. the stage of detachment (shexin 捨心), 10. the stage of aspiration (yuanxin 願心).

The founder of the Tiantai school, Zhiyi 智顗 (538-597), when introducing the stages of the bodhisattva in terms of the distinct teaching (biejiao 別教), mentions the fifty-two stages of the Bodhisattvas’ Diadem Primary Activities Sūtra. 684 Although he also mentions that Huayan includes forty-one stages, as Huayan is regarded as distinct teaching, the fifty-two stages became associated with Huayan in Tiantai Buddhism, and Huayan scholars also adopted this view. 685 The concept of ten faiths might have been a Chinese innovation as the two sūtras where this occurs are regarded as apocryphal, which means that they were probably authored in China. 686

It is called “ten faiths”, but in fact all ten members are related to mind or mental state (xin 心) and not to faith (xin 信). It is only the first member, the state of mind of faith, which has a connection with faith; the other members all represent various aspects of religious practice. These ten faiths are not elaborated in the sūtra, but the 12th chapter, Chief in Goodness contains many passages about the importance of faith so this chapter, which precedes the chapters Ten Abodes (15), Ten Practices (21), Ten Dedications (25) and Ten Grounds (26) can be regarded the source for ten faiths. When Chengguan arranges the chapters into assemblies, he states that the ten faiths are taught in the Hall of Universal Light at the second assembly where the chapter Chief in Goodness is preached. 687

4. Faith is complete enlightenment

The bodhisattva path is divided into stages which require various capacities, and the path involves the practitioner’s spiritual evolution as he/she goes through the stages until finally complete enlightenment is reached. By elaborating fifty-two stages the Buddhāvatamsaka-sūtra seems to teach a gradual path, starting from initial faith up to enlightenment. However, this is not so obvious as there is one sentence in the sūtra which seems to imply a different meaning. This sentence with its context runs thus:

684 Miaofa lianhua jing xuanyi 妙法蓮華經玄義, T33, no. 1716: p. 732, a7-14.
686 Another proof for the Chinese origins could be that only Paramārtha’s translation of Vasubandhu’s commentary on the Mahāyāna-samgraha (She dasheng lun 攫大乘論) includes references to ten faiths. See Yoshizu 1992: 274.
687 第二會善光法堂說十信法門, See Da Huayan jing celüe 大華嚴經略疏, T36, no. 1737, p. 702, b6.
“Ten things should also be cultivated: knowledge of what is so and what is not; knowledge of past, present, and future consequences of actions; knowledge of all meditations, liberations, and concentrations; knowledge of superiority and inferiority of faculties; knowledge of all kinds of understandings; knowledge of all kinds of realms; knowledge of where all paths lead; unhindered clairvoyance; unhindered knowledge of past lives, knowledge of the eternal cancellation of habit energy. Contemplating on all these ten powers of the enlightened, in each power are innumerable meanings; one should ask about them, and after having heard about them should arouse a mind of great kindness and compassion and observe sentient beings without abandoning them, reflect on the teaching unceasingly, carry out superlative deeds without seeking rewards, comprehend that objects are like dreams, like illusions, like reflections, like echoes, and like magical productions. If enlightening beings can unite with such contemplations, they will not entertain a dualistic understanding of things; and all enlightening teachings will become evident to them: at the time of their first determination they will immediately attain complete perfect enlightenment, will know all things are the mind’s own nature, and will perfect the body of wisdom and understand without relying on another.”

復應修習十種法。何者為十？所謂：處非處智、過現未來業報智、諸禪解脫三昧智、諸根勝劣智、種種解智、種種界智、一切至處道智、天眼無礙智、宿命無礙智、永斷習氣智。於如來十力，一一觀察；一一力中，有無量義，悉應諮問。聞已，應起大慈悲心，觀察眾生而不捨離；思惟諸法，無有休息；行無上業，不求果報；了知境界如幻如夢，如影如響，亦如變化。若諸菩薩能與如是觀行相應，於諸法中不生二解，一切佛法疾得現前，初發心時即得阿耨多羅三藐三菩提，知一切法即心自性，成就慧身，不由他悟。

The passage says that a bodhisattva should contemplate on the Buddha’s ten powers, arouse a compassionate mind toward living beings, and understand the non-reality of all things. Having attained this non-dual mind, all Buddha’s teachings become clear, and at this initial stage he can have a perfect enlightenment which makes him realise that all things or teachings are none other than the self nature of the mind. The last statement seems to refer to Yogācāra teachings, but Buddhabadra’s translation is different:

“At the time of their first determination they will immediately attain Buddhahood, and understand the real nature of all things.”

688 Cleary 402-403.
689 See Chapter Religious Practice (Fanxing pin梵行品), Da fangguang fo huayan jing 大方廣佛華嚴經, T10, no. 279, p. 88, c21-p. 89, a3.
If we compare these two versions with the Tibetan text, we find that the Tibetan version supports the former Chinese version. It also says that the bodhisattva realises that all dharmas have the nature of mind, and thus can accomplish the wisdom that is not dependent on others.

“He understands the non-dual nature of all dharmas, and by the first determination he will achieve the state of full enlightenment. As he knows all dharmas as the nature of mind, not dependent on any others, he becomes endowed with the embodiment of wisdom.”

5. Enlightenment at the stage of faith in Huayan Buddhism

The second Huayan patriarch, Zhiyan 智儼 (602-668), who inherited the teaching of the Dilun 地論 and Shelun 撮論 schools, realised the importance of the enlightenment at the stage of faith, but laid more emphasis on the gradual path of the ten grounds in Bodhisattva career. It was the third patriarch, Fazang 法藏 (643-712), who claimed that the enlightenment at the stage of faith (xinman cheng fo 信滿成佛) is a unique doctrine of the distinct teaching of one vehicle (biejiao yisheng 別教一乘). He underlined the importance of faith:

“Now, those wishing to enter the dharmadhātu of non-hindrance must awaken penetrating, resolute faith. The reason is that resolute faith is made the basic foundation and the ground for a multitude of practice. All practices are born from resolute faith. Thus resolute faith is listed first and it is made the point of departure.”

690 *Da fangguang fo huayan jing* 大方廣佛華嚴經, T09, no. 278, p. 449, c14-15.
691 Chapter 21 *Tshangs-par spyod-pa*, p. 11. Tog Palace manuscript of Tibetan Kanjur.
693 Unno 1964: 69.
Fazang’s fellow disciple under Zhiyan, the Korean Úisang 義湘 (625-702), might have influenced his views on the importance of enlightenment at the stage of faith. Úisang emphasises that in terms of the perfect teaching of one vehicle a bodhisattva at the initial stage of faith is identical with a Buddha.

“Question: A first stage bodhisattva means a bodhisattva of the [nascent] faith stage. If so, this is the position of the disciple. However, one who has achieved right enlightenment is in the stage of Buddha. This is a great teacher. Superior and inferior are not equal. Positions and stages are also different. Why then are head and feet placed in the same position?

Answer: The dharma and function of the three vehicle law of expedient means and the one vehicle law in the round teaching are different. Both of them should be distinguished without confusion. What is meant by this? In the three vehicle law, head and feet are different. The years and months of an old man and a baby are not the same. Why so? Because it is based on marks. Because of producing the heart of [nascent] faith in the one vehicle round teaching, head and feet are comprehensively one. [Now] the years and months of an old man and a baby are the same. How? Because they are [both] established by causal conditions and based upon universal-principle.”

Fazang regarded the dharma-dhātu dependent arising (fajie yuanqi 法界緣起) as the central concept of the Buddhāvataṁsaka-sūtra. One of the most important Chinese Huayan innovations is the tenet of the ten mysterious gates, which is said to describe the interrelated existence of the dharma-dhātu. The third gate reveals that all dharmas are mutually identified freely (zhufa xiangji zizai 諸法相即自在). Here, Fazang refers to the enlightenment at the stage of faith, saying that after the arousal of the bodhicitta the bodhisattva has limitless merit.

---
694 Huayan you xin fajie ji 華嚴遊心法界記, T45, no. 1877, p. 645, b22-25.
695 Fazang’s friendship with the Korean monk is well attested by his letter to him. See Forte 2000.
697 Hwaǒm ilsǔng pǒpkyedo 華嚴一乘法界圖, T 45, no. 1887A, p. 715, b3-10.
This implies that at the beginning of his spiritual path a bodhisattva already accomplishes all the merits of the subsequent stages.

“All dharman are mutually identified freely. All these above meanings [i.e., the dharman of
dependent origination] are [such that] one is identical with all and all are identical with the one,
and they are perfectly free and unhindered in their interfusion. With reference to common
essence, [one] of itself possesses and includes all dharman. However, the all of these [dharma
“A”] also in themselves are mutually inclusive, because they are repeatedly inexhaustible [in
their interrelations]. However, this inexhaustibility is within the first category. Therefore this
[Avatamsaka] sūtra says, ‘The qualities of a single thought of a bodhisattva who has aroused the
first thought of enlightenment are deep and extensive, without boundaries. The Tathāgata
[himself] could not finish describing them if he took an eon.’ How much more so if [the
bodhisattva] were to possess and cultivate the meritorious practices of the ten perfections
[pāramitā] and ten stages [bhūmi] for boundless, innumerable, immeasurable eons!”

Zhiyan emphasised the gradual path of the Buddhāvatamsaka-sūtra while Fazang advocated enlightenment by accomplishing faith. The fourth patriarch, Chengguan was aware
of this contradiction in the scriptures, and made efforts to interpret the text in such a way that
the obvious contradiction, which is unacceptable in a sacred scripture, becomes resolved.
Fazang, explaining the stages of spiritual path, established two categories: the gradual (cidi
xingbu 次第行布) and mutual interfusion (yuanrong 圓融相攝). Chengguan elaborated
further:

“The sixth is elucidating the stages. It shows the bodhisattvas the practice as the cause of
Buddhahood. To reach the end of a road it must have stages. ‘The great treasure of a sage is his
rank.’ If there is no stage, practice cannot be completed. There are two aspects. The first is
the gradual way, as different stages are established. The second is a way of interfusion, as one
stage includes the other stages. If any of the stages is completed, it leads to Buddhahood. The

first ground says: ‘One ground includes the merits of all grounds’ 703 Faith comprises the ocean of result. ‘At the time of their first determination they will immediately attain Buddhahood.’

However, these two ways are unobstructed. The gradual way is from the perspective of teaching, and the way of interfusion is from the perspective of the function of absolute nature. The phenomena are the phenomena that are identical with nature, thus the gradual way does not obstruct the way of interfusion. The nature is the nature that is identical with the phenomena, thus the way of interfusion does not obstruct the gradual way. The way of interfusion does not obstruct the gradual way, thus one is immeasurable. The gradual way does not obstruct the way of interfusion, thus the immeasurable is one. The immeasurable is one thus the phenomena are interfused in a hidden way. One is immeasurable, thus phenomena are interconnected in innumerable ways.”

Chengguan explains that the stages on the religious path can be viewed from the perspectives of teaching and of the absolute truth. In terms of teaching various stages can be established, thus the fifty-two stages discussed above are depicted as the way of a bodhisattva to enlightenment. However, in terms of the final truth, on the level of tathatā or thusness which is realised by the Buddha in his enlightenment, these stages are interfused. This is the reason why the sūtra also teaches that at the first stage the practitioner is completely enlightened. In addition, these two perspectives do not obstruct each other, thus they can be true at the same time. This is how the vision of endless interconnection is revealed.

6. The four models of cultivation and enlightenment

As we have seen above, on the basis of the Buddhāvataṃsaka-sūtra the Huayan monks attempted to combine initial enlightenment at the level of faith with the final enlightenment at the end of bodhisattva path. However, the new Chinese paradigm of enlightenment, sudden

---

703 The original text of the sūtra says: 住於一地。普攝一切諸地功德, Shijian jingyan pin 世间净眼品. See Da fangguang fo huayan jing 大方广佛华严经, T09, no. 278, p. 395, b25-26.
enlightenment, had become widespread in Chinese religious thinking due to the growing influence of Chan Buddhism. The sudden enlightenment of Chan is not linked to the initial enlightenment at the stage of faith, but occurs due to the realisation of Buddha-nature. The practitioner becomes aware of his/her possession of Buddha nature, and at that moment experiences enlightenment. In this case the question naturally arises: why should one bother about any kind of religious practice once one is enlightened? Chan monks certainly challenged the Indian way of gradual cultivation, but Huayan monks tried to show that cultivation is still necessary even if one experiences sudden enlightenment. The fourth patriarch, Chengguan showed the theoretical context in which gradual practice can be substantiated while the fifth patriarch, Zongmi, who was Chengguan’s disciple and greatly indebted to his master’s works, and at the same time the patriarch of the Heze lineage of Chan Buddhism, argued for the importance of gradual cultivation after sudden enlightenment.

In his commentary on the first chapter of the *Huayan jing*, Chengguan refers to the *Lañkāvatāra-sūtra* where Mahāmati asks how Buddha purges living beings from the manifestations of their minds (zixin xianliu 自心現流).\(^{705}\) Buddha provides four similes for gradual purification and four similes for sudden purification.\(^{706}\) This process of purification is gradual like the ripening of mango fruit, or making pottery, the origination of the world or mastering various skills techniques. However, it is also described as sudden like objects being reflected by a bright mirror, objects being illuminated by the Sun and Moon, the creation of the environment by ālayavijñāna, or the illumination of Buddha’s light. Next, Chengguan further elaborates upon the term “sudden” by setting up four alternatives.

1. Sudden enlightenment followed by gradual cultivation (*dunwu jianxiu* 頓悟漸修): it is as if one can suddenly see a nine-layered platform, but one must go through the different levels before getting on the top of it. One suddenly understands the nature of the mind, realizing that his mind is identical with Buddha, and it includes all dharmas. Then one must collect merits by cultivating various practices. This is from the aspect of initial enlightenment (*jiewu* 解悟).

2. Sudden cultivation followed by gradual enlightenment (*dunxiu jianwu* 頓修漸悟): this is like rubbing a mirror: the mirror is rubbed everywhere at the same time, yet its brightness appears gradually. All practices are cultivated suddenly, but enlightenment is reached gradually. This is from the aspect of final enlightenment (*zhengwu* 證悟).

\(^{705}\) *Da fangguang fo huayan jing suishu yanyi chao* 大方廣佛華嚴經隨疏演義鈔, T36, no. 1736, p. 164, b10-p. 165, a2.
3. Sudden cultivation followed by sudden enlightenment (dunxiu dunwu 頓修頓悟): this is like when silk is cut with a sharp sword and all the fibres are cut simultaneously, or when silk is dyed and the whole piece of silk becomes dyed simultaneously, receiving a colour. All practices are cultivated together and simultaneously enlightenment is bright.

4. Gradual cultivation followed by gradual enlightenment (jianxiu jianwu 漸修漸悟): this is like cutting bamboo gnarl by gnarl.

On first looking at this scheme of the dichotomy of gradual and sudden enlightenment and cultivation we are inclined to conclude that here Chengguan emphasizes the possibility of gradual or sudden enlightenment. However, what he wants to underline is rather the importance of cultivation, be it gradual or sudden. Elsewhere he criticizes those Chan monks who neglect cultivation claiming that “the mirror is originally bright”.707 Chengguan argues that from the aspect of principle we can speak about inherent wisdom, and from the aspect of phenomena we can speak about the wisdom of Buddha. Even if the mirror of mind is originally clear, it is buried by infinite afflictions, and ordinary people have not realized what Buddha has. As principle and phenomena are unobstructed, the pursuit of cultivation is identical with its non-pursuit. This kind of cultivation is non-cultivation (wuxiu 無修), and non-cultivation is the real cultivation (zhenxiu 真修).708

After the translation of the forty-fascicle Huayan jing was completed in 798, by imperial command Chengguan made a commentary on it. By this time, as a leader of the Buddhist community he must have experienced the growing influence of Chan Buddhism. In his New Commentary he responded to the challenges of Chan by including a chapter in his introduction to the commentary. The title of this chapter, which is not found in his earlier commentary, is the discussion of various levels of cultivation and realization (bian xiu zhenqian 辨修證淺深).709 He adopts the famous Chan slogan saying that the teaching of Huayan jing was transmitted from Buddha and then from mind to mind, not relying on writing.

He divides the learning of wisdom (huixue 慧學) into nature and characteristics, and the learning of meditation (dingxue 定學) into gradual and sudden. As in a previous chapter he discussed the ten differences between nature and characteristics,710 he goes on to expound the meaning of gradual and sudden. Under the rubric of gradual he refers to the Northern school

710 For a detailed explanation on the ten differences, see Hamar 2007b.
of Chan, and defines it as observing the mind and cultivating purification (kanxin xiujing 看心修淨). He takes up two models under the term gradual: sudden enlightenment followed by gradual cultivation (dunwu jianxiu 頓悟漸修) and gradual cultivation followed by gradual enlightenment (jianxiu jianwu 漸修漸悟). He describes sudden as direct pointing at the essence of mind or the sudden elimination of verbal expressions. Two models for the sudden way are mentioned: sudden cultivation followed by sudden enlightenment (dunxiu dunwu 頓修頓悟) and non-cultivation followed by non-enlightenment (wuxiu wuwu 無修無悟).

Chengguan claims that though these sudden and gradual methods seem to be different, in fact they are only different paths that lead to the same goal. What is really a crucial question is whether one can obtain meaning (deyi 得意) or not. If one understands the meaning of the teaching then both methods are supreme, but if one loses it then both of them deteriorate.

Next, he explains the object of enlightenment (suowu 所悟), the method of enlightenment (neng wuru fa 能悟入法) and the characteristics of enlightenment (wuxiang 悟相). He describes the object of enlightenment in the following way:

“The object of enlightenment is the following. Some say that the essence of mind is separated from thought, the original nature is pure, and is neither born nor perishes. It is mostly from the aspect of gradual [way]. Some say that the non-abiding, empty and quiescent Tathātā transcends characteristics; or the false is empty and the absolute is existent; or the false is existent and the absolute is empty; or mind is identical with Buddha, and the teaching of Buddha inherently exists [in all living beings]. These [statements] mostly belong to the sudden way. However, as neither of [the sudden and gradual ways] go beyond the nature and characteristics of mind, they can be applied together.”

Despite of the discrepancies between the Northern and Southern schools he underlines that these two stances are not contradictory but rather complementary.712

---

711 Huayan jing xingyuan pin shu 華嚴經行願品疏, X05, no. 227, p. 64, b7-11 // Z 1:7, p. 252, a1-5 // R7, p. 503, a1-5.
Concerning the methods of enlightenment, Chengguan takes up meditation and wisdom. He emphasizes that these two methods should be practiced together, as it is the only correct way.

The last section, the characteristics of enlightenment is the lengthiest section, occupying half of this chapter. At the beginning he states that there are two kinds of characteristics: initial enlightenment (jiëwu 解悟) and final enlightenment (zhengwu 證悟). Initial enlightenment is the clear understanding of nature and characteristics [of the mind] (mingliao xingxiang 明了性相), while final enlightenment is the arrival of mind at the enigmatic supreme (xin zao xuanji 心造玄極). Initial enlightenment must refer to the realization of the inherently pure nature, final enlightenment to complete enlightenment after cultivation. This pair of terms resemble the terms benjue 本覺 and shijue 始覺 from the Awakening of Faith in Mahāyāna.\textsuperscript{713}

Next, a discussion of four models of enlightenment and cultivation is found.

1. Sudden enlightenment followed by gradual cultivation. This is from the aspect of initial enlightenment. After an abrupt understanding of the nature of mind, gradual cultivation leads to unification with it. Enlightenment is like the shining of the moon, as it suddenly makes everything bright. Cultivation is like rubbing the mirror: it becomes clear gradually.

2. Gradual cultivation followed by sudden enlightenment. This is from the aspect of final enlightenment. First it is realized that all objects are only consciousness, then the original purity of mind is seen. Both mind and object become quiescent.

3. Gradual cultivation followed by gradual enlightenment. This also represents final enlightenment. Both cultivation and enlightenment are like climbing a tower: the feet are getting higher and higher and more and more distant vistas come into sight.

4. Sudden cultivation and sudden enlightenment. In our discussion of the previous three models we surmised that the sequence of characters implies a temporal sequence of enlightenment and cultivation. However, in the case of the fourth model Chengguan further specifies the temporal sequence of enlightenment and cultivation, explaining three alternatives. The first is when enlightenment is followed by cultivation (xianwu houxiu 先悟後修), which is initial enlightenment. The second is when practice is followed by

\textsuperscript{713}Dasheng qixin lun 大乘起信論, T32, no. 1666, p. 576, b14-16.
enlightenment, which is final enlightenment. The third is when practice and enlightenment are simultaneous. This includes both initial and final enlightenment.

In the following table I summarize the four models of enlightenment and practice in Chengguan’s Subcommentary and New Commentary.

<table>
<thead>
<tr>

</table>

Three of the four models are identical, but the second row in the table contains different names. As for the terms initial enlightenment and final enlightenment, we can conclude that Chengguan designates as initial enlightenment those cases where enlightenment is not the result of a practice but appears before it, while final enlightenment is preceded by cultivation. Using these terms Chengguan transplanted the terms *benjue* and *shijue* of Awakening of Faith into the context of Chan Buddhism. Thus he could retain the meaning and importance of Buddhist cultivation. His disciple Zongmi 宗密 (780-841), who was not only the patriarch of the Huayan lineage but also a patriarch of the Chan lineage, adopted his master’s scheme and elaborated further on the significance of initial and final enlightenment. He chose the model of sudden enlightenment followed by gradual cultivation as the ideal way for Buddhist practitioners.

7. Li Tongxuan: faith in the identity of sentient beings and buddhas

Fazang and Chengguan represented the scholar monk lineage of Huayan Buddhism that emphasised the scholastic interpretation of the *Buddhāvataṃsaka-sūtra*, and religious practice seems to be only secondary. However, the famous Huayan hermit Li Tongxuan 李通
玄 (635-730), who was worshipped as a saint by the populace even though he was not an
ordained monk, was less scholastic in his writings on the **Buddhāvataṃsaka-sūtra**. Kojima
Taizan tried to prove that Li Tongxuan represented the Wutaishan lineage of the Huayan
school, which stressed religious practice. Although Seunghak Koh disproves Kojima’s
claims, as Li Tongxuan had no close relation with Wutaishan, his Huayan philosophy has
been described as practice-oriented.

The practice that Li Tongxuan suggests is no practice as all sentient beings are
originally enlightened and there is no difference between sacred and ordinary. The absolute
and the ordinary are both real (**zhèn sù jù zhēn** 真俗俱真) in the one true **dharma-dhātu** (**yì
zhēn fājiè** 一真法界). He does not accept the temporal sequence of cause and result, which
would imply an assiduous religious cultivation before attaining buddhahood, but proposes the
simultaneity of cause and effect (**yìnguò tōngshí** 因果同時). While Fazang and Chengguan
stated that due to the mutual unobstruction one level of the bodhisattva path can include all
the other levels, Li Tongxuan claims that the fifty-two stages are only expedient means, and in
reality each level is identical with Buddha, and Buddha is identical with all levels (**zhūwèi zu
dí fó fo ze zhūwèi** 諸位則佛佛則諸位). He says that Mañjuśrī represents the cause, while the
Buddha of immovable wisdom is the result. However, the cause and result are not different in
terms of the essence (**yìnguò tōngtǐ wú èr** 因果同體無二).

On the level of ordinary beings the identity of Buddhas’ realm and sentient beings’
realm is difficult to realize, thus only faith can bridge the gap between the two realms.
Sentient beings must believe that their minds are not different from Buddhas’ minds. As Li
says:

“If they do not believe that their body and the Buddha’s body are non-dual in terms of cause and
effect in the stage of the ten faiths, they cannot establish [firm] faith and understanding.
Therefore it is said in the chapter **The Tathāgata’s Manifestation (Rulai chuxian pin 如來出現品)**,” Bodhisattvas should know that a moment of their own mind contains all buddhas from the
ten directions who attain right enlightenment and turn the wheel of correct **dharma**. Why is it so?

The Buddha’s mind and their minds are non-dual.” Only when you have such faith can it be called faith.”

十信之中若不信自身與佛身因果無二者。不成信解。是故如來出現品云。菩薩摩訶薩應知自心之內一念中有十方諸佛成等正覺轉正法輪。何以故。佛心與自心無二故。如是信心方名信故。

At the stage of the ten faiths, which as we saw comes at the beginning of the fifty-two stages, the practitioner must believe that his mind is not different from the buddhas’ who gathered from the ten directions. Li Tongxuan says that after this faith is born in the practitioner, he will have a vision of the way at the first level of the ten abidings. Traditionally, this vision is produced at the first ground when the mind of enlightenment is created. However, Li stresses that ordinary people can attain buddhahood by seeing their true nature at the first stage of the ten abidings just after they have passed through the levels of ten faiths, and later they only intensify this wisdom.

As we saw above, the traditional list of ten faiths is not actually related to faith very closely, and the Buddhāvatamsaka-sūtra does not include them, but the ten faiths were adopted from other scriptures. Li Tongxuan seems to have been aware of this problem, and he devised a new scheme of ten faiths that underlines the belief in the identity of living beings and buddhas from various aspects. First of all, as the first of ten faiths, ordinary beings regard faith as the most important and decide to attain all the results of buddhahood. Thus ordinary beings at this very initial stage must believe that:

1. the immovable wisdom of the minds of all buddhas of ten directions is not different from their own mind,
2. the fundamental wisdom of the bodies of all buddhas of ten directions and their body are not different,
3. they can execute the Tathāgata’s ten abodes, ten practices, ten dedications and ten grounds,
4. they too can attain the samādhi of which all buddhas of ten directions were born,
5. they can attain all supernatural power (shentong) of all buddhas of the ten directions,
6. they will receive the buddhas’ wisdom,

724 Koh 2011: 42-44.
7. they will receive the buddhas’ compassion, which covers everything,
8. they will receive the buddhas’ freedom,
9. they will go through endless eons of cultivation and reach all levels equal with all buddhas, but they do not move for a moment.

Li Tongxuan explains the reasons why ordinary beings can have these results of buddhahood in the following way:

“In the chapter Chief in Goodness from the stage of ordinary people the faith is regarded as the chief. This is the decision that they will receive the result of Buddha’s great bodhi. Thus from the stage of ordinary people, they believe ‘the immovable wisdom of the minds of all buddhas of ten directions are not different from our own minds. Only due to ignorance are they deluded. Ignorance and the mind of buddhas of ten directions originally are not different.’ From the stage of ordinary people, they believe “the fundamental wisdom of the bodies of all buddhas of ten directions and our bodies are not different. Why? Because they originate from the same fundamental wisdom of the same dharma-nature body (yi faxing shen yi genben zhi 一法性身一根本智). It is similar to the branch of a tree. One root can grow many branches and leaves. Depending on conditions a tree can grow different branches and leaves with different quality.” From the stage of ordinary people, they believe “we can execute the Tathāgata’s ten abodes, ten practices, ten dedications and ten grounds. Why? We remember the ocean of worldly suffering. We had carried out activities that did not benefit anybody. Now, we can carry out activities that benefit others, and the various practices of bodhisattvas can save sentient beings. How could we not perform these?” From the stage of ordinary people, they believe “the samādhi of which all buddhas of ten directions were born they also can attain. Why? The samādhis of all buddhas were born from the upāya of the Tathāgata’s self-nature. We are all endowed with the Tathāgata’s nature with pure self-essence and are equal with buddhas.” From the stage of ordinary people, they believe “we can attain all supernatural power (shentong 神通) of all buddhas of the ten directions. Why? All supernatural power of buddhas can be received on the base of absolute wisdom (zhengzhi 真智). Due to its absolute nature wisdom has no mental disturbances (fannao 煩惱), and our ignorance can become wisdom. All karmas are destroyed, only wisdom and compassion exist, and the supernatural powers are freely manifested to liberate [living beings].” From the stage of ordinary people, they believe “we will receive buddhas’ wisdom. Why? Because all buddhas originate from ordinary beings.” From the stage of ordinary people, they believe “we will receive the buddhas’ compassion that covers everything. Why? Because all buddhas’ compassion originates from the great vow. Like all buddhas we also take the great vow.” From the stage of ordinary people, they believe “we will receive the buddhas’ freedom. Why? Because all buddhas’ wisdom is manifested in the dharmas of nature-origination. The wisdom-body and the dharma-body enter the realms of the living beings. The untainted visible material objects and sense organs function freely. We are also not detached from Tathāgata’s wisdom that manifests its
nature in the world.” From the stage of ordinary people, they believe “we will go through endless eons of cultivation and reach all levels equal with all buddhas, but do not move for a moment. Why? Because the three periods of time [past, present, future] have no time.

故從凡夫地。信十方諸佛心不動智與自心無異故。只為無明所述故。無明與十方諸佛心，本來無二故。從凡夫地信十方諸佛身根本智與自身不異故。何以故皆是一法性身一根本智。猶如樹枝一根生多枝葉等，以因緣故。一樹枝上成壞不同故。從凡夫地信如來十住十行十迴向十地我悉盡能行之。何以故。自始無始時來波流苦海。無益之事尚以行之。何況如今有益之事。菩薩萬行濟眾生事。豈不能為。從凡夫地。信十方諸佛皆從三昧生我亦當得。何以故。其三昧皆從如來性方便生。我亦具有如來體清淨之性與佛平等。從凡夫地信十方諸佛一切神通我亦當得。何以故。諸佛神通依真智而得。我但依真性智中無有煩惱無明成智。一切業亡唯有智慈。通化自在。從凡夫地信佛智慧我亦當得。何以故。一切諸佛悉從凡夫來故。從凡夫地信佛大悲普覆一切我亦當得。何以故。諸佛大悲從大願起。我亦如諸佛發大願故。從凡夫地信佛自在我亦當得。何以故。諸佛自在於性起法門。智身法身入眾生界。不染色塵諸根自在。我亦不離性起如來智故。從凡夫地信自發心經無盡劫修功行滿位齊諸佛。不移一念。何以故。為三世無時故。725

According to Li Tongxuan, faith is not related to any external objects; even buddhas or bodhisattvas cannot be relied on. The aspiration of enlightenment must rely on Buddha’s omniscience (yiqie zhi 一切智), which is the wisdom of no reliance (wusuoyi 無所依).726 Li stresses the importance of immovable wisdom (bu dong zhi 不動智) that is inherent in all living beings. This wisdom is described in the Buddhāvatamsaka-sūtra as a wisdom which is created by faith:

They have removed the webs of doubts of all time
And aroused faith in those who have realized thusness.
By faith they’ve attained immovable wisdom,727
And because their knowledge is pure their understanding is true.728

三世疑網悉已除，於如來所起淨信，
以信得成不動智，智清淨故解真實。729

727 Cleary originally reads immutable knowledge.
729 Da fangguang fo huayan jing 大方廣佛華嚴經, T10, no. 279, p. 92, c22-24.
However, this wisdom can lead living beings to follow delusion but also can cause them to awaken. If this wisdom functions as illusion than this discriminatory aspect is called consciousness, while the awakening aspect is called wisdom. The Yogācāra model of transforming consciousness into wisdom (zhuanshi de zhi 轉識得智) might have inspired Li Tongxuan to propose this tenet. This fundamental wisdom is realised suddenly (dun zheng ben zhi 頓證本智) at the stage of generating bodhicitta.

8. Conclusion

In this chapter we showed the relationship between faith, practice and enlightenment in the Buddhāvataṃsaka-sūtra, and the way in which this problem was addressed in the Huayan school of Chinese Buddhism. The importance of faith in Buddha, bodhisattvas and Buddha’s teaching was emphasised in several chapters of this sūtra as a prerequisite for Buddhist practice. Even though the concept of ten faiths does not originate from the Buddhāvataṃsaka-sūtra, it became an integral part of the Bodhisattva path described in this scripture according to the Chinese understanding. The practice of bodhisattva and the subsequent enlightenment have been described in great detail by the bodhisattvas in the sūtra. Although the majority of this scripture elucidates the traditional gradual cultivation, there is a passage which says that the bodhisattva experiences enlightenment at the beginning of his spiritual path when bodhicitta is generated.

This reference to initial enlightenment had a great impact on the development of East Asian Buddhism. The second patriarch of the Huayan school, Zhiyan, already acknowledged the importance of faith, but it was the third patriarch, Fazang, who ranked the teaching of becoming enlightened by the accomplishment of faith (xinman chengfo 信滿成佛) as the unique tenet of the distinct teaching of one vehicle, which refers exclusively to the Huayan teaching. Chengguan, who had a broad erudition in Buddhist and non-Buddhist literature, attempted to harmonise all the various Buddhist tenets by including them in his commentary and subcommentary on the Buddhāvataṃsaka-sūtra. He proclaimed the nonobstruction of the gradual (cidi xingbu 次第行布) and mutual interfusion (yuanrong 圓融相攝). In terms of teaching a gradual path can be established, but in terms of absolute nature the first stage includes all the other stages.

731 Xin Huayan jing lun 新華嚴經論, T36, no. 1739, p. 752, a27.
As we have seen, the problem of faith, practice and enlightenment was discussed in Huayan Buddhism in the context of the *Buddhāvatāṃsaka-sūtra*. However, the challenge of Chan Buddhism had to be met by the patriarchs of the late Tang period when the sudden enlightenment of Chan Buddhism gained wide currency. Chengguan established the four models of enlightenment and practice. He underlined that after the Buddha-nature is seen a sudden enlightenment can occur, but this does not mean that practice should be abandoned. On the contrary, gradual cultivation should follow the sudden awakening. This model can actually be traced back to the *Buddhāvatāṃsaka-sūtra*, where the bodhisattva experiences awakening at the stage of faith but then goes through all the subsequent stages until he reaches the supreme awakening. Sudden awakening followed by gradual cultivation was advocated by Zongmi, who was much indebted to his master, Chengguan. Even though he was also a patriarch of Chan Buddhism, he retained his belief in the importance of religious practice.

Li Tongxuan’s Huayan teaching is quite different from the lineage known as the “five Huayan patriarchs”. He was a brave innovator who was ready to devise new ideas, and was not held back by previous teachings. He emphasized that initial enlightenment occurs when the practitioner has faith that he is identical with Buddha. He devised a new set of ten faiths which is related to the belief that a sentient being is not different from a Buddha. He explicitly states that belief should not be directed to outside buddhas or bodhisattvas but to the internal identity with buddhas. Li Tongxuan’s idea of faith in the identity with buddhas was discovered by Chan Buddhism in East Asia. His teachings had a great impact on Chinul (1158–1210), the famous Sŏn (Ch'an) master who described initial faith in the identity of living beings with buddha as patriarchal faith.
